How Bank Notes are Redeemed.

"What becomes of old lank note?" is a question saked and answered in graphic detail by a correspondent of the Evening Post.

"When the national bank notes have tramped about the country until they have become registed and answered in graphic detail by a correspondent of the Evening Post."

"When the national bank notes have tramped about the country until they have become registed and varaphond, and have reached the low-gest depths of degredation, they are benoiled upon and sent in the Treasnry Department for received at the Department each year. They have to pass in review through the National Bank Redemption Agency, where those that are utterly depraved and agood for nothing are sentenced to be chewed up, and those that are not expensive. In the place of these that are utterly depraved and good for nothing are sentenced to be chewed up, and those that are not expensive. In the place of these that are condemend, nice have been been dead of the place of these that are condemend, nice have not be get out of them, are sent back into the service. In the place of these that are condemend, nice how notes, crips and clean, are sent out. The experience of these notes is varied, and in sente tasks very novel and interesting; but their raise is told only by their ragged and dirty appearance when they get back to the Department. The average length of time that a new note can keep up a respectable appearance is about three years. Some have been found at the end of twenty years to be as crips an on the day of their issue, but there are compared to the sent of the west, stopping along at the crossroad inne, or life treputs of wind, while the island is overrun by raise, which while the island is overrun by raise, which when the fall in with a bloody fingered but there was a far as twenty miles of medical particular to the company. Bad babits tell on a bank note very quickly. It is hard luck even the place of these grown there. The reason of this is repair on the day o

tion before they can be redeemed. Her name is Fritagerald, and she is said to be very expert, seidom failing to identify a note, giving its proper name, date and classification, no matter haw hadly burnt it is Sometimes packages of several hundred, done up to be expressed, are sent in all stack together and burnt clear through to a black crispy mass. She then separates them one by one with a very thin bladed knife, and places the charred remains of each one separately upon a glass mains of each one separately upon a glass observed examines it very carefully with a agnifying glass. She is familiar with all cultarities of the issues of the various banks, a note must be reduced almost to ashes to

of whom are ladies, can handle just half million notes each day. This is very expert unting. The notes when they come to be dged have first to be 'counted in.' This rees the 'counter in' to go over them twice, she must make no mistake and pass no be as given credit for them when she settles up in the evening, turning in the money, bound, and labeled with her name and the amount on each packages, or any of them are found short, she has to make good the definincy. Next, the notes have to be assorted, those in good condition from those in bad condition; then they have to be grouped as to demonization, under the heads of banks. Then they are 'counted out'. The 'counter out' thrice, but the former has the most responsibility, and must be more extending from the best and most becoming for her. While the creations of the model texponsibility, and must be more extending from the perpetual ice of the unexplored interior to the const and into the sea. The water best and most becoming for her. While the creations of the models have stimulated a taste for the beautiful, they have ministered also to the love of admiration and harmless instinctive vanity appertaining to every fembrack or the street of the end of the sea. The water butys up the sea end of the glacier until it breaks by its own weight with a noise that sounds like loud thunder miles away. They have also created ideals to be great distance. make no mistake, which makes a recount nec-

The Romance of Commerce

It is a curious feature of the warfare of some African tribes that during hostilities their wentern freely visit each others' markets to raxinsing their various products, and then return in safety to their own districts. They do not permit a little blood-spilling to interfere with the interests of commerce. On a much larger scale, the civilized world is exchanging many thousands of dollars' worth of property with certain great tribes that are fanatical enemies of the Caucasian race, and among them only a halt dozen white men have dared to risk their lives.

Some of the finest estrich feathers in the

ently opposed by the native tribes, who with the sid of 40,000 cancels, now monopolize the extensive trade between Morocco and the upsee Niger. These animals bear slowly across the Salara the feathers, ivery, and other products that pass by barter from one trader to mother until they fall at last into European

Many correspondents have of late been recorded to get a what the product of the stars.

If we should mark off on the map of the afety cross the great sand lakes, but by shapng their routes around them, or crossing the

It is a rocky and cliff-girt little isle, with
a solitary mountain a thousand feet high
caring itself from the midst. Weeks and

the Sanny South, notably Florida, recall with pleasure the delights of the perfunc-laden air from a thousand flowers, with the exquisits odor of the erange-blossom predom-

Interfering Horses Many horses are in the habit of striking with one leg against another. Much ingenuity has been exercised to provide a remedy for the Many horses are in the habit of striking with one leg against another. Much ingenuity has been exercised to provide a remedy for the troublesome practice. Both the fore and hind legs are subject to it, the latter perhaps the more frequently; but in them it is conflued to the fetlock joint, whereas in the fore legs the horse may either hit the fetlock, the leg just above the pastern, or just under the knee, where it is called a speedy cut, from its occurring chiefly in fast action. It is desirable, before applying a remedy, to ascertain if possible the cause, and the part which strikes—whether the shee or the toot, and, if the latter, what part of it. Many horses strike from weakness, and cease to do so when they gain strength and condition. This is more particularly the case with young horses, others cut from a faulty conformation of the limbs, which are sometimes too close to each other; again the toe is turned too much out or in. When turned in, the strike is usually just under the knee. The objects to be kept in view in shoeing such horses must be to remedy the faulty action, and to remove if reassible the east which are lacking in the part of its called wing shape, while the virginal is rectangular, and the harpesbard in the tor it is desirable of the shape of a harp. The strings of all three are twanged with little points, untally of the shape of a harp. The strings of all three are twanged with little points, untally of the shape of a harp. The strings of all three are twanged with little points, and the part of its desirable of the shape of a harp. The strings of all three are twanged with little points, and the barysichord, as the name would indicate of the shape of a harp. The strings of all three are twanged with little points, and the barysichord, as the name would indicate of the shape of a harp. The strings of all three are twanged with little points, and the barysichord, as the name would indicate of the shape of a harp. The strings of all three are twanged with little points, and the barysichord,

knee. The objects to be kept in view in shocing such horses must be to remedy the faulty action, and to remeve, if possible, the part which strikes, which is generally that portion of the foot between the toe and the inside quarter—sometimes the inside quarter itself, but very rarely the heels of the shoe. If the horse turns his toe in, in all probability he wears the inside of the shoe most; if so, it should be made much thicker than the outside; if the contrary, the outside heel stould the thicker. The shoe should be levelled off on the inside quarter, which should also be free from nails. In the hind legs we often find a three-quarters shoe will prevent when other and the province of Science some interesting experiments were made on hysterical pa

burns and takes it occasionally in small does. It is an excellent remedy for a sour stomach, and will often cure headache. A small portion, too, dropped into the cavity of an aching teeth will usually stop the pain. It has also great cleansing qualities and will soften water without injuring the hands. I solien water without injuring the hands. I know of nothing better for cleaning white paint or pantry shelves. I once had an old woman staying with me, who did not like cupbeard papers on the shelves. She asked if she might remove them, and when I had occasion to go the cupboard I found the sledves very white. I thought she had accurated them, and women in every quarter of the habitable white. I thought she had scoured them as globe, used to say that thenotion that the female figure was of better proportions and more ply washed them in hot water and soda. Tingraceful outline than that of the male was a delusion. Women did not believe it, averred the great scientist, and men only said so out sods, although baking-powder has supersoded of natural gallantry. The Philadelphia Record says:

Humboldt was right or a great many points concerning which his views were scouted by the wise men of his day, and perhaps he was equally correct in thus attributing superior usually remove fruit stains from the hands, if a smalled investigated in the satural same and the smalled investigated in the new milk. It will usually remove fruit stains from the hands, if

berg turns over and over in the effort to attain its balance, is felt to a great distance along the coast. The natives regard it as the work of evil spirits, and believe that to look upon the glacier in its throes, is death. The Danish officers, when observing the breaking off of the great glacier Pulssortok through their telescopes, were roughly ordered by their Esquiman escort. usually submissive enough, to follow their example and turn their backs on the interesting scene. They had happily com-pleted their observations, and avoided an embarrassing conflict with their crew by a seeming compliance with the order.

A Submarine Boat. The new boat constructed by Mr. Nor denfelt, the inventor of the gun bearing his name, seems destined to solve the proregion and are taken to Timbuctoo to be packed for shipment across the Sahara desert. Several other large towns on the southern edge of the Sahara compete with Timbuctoo in this business, but the feathers from Timbuctoo are considered the finest. It takes about two years to bring these handsome plumes within reach of the ladies whom they adorn, and in their rigang travels from the starting point to the Mediterranean they pass through very little country where a white man would be safe for a minute.

A while ago the French talked of building a railroad across the Sahara to Timbuctoo. Dr. Lenz, the German geologist, who, in the guise of a Mokammedan, was the fifth and last white narine navigation. It he men, and has been operated succ fully at a depth of sixteen feet. She has been run 150 miles on the surface without recoaling, at a maximum speed of eight knots. Although this is comparatively a slow rate of speed the boat is considered a success, and when properly armed is liable to be a dangerous enemy to the hull of hostile vessels.—Exchange.

Popular Science.

A recent earthquake in France affected only the chalk formations at the earth's surface, and was neither heard nor felt by men at work in the coal mines beneath A writer in the Bulletin Generale de The A writer in the baness constraint in the lobe of the ear will stop hiccough, whatever its cause may be. Very slight refri geration, such as a drop of cold water, is to be sufficient.

There is a qualitative test for butter so simple that any housewife can put it into successful practice. A clean piece of white paper is smeared with a little of the suspected butter. The paper is then rolled up and set on fire. If the butter is pure the smell of the burning paper is rather pleasant; but the odor is distinctly tal-lowy if the "butter" is made up wholly

or in part of animal fats. The Union Pharmacentique says that an eminent chemist prepared with great care a mixture of manganese, permanganate of potash and oxalic acid, only to find that the mixture exploded a few minutes after ward in the patient's pocket. It also gives an instance of a tooth powder composed of cachon and chlorate of potash explod ing in the mouth of a person engaged in brushing his teeth

In the British Medical Journal, Dr. Foth ergill says that a patient dying of exhaus-tion is generally dying of starvation, "We give him beef tes, call's foot jelly, alcohol. seltzer, and milk; that is, a small tity of sugar of milk, and some fat. the jelly is the poorest sort of food, and the beef tes a mere stimulant. The popu-lar belief that beef tes contains 'the very strength of the meat' is a terrible error it has no food value."

The best remedy for bleeding at the nose, as given by Dr. Gleason at one of his lectures, is in the vigorous motion of the jaws as if in the act of chewing. In the case of a child a wad of paper should be inserted to chew it hard. or inserted to chew it hard. It is the motion of the jaw that stops the flow of blood. This remedy is so very simple that many will feel inclined to laugh at it, but it has never been known to fail in the severescent.

Several household articles, such glass fish globes, paper weights made of a pyramid of glass balls, and the lenses of stereoscopes, have been found to act as a burning-glass in the sun, and to have set tend to bring out similar consequen It seems that, from a scientific point of view, perfectly clean hands are an impossibility. In the Gazatta Medica Italiana Dr

Forster says that after the most diligent washings and brushings with soap and water and rinsings with carbolic acid and other disinfectants, the hands remained TAILORING IN ALL ITS BRANCHES

Spinets and Harpsichords

Spinet is the name given to a keved instr ment of the sixteenth, seventeenth and eight-conth centuries, which, with other somewhat similar instruments, has developed into our similar instruments, has developed into our modern piano-farte, it differs from the virginal and harpsichard principally by its form being usually of a triangular or (as it is called wing) abane, while the virginal is rectangular, and

the massive columns moved forward into the battle, glows with the true forvor of lighting arder. There is a legend of a battle song so

free from nails. In the hind legs we often find a three-quarters shoe will prevent when efter plans fail, for here the striking part is not so far forward as in the fere legs; so the removal of the iron altogether from the inside quarter will often accomplish the aim. If it happens that no plan will prevent interfering, then the only recourse is the book or the pad.—Indiana Furnar.

Soda

One reads so much of the medical properties of seda that I suppose every one applies seda to burns and takes it occasionally in small tained in phinls or wrapped in paper. tained in phials or wrapped in paper.
