

PERRINEVILLE'S MYSTERY.

HAS DR. WILLIAM T. MACMILLAN BEEN MURDERED?

His Horse and Head Car Found, but No Trace of Him, in the Forest of the North of Westchester County and Apparently of a Head.

DATON, Nov. 1.—All day hunting parties have been searching the roads and woods about Perrineville for some clue to the whereabouts of Dr. William T. Macmillan, who disappeared last Friday night. He was last seen by his family on Friday afternoon at 4 o'clock, when he left his home in Perrineville in a road car for Hightstown, seven miles over a lonely road. He told his wife that he was going to the bank to take up a note, and that he would also buy some drugs and return home that evening. He was also going to collect some bills, he said, and he had a letter to write.

He reached Hightstown early in the afternoon and went to the bank, having put his horse at the hotel kept by Mr. Dwyer. Then, after collecting some bills, he went to Rue's drug store, bought a few drugs, and started for home at 8:45 o'clock.

The man at Dwyer's hotel who got out his horse for him is the last person who is known to have seen him. At 8 1/2 that night a man named Gaven drove to Perrineville in hot haste and asked to see Mrs. Macmillan. He said that he had just come from Milford, about five miles from Perrineville, on the Hightstown road, and that he had seen Dr. Macmillan's horse without the cart, and that further down the road he had found the cart standing in the road and in a broken condition. He had not seen Dr. Macmillan nor could he find any one who had seen him.

Greatly alarmed at this, Mrs. Macmillan, her father, Mr. Allen, and Dr. George Macmillan immediately drove to Milford with lanterns searching the road and calling out in the hope that the doctor might be somewhere within hearing distance and would answer. But they found no trace of him and returned home. The next morning a searching party of forty was organized. They set out at 7 o'clock with the intention of making an exhaustive examination of the roads and surrounding woods on the Hightstown road. Within a mile of Milford they found the horse blanket that had been in Dr. Macmillan's road car, and near it signs of a struggle. The horse was found around, just as they were about to proceed out of the party called excitedly to Mr. Allen: "Look here, there is a man's head."

The others clustered around and there in the dust was the imprint of two hands with fingers outstretched as if they were grasping at something. The imprint was in the dust as of a man's head. After examining these marks the party went on toward Milford.

About half a mile further at a turn in the road near a farmhouse, they found the cart and paint mark and also some scratches on it which had not been there before. The cart, in fact, was in a state of confusion. Inquiries at the house elicited no information. The occupants had been out for some time, but that about 7 o'clock the night before they had heard a horse galloping in the distance. Perrineville, and fifteen minutes later a horse had passed at a gallop in the opposite direction.

Here the searchers separated, some taking the woods on either side of the road, while a few kept on the road as far as the house of Dr. Macmillan's hat about half a mile from where the cart had been found. There were two deep depressions in the road, one on each side, and the horse was found in the middle of the road. It was found that the horse was galloping up behind him. Although I did not know whose it was, I saw it was a runaway, as the reins were loose and the horse was there was no wagon, so I caught it and tied it to a post. It was afterward taken to a road near here.

As there was nothing else found on the road the whole energy of the searchers was turned toward the woods, where they were to find the horse. They were searched until nightfall, but without finding any trace of the missing man. Saturday evening the searchers were told that a horse galloping in the distance, and fully four hundred persons were sent out in every direction from Milford. They drew off all the water from Milford Pond, which is the only body of water near the place.

Yesterday the churches of the district were held, and the searchers were told that a woman and child of Perrineville and Milford, and from other villages was out on the hunt. The searchers were told that the woman and child were seen by a man who returned from the third unavailing quest. Mr. John Macmillan, a brother of the missing man, said that he was sure of one thing, and that was that he had anything to do with it. I don't know. The horse my brother drove was a fast horse and rather ugly.

Two men told me to-day that they met him driving his horse away from the road at 8 o'clock, and they drew aside to give him the road. He was going very fast, they said, and he was driving a horse. We found yesterday that one of the reins was out or broken. We do not know how much more he had to do. He had been just collecting some bills.

The man who told me that he had seen the missing man, said that he was sure of one thing, and that was that he had anything to do with it. I don't know. The horse my brother drove was a fast horse and rather ugly.

Dr. Macmillan is very popular in this region. He graduated from the medical department of Johns Hopkins University in 1890, and he has been settled in Perrineville, where he has always lived. His father, who lives in Ohio, has not yet been informed of his disappearance. Dr. Macmillan's friends say that the search will be continued through the week. Perrineville is a town of about 100 people, and it is nine miles from Hightstown, the nearest railway and telegraph station.

The country about Perrineville is thickly wooded in patches, sparsely populated, and infested, it is said, with double-breasted and triple-breasted deer. The missing man is supposed to have left the road in between two large and dense thickets.

LYNCHED BY THE SECOND BAND.

Larkin Nix Was Killed, and His Body Found in a Cave.

MAKON, Nov. 1.—Two lynching parties were necessary to put Larkin Nix out of the way. For a month Nix has been in hiding. It was not until Friday night that he was found. He was at the home of a relative in Mitchell county.

A mob of men without masks surrounded the house and demanded Nix. His liberal display of firearms brought him out. When the party disappeared it was thought by all that he had come and a search was made of the woods for the body. About dark yesterday evening the body of Nix was found. He was surrounded by a mob of five men. Nix was taken to the jail, and the body was delivered Nix up to the officers.

Some of the men who were with Nix were recognized, and the job was declared off. The town authorities put a guard of five men over the body. They broke down the door and dragged the body out. In about twenty minutes the body was taken to the jail. The body was found in a cave, and the body was found in a cave. The body was found in a cave, and the body was found in a cave.

THE NEW STYLE ELEVATED ROAD.

The Aerial Structure that New Yorkers are Building on Chicago's South Side.

The elevated railroad which is being constructed in Chicago is sufficiently unlike other New York to render a study of interest. The corporation is the Chicago and North Branch Rapid Transit Company. The President is Col. Charles Goddard, the Secretary and Treasurer is John H. Glade, and the Chief Engineer is R. L. Sloan. Col. Goddard will be remembered in New York as that expert whose calculation of the values of the various elevated roads in New York was made the basis of the famous tripartite agreement between the roads. Mr. Sloan, the chief engineer, is also a New Yorker, for years the chief engineer of the Manhattan Company and the man who practically reconstructed our roads when they were obliged to increase the weight of their rails and engines, and to add the number of cars in the train. It will be seen, therefore, that these gentlemen understand the system to which they are adding, and naturally they are making some improvements upon the earlier roads of that pattern; or, rather, are avoiding the mistakes that were made when the first structures pioneered the elevated road.

The Chicago people call their South Side elevated "The Alley L Road," because instead of pursuing a route down any street it follows one of those alleys which in Chicago divide every block, or nearly every block, in the city. Chicago's alleys are the places in which her cars and galleys are stored, and the movement of the delivery of merchandise is made at the backs of the stores and houses. By using a series of alleys forming a straight route it keeps itself out of the way and yet bisects the very heart of the South Side. It has not bought the right of way directly in the alleys, but it has bought the right of way in the alleys, and it has bought the right of way in the alleys, and it has bought the right of way in the alleys.

The first four miles of the route have proven very costly, because they lie in a region that is valuable and thickly built. Chicago building lots on the north side are much longer than 140 and 170 feet in length. It is not possible to build a lot of such a lot does not affect the comfort of the lot, but there are places where the buildings extend the full length of the lot. In fact, the lot is so small that it is not possible to build a lot of such a lot does not affect the comfort of the lot, but there are places where the buildings extend the full length of the lot.

It is estimated that the next four miles will only cost one-fifth of that amount. The reason for this is that the next four miles will only cost one-fifth of that amount. The reason for this is that the next four miles will only cost one-fifth of that amount. The reason for this is that the next four miles will only cost one-fifth of that amount.

HIGH CHURCH RECTOR REASON.

An Innovation in St. Mark's Church Causes a Scene of Confusion.

ORANGE, Nov. 1.—The St. Mark's Church ritualistic excitement was revived to-day. It being the first Sunday after the high celebration of the Communion was held.

The rector, the Rev. Frank B. Reesor, introduced several innovations, such as a leaving the chancel after morning prayer, putting on special eucharistic vestments, and the elevation of the host.

The congregation had been accustomed to the usual service, and the innovations were met with a scene of confusion. The rector, the Rev. Frank B. Reesor, introduced several innovations, such as a leaving the chancel after morning prayer, putting on special eucharistic vestments, and the elevation of the host.

CAPT. HORNER A SUICIDE.

DEAD IN HIS ROOM AT THE VICTORIA WITH A BULLET IN HIS HEAD.

A Former Officer in the English Army and a Friend of Actor Denison, who Killed Himself Last Week at the Hotel Arno.

Capt. Horner, a former English Army officer, who has been in the city several times, was found dead in his room at the Victoria Hotel. He had shot himself in the head with a new 32-calibre revolver. Capt. Horner strolled into the hotel at 5 o'clock yesterday morning, after spending a convivial night with friends. He was somewhat under the influence of liquor. He had the friends good night and went up in the elevator to his room. It was a double room on the Twenty-seventh street side of the hotel in a little alcove, and was separated from all the other rooms in the corridor. The nearest room was more than twenty feet away.

The Captain got to his room and got a lot of newspapers. He left the key on the outside of the door, and bolted the door on the inside. He evidently had read some of the newspapers, and then undressed, and put on new night clothes and got into bed carefully and folded the bed clothing. He put his revolver close to his head and fired. The bullet entered just above the right ear. It was a five-chambered weapon, with all the chambers loaded. His hand fell upon his chest after he fired, beside his left hand.

The suicide was discovered by a porter who had gone to the door at 10 o'clock and got a lot of newspapers. He left the key on the outside of the door, and bolted the door on the inside. He evidently had read some of the newspapers, and then undressed, and put on new night clothes and got into bed carefully and folded the bed clothing. He put his revolver close to his head and fired. The bullet entered just above the right ear. It was a five-chambered weapon, with all the chambers loaded. His hand fell upon his chest after he fired, beside his left hand.

The hotel proprietor called in Policeman Hill, and Deputy Coroner Jenkins gave a permit for the removal of the body to an undertaker in Seventh avenue.

Dr. Jenkins found that the bullet had fractured the skull at the base. Death was instantaneous. A bottle of sulfaonal, a remedy for sleeplessness and nervousness was found. The only papers were a letter of instructions from Reuter's news agency and an English passport.

Reuter's works of the hotel said that Capt. Horner was very well acquainted with Actor A. M. Denison of the Kendal company, who had been in the city for some time. He seemed terribly upset by Denison's suicide, and had asked queries at times since.

He was a native of the British country several years ago, when he was connected with Reuter's. He had been in the city for some time, and was looking up the feasibility of establishing an American branch of the company. He had been in the city for some time, and was looking up the feasibility of establishing an American branch of the company.

JOSEPH THOMSON HOME AGAIN.

The Distinguished African Explorer Tells of His Latest Travels.

Mr. Joseph Thomson, who, next to Stanley and Denham, is the most famous of the living African explorers, has just returned to England after a visit to Lake Bangweulu and Garganzara where the western head streams of the Congo take their rise. He was gone eighteen months, and his mission was to make treaties in favor of the British Government with the natives of the region.

Mr. Thomson is a very conservative and almost pessimistic. His judgment is good, he is not carried away by enthusiasm, and hence his opinion with regard to the country he has explored is of great value. He says that the country is of great value, and hence his opinion with regard to the country he has explored is of great value.

IRRIGATING THOUSANDS OF ACRES.

An Elaborate System of Canals Underway in the Rio Grande Valley.

Some of the projects for irrigating arid lands in the West and the remarkable results of previous irrigation were described and illustrated in TEXAS a few months ago. Since then, at a convention of engineers in Salt Lake City, the subject of irrigation has been discussed in all its branches, but the effect of the convention has been to consider matters pertaining to the reclamation of the arid public lands of the West, and to petition Congress to cede to each State and Territory the arid lands within its borders for purposes of reclamation, for the support of public schools, and for the support of public institutions.

A project that has attracted considerable attention is the construction of an elaborate system of dams and canals in the valley of the Pecos River in the northern part of New Mexico. The river rises northeast of Santa Fe and flows in a southerly direction toward Fort Sumner, N. M., and then a little to the west, where it joins the Rio Grande. It is a mountain stream subject to alternate floods and drought until it reaches Roswell, N. M., whence for a distance of about 100 miles its course is so tortuous that its length is about 250 miles. The lands of the valley between the Pecos and Rio Grande are some of the best of the territory, but the level of the river is so low that the lands are almost entirely barren. Most of the land is covered with grass and mesquite, and the surface of the distribution of water, the natural slopes being sufficient.

The Pecos Valley may be divided, the first in the mountain region northeast of Santa Fe, in the middle of the valley, and the second in the valley of the Rio Grande. The first is a good grass land. The second extends from Roswell, N. M., to the mouth of the Pecos. The third section extends from the mouth of the Pecos to the mouth of the Rio Grande. The third section extends from the mouth of the Pecos to the mouth of the Rio Grande.

IN THE REAL ESTATE FIELD.

What the Political Market is Over, Most Men With Improve.

Business has again been quick. There are no new features, the movement simply having been interrupted by the political campaign. Values are without material changes. Brokers' sales include:

It is reported that the two three-story dwellings, on lot 45x100, 12 and 14 West Fifty-fourth street, have been sold for about \$100,000. The owners were Edward W. Kearney and Thomas F. Barden. Brokers, Bisset & Son.

C. A. Latta & Co. have sold for Robert Frost 225 and 231 West Sixteenth street, two five-story double flats, each 50x100x102, 2, for \$72,000. Brokers, Bisset & Son.

THE STILETTO AGAIN.

Frank Lombardo Found Dead Beside a Fence in Elizabeth.

ELIZABETH, Nov. 1.—Frank Lombardo, an Italian gardener in the employ of the Elizabeth Nursery Company, was found dead beside a fence in Hightstown, this city, at 10 o'clock this morning, with a stab wound in the region of the heart. The body was discovered by a man named Walsh, who was going fishing. He reported the matter to the police, and an hour later Chief Tenny arrested Michael Servi, an Italian organ grinder, who lives with his wife and a monkey at 709 Third avenue. He was looking up, together with his wife, Lombardo, who was a bachelor, aged 30, had apartments in the same house with Servi, and there has been a bitter feud between them. Servi admitted to have Lombardo put out of the house. Quarrels have been going on since Lombardo had several times said to his friends that the organ grinder had threatened to kill him. Lombardo was last seen by a barber's shop where he had been getting shaved and started for home. Chief Tenny, who was on duty at the time, said that he had been able to trace his movements up to that point, where the trail was lost. Servi was known to carry a large stiletto, the blade of which corresponded to the wound on the forehead of the victim. This weapon cannot be found, and the police are searching for it.

Lombardo worked four years for the nursery company, and was spoken of by his employers as a very good worker. He was a native of Italy, and was married to a woman named Maria. He was a native of Italy, and was married to a woman named Maria. He was a native of Italy, and was married to a woman named Maria.
