MINE AND PROSPECT; FURNACE AND MILL

SILVER KING AND THE FEDERAL LEAD THE DAY'S TRADING ON

Indications That an Ultimatum Will Be Reached at an Early Day

A Tribune dispatch from Washington D. C., telling of the sudden departure of President David Kelth of the Silver King Mining company for New York City and Eastern Interest in the message that recalled him at an hour when he was preparing to flag a train for he was preparing to flag a train for Florida, has rekindled interest locally in the story that the Federal Lead company has decided that it can't get along without the matchless holdings of that sovereign of Park City at its belt. A message from the East during the day says the report that President Keith has returned to New York for a final meeting with representatives of Keith has returned to New York for a final meeting with representatives of the big lead company, is quite freely discussed there and that while the principals refuse positively to have the subject given publicity, their negotiations, if successful, will be followed by the biggest transactions ever made in the mines of Utah.

Hon. W. S. McCornick, treasurer of the Silver King, and custodian for the company of a surplus that runs to delirious heights, to whom the dispatch

lirious heights, to whom the dispatch was shown, said that while he had re-ceived nothing recent from the com-pany's president, the message, in his opinion, could have reference to nothopinion, could have reference to noth-ing less than negotiations for the King. An examination of the bonanza made by W. Clayton Miller and Charles Hus-sey, representing the lead company, had been with most favorable results and with that the principals were left to agree upon a price. If he recalled it correctly, pleaded the treasurer of the company, the figure around which they company, the figure around which they were sparring was \$75 a share, or upon basis of \$11.500,000 for the whole. a basis of \$11,509,000 for the whole. In the deal the purchasers have obligated the King's representatives to deliver the control, at least, while on the other hand the Federal Lead company has obligated itself to accept any and all additional offerings at these figures. What the status of negotiations at this time is Treasurer McCornick says he has no knowledge whatever, although he is prepared to believe that the lead company is urging an ultimatum before he departure of President Keith for

AN INSTRUCTIVE LESSON ON ORES FROM NEVADA

The mineral exhibit from Good Springs and Sanday, along the pathway of the San Pedro railway, which appeared in the show windows of J. P. Gardner yesterday and for which the collection was brought up from the camps by W. H. Wilson, representing the Frederick Warde Mining company, afforded a most instructive lesson on the ores with which the region is en-dowed, while demonstrating the re-sources along the line of "the Salt Lake route." Silver and lead, copper and gold, as they occur in the camps, are each present in great abundance, and while the camps, remote from trans-portation, have not been very produc-tive, it is simply, said Mr. Wilson, that the miner declined to make the sacri-fices incurred by the long haul to a smelter. It is in the same region that the Monarch lead mines, the value of which was fixed by Aller G. Campbell. which was fixed by Allan G Campbell, in his "last will and testament," at \$290,000, is located, and that promise to pass into new hands under an option me time ago awarded by the estate that show from \$140 to \$12,000 gold per ton, the mill on that proposition having been hung up because of its inefficiency, while the big concentrator at Good Springs, which was sold to a customer from Washington, it to be rehabilitated and put in commission during the year. The samples of ore from the Frederick Warde group speak most persuasively for themselves, the samples showing high percentages in lead, with fine values in silver and some gold, while the from which occurs in the locality af-ford evidences of a smelter site, of which some one must ultimately avail himself. Mr. Wilson is most enthusias-tic over the region, to which he will return in a short time to dispatch work on the Warde group. There are reasons to believe that smelter furnaces will be located at Good Springs before the expiration of another year.

RICH COPPER ORES IN THE ADLAIDE GROUP

Not a little exultant over latest developments in the properties of the Glasgow and Western Exploration company, Otto Stalmann, its general manager, came in from the Nevada camps yesterday to forward the result of his observations across the water. At the Adiatde group out of Golconda, Manager Stalmann reports the appearance of ores that have been followed on their strike for over 100 feet, which show an average of 12.5 por cent copper, with 9 ounces silver and \$1.50 gold per ton. The extent of this has not yet been determined, said Mr. Stalmann, but the splendid quality of the ore provides a most desirable leavening. At Copper canyon and Cherry creek the blocking out of wealth also goes forward steadily, while a most agreeable premonition of resumption at the company's smelter in Golconda, work on its electrical equipment has been begun and will be rushed forward to the earliest possible completion. With plenty of water and Superintendent Perron adding hourly to the ore bodies, the season opens as the most assuring in the history of the undertaking. ward the result of his observations across

is occurring at intervals. The inhabitants of the camp are relying on an active seal son over there.

THE MINING EXCHANGE

The day's business on the mining ex

change was confined to 12,635 shares stock, that brought \$3778.12, the signifi-cance of the painful exhibit not so much to the discredit of the shopkeeper and his wares, perhaps, as to the customer and his credit, for it is quite generally recoghis credit, for it is quite generally recognized that "another" bottom has been reached. The trading at the opening session was confined to a single lot of Uncle Sam, for which \$9 was rattied on the counter. That was all. There might have been more active trading had not the shopkeeper reserved "the right to reject any and all bids," and that orders were not more freely executed is the first substantial information, maybe, that "the" bottom on which the investor has been waiting has been reached. Along these lines Con. Mercur was marked up to 63 cents, while the amount of Daly West to be had around \$84.20 was limited. A bid of \$4.50 for Daly-Judge was contemptuously rejected, with the salesmen refusing to put a price on it either in the pit or on the open bourd, while but 300 Yankee Con. was to be coaxed out at 444, cents. Grand Central reappeared as an offering at \$3.50, but only that certain interests appear to be making clandestine effort to increase their holdings, while its neighbor. Lower Mammoth, held out for \$1.50, as 16 cents was shaken valuly under its nose. Indeed, it was the buyer by whom the weakness was betrayed this time, and with the shopkeepers adhering to the policy which was yesterday outlined, the market cannot but improve. The day closed on the following quotations. nized that "another" bottom has been quotations

Boston Copper Market.

Special to The Tribune. Special to The Tribune.

BOSTON, Mass., March 2.—There is no change in the local copper situation. Trading is very quiet and prices fairly strong. The opening was fractionally better than last night's close, and those quotations were fairly well maintained throughout the day. There is no pressure to be seen, while on the other hand the demand appears to be inproving.

a few hours with John Gray. The former captain of the Sait Lake police force says that while he has, like others, experienced some disappointments in the north, the deal now in progress promises to permit of his return to Zion with the fortune of which he has long dreamed. At San Francisco Mr. Lynch met a number of Sait Lakers, drank freely of tha sunshine along the coast and returns visibly improved by the outing.

SALT LAKE TALENT VIEWING GOLDFIELD

GOLDFIELD, Nev., March 3 .- A dis-GOLDFIELD, Nev. March 3.-A distinguished party of Salt Lake mining men and capitalists are in Goldfield and are making a careful and complete examination of its mineral tesources. The party consists of J. R. Walker, Jr. J. B. Thompson, Charles E. Hudson, Frank B. Cook, V. P. Strange and Arthur Hudson. The party had read considerably of Goldfield's riches in The Tribune and while believing they were coming to a good camp. party had read considerably of Golddeld's riches in The Tribune and while believing they were coming to a good camp,
they were not prepared to find things better than had been stated in the press reports. For instance, the writer has usually put it that the best ore went "over
300 per ton," The toturns from the last
carload were received this week and show
that the entire car went over \$50 to the
ten. While these Sait Lake gentlemen
might think it necessary to discount figures in press reports to allow for overenthusiasm, they know that there is no
need of doing so with smeller returns.

J. B. Thompson, who is well known to
the mining fraternity of the West, said
he was very willing to be quoted as being
enthusiastic over the present showing at
Goldfield and its promise for the future.
Said he: "A mining man of experience is
usually skeptical of new mining camps,
especially if there is anything in the nature of a boom on. Things seldom come
up to his expectations unless many disappointments have taught him to keep his
expectations within about a quarter of
what he has heard. But here we find
things better than we believed. Not only
has there been wonderful results from the
development to date, but the mineral belt
is very extensive and the surface showing
warrants the belief that many good mines
will be opened up."

A great deal of pleasure is expressed in

The engine and holst have been installed on the Combination and are now in working order. This will enable the operators to materially increase the production from this bonanza. That the recent shipment which went \$550 to the ton will not be the banner one from the Combination seems probable from the assays taken this week from the shaft. An average of this week from the shaft. An average of a number of assays showed values of fisso per ton. How much of this ore there is has not been determined, but it is believed there is quite a good body of it.

Harry Ramsey, who owned one-half the Combination at the time it was bonded and who has very extensive interests in the district has instructed from a two Harry Ramsey, who owned one-half the Combination at the time it was bonded and who has very extensive interests in the district, has just returned from a two months' visit in California. Mr. Ramsey is greatly pleased over the wonderful showing made sinck he left, and though he let the Combination go for a song, his other holdings here opens him to the suspicion of soon becoming a millionaire. He says that Goldheld is all the talk in California and if one-half the people, who have said they would, come here, there will be the biggest kind of a boom.

The lease of Kendall, Jones and Patrick on the January is dividing honors with the Combination in the estimation of visitors to Goldfield. The big pile of mill ore on the dump and the rich ore in the sacks, where a month ago nothing but sage-brush and sand could be seen, elicits many expressions of surprise from those who see it for the first time. The 50 tons of ore which were shipped from this lease during the week will go better than \$250 per ton.

T. L. Oddie of the Tonopah Mining company has made the first payment on a bond of 180000 at Dr. White Wolf and as-

pany has made the first payment on a bond of \$160,000 to Dr. White Wolf and asbond of \$100,000 to Dr. White Wolf and as-sociates for a group of eight claims close to the Combination and January. He has put eighteen nen to work and is sinking on the White Rock claim, where he ex-pects to get the extension of the rich ledge which is being worked on the Jan-

ledge which is being worked on the January.

The Goldfield Townsite company is to be incorporated with Harry Ramsey, president; Louis S. Finnegan, scoretary and townsite agent, and Elmer J. Chute, vice-president and treasurer. They will at once begin the erection of a \$10,00 hotel for while a number of lodging-houses have been built in the last month, yet the demand for rooms and beds is much greater than the supply.

SALT LAKE CITY'S NEW HOTEL THE KENYON.

NEW GOLD LEDGE

Disclosure in Bonanza That Promises to Double the Value of Its Assets.

The management of the Annie Laurie mines at Gold Mountain is now employed in the development of a newly discovered ledge running parallel with the original which promises to double the value of its assets, said Willard F. Snyder on his reappearance at the offlees of the Western Exploration company yesterday morning, and with these assurances from expert sources the own-ers are not to be reproached for termi-nating all negotiations with at least two formidable syndicates that have been seeking the properties. Certainly Mr. Snyder has philosophically resigned himself to the order withdrawing the bonamed from the market, for, as a share-holder, he realizes that he would have been required to have shared the sac-rifice had the discovery of a new chan-nel of wealth as liberally indorsed as the original been delayed until after a sale had been consummated. The new ledge, said Mr. Snyder, who took the Annie to the company by which it is now owned, before anything like its present pro-portions were attained, was broken into brough a cross-out on the 200-foot level. through a cross-out on the 300-foot level, this avenue passing through a stratum of country rock that has long obscured it. Since then the management has added to the pile of wealth as work has advanced in the new ledge, and there is at this time nothing to indicate other than that it will be made as productive as that upon which the company is now.

drawing for 50-cent dividends each month. While orders for a smelter with which the Exploration company's Balakiala group of mines in Shasta county, Cali-fornia, have not been placed, the owners are simply waiting on a verification of a report recently forwarded to the East. On this there is no uneasiness, however, and it is very likely that the order for furnaces will be placed before the year

as that upon which the company is now

much older. While conditions generally in the East. said Mr. Snyder, have felt the effect of a badly demoralized market for secur-ties, he found the usual number ready to embrace golden opportunities and returns much pleased with the esteem in which Utah is held in New York, Bos-ton, Chicago and other localities.

THE HONERINE MILL IN ACTIVE COMMISSION

is very extensive and the surface showing warrants the belief that many good mines will be opened up."

A great deal of pleasure is expressed in camp over the fact that Serator Kearns and David Keith of Salt Lake have taken hold here. They have bonded for \$20,000, a group of four claims on Columbia mountain, and from the surface showing it is believed they will make a mine.

The Goldfield-Vindicator company, which was recently organized by William H. Tibbals of Salt Lake, has put men to work on their property. This group lies between the Combination and Diampondfield, being about one mile west of the properties of Keens, McMahon and Fletcher, and Haney and Clark, which have a fine showing. A good strong ledge goes through the ground of the Goldfield-Vindicator company, and as good values have been obtained from the surface croppings, they have reasonable basis for the belief that development will soon open a pay mine. On the Black Butto claims, a little over a mile cast of the Vindicator, Frank labelieves he has a mountain of ore. One of the ledges on these claims is 40 to 50 feet wide, and while the rock did not look very promising assays show that it goes from \$13 to \$100 per ton. Mr. Ish has determined to give it a thorough prospecting and soon and out just how big is his find. Ben Peariman, one of the pioneers of Nevada, has taken a bond on a group of four claims from "Diamondfield Jack" Davis and associates. This group adjoins the Red Butte, which is under bond to T. L. Oddie and associates.

The engine and holst have been installed on the Combination and are now in working order. This will enable the operators to materially increase the production of first-class ofe to go direct to the furnaces will not begin, of course, until the tunnel has been advanced to a connection with the main ore-bearing channels, the editivery of ores to the mill meantime to be by wagon. Super-intended to give it a thorough prospecting and concentrating of order to the furnaces will not begin, of course, until the tunnel has bee their work most eagerly.

STUDYING THE METHODS OF WESTERN SMELTING

James B. Herreshoff of the Nichols Chemical company, whose furnaces at Laurel Hill, New York, are among the most prominent in the country, leaves for the East today after studying methods and devices employed at the valley smelters, through which he has been shown by Harris K. Masters. With the methods here and results achieved, the visitor has been most favorably impressed, the economic features of smelting in Utah equaling that of any on earth. Mr. Herequaling that of any on earth. Mr. Her-reshoff, in his pilgrimage, has visited nearly all the smelter centers of the West and South, and leaves feeling that he has been immeasurably instructed.

OLD MAMMOTH OUT FOR A NEW CONTRACT

For the output of the Mammoth company's Tintic properties, which is fixed at 100 tons a day for a year at least, the management is calling on the local smelters for a bid that will justify it in making a contract. The ability of the mine to supply the furnaces with this volume of ore for a year at least will be a most agreeable revelation to those who have been under the impres-sion that its resources had been perma-nently improved bed. nently impoverished. Not so with Manager McIntyre, however, who has fol-lowed the property through nine of its lives and who is ready to wager a portion of his allotted years that there are as many more of productiveness. Each of the smelters have promised him a bid and a contract will probably be awarded the present week.

NEW WEALTH OF THE JOHNNY MINES

Special to The Tribune.

MODENA, March 3.-B. C. McDenald, top foreman of the Johnny mine at Manager Ernest Bamberger on the eve of the latter's departure for Oregon, reports an average of 400 tons of ore coming daily from the bonanza, of which volume 150 tons comes direct to the valley furances, the remainder passing into the bins of the concentrator. At camp there are reports of more favorable conditions at the Judge, says Mr. Kirby, while in the system of filling devices at the Little Bell some ore Stateline, has left for Salt Lake City

ble bonanza, especially when it is con-sidered that fifty feet of ore has new been crossed up from the 300-foot level, ranging from \$37 to over \$300 per ton. ranging from \$37 to over \$300 per ton.

R. W. Brady of Salt Lake City passed through here Tuesday on his return from his recently acquired holding near Ploche. He was accompanied by a seventy-five pound specimen of Galena copper ore which should prove a revelation to the mining talen of Salt Lake City. Mr. Brady is proud of the fact that he rained this particular piece him. that he mined this particular piece him-self from a solid vein four feet in width and therefore knows that it was not placed there by accident or design. He also had a sack of very high grade selected silver and lead specimens from the same properties. It is confidently asserted and believed that the Welland claims, as the property is mamed, are on the famous Ely and Raymond vein, which in former years was the producer of millions, that spread the fame of Pioche to the uttermost corners of the

Judge J. W. Burton has remained on the ground and will return to Salt Lake

the ground and will return to Sait Lake city in a few days with the consignment of specimens No. 2.

On Sunday last about fifty citizens of Pioche entered the shaft of the above-mentioned property and no find in recent years has so excited the residents of that pince as have the disclosures of ore made in the thirty-eight-foot single or the property. Shipmans will begin on this property. Shipments will begin within a few days, said Mr. Brady.

SCATTERING OF COPPER COMPANY'S OFFICIALS

The officials of the Utah Copper company, who have been waiting on the new plant in Bingham canyon to begin the active concentration of ore, which event has been delayed by misfortunes on the Copper Belt rallway, have scattered, Messra. Hawkins, Gillespie and Cobb leaving yesterday, while Presi-dent Charles M. MacNelli and Treesur-er Spencer Penrose will follow today. The latter will return about two weeks down to its work and before which time the active production of concentrates will have begun. With the manner in which developments have progressed and the average maintained by the ores the officers are very much pleased.

Ore in Red Elephant.

"Vic Traver says that they struck ore in the Red Elephant mine last Thursday; that the old disused ore bit was repaired immediately, and that since Sunday the ore extracted has been saved," says the Times of Hailey, Ids. "W. G. Page, superintendent and part owner of the Red Elephant, while not denying that ore was cut into, deprecates any public statement until he has had an opportunity to test its extent and value." The Red Elephant, which is owned by Arthur Brown of this city, is being opened up under an option by Messrs, Rice, Farrell and others of Sult Lake.

Rich Rock in Rosetta.

William Teasdale and William Kruse William Teasdale and William Kruse got in yesterday from the Rosetta mines, says the Halley (16a.) Times. The workings in the Rosetta have shown steady improvement all winter, Mr. Teasdale says. In the lower tunnel, at a depth of 20 feet, the ore vein, which was somewhat broken at first, is now uniform and solid, and the ore for over 160 feet is wider than the drift. How wide it is Mr. Teasdale cannot say, nor how rich, as the samples taken were sent to the office in New York. But this much is assured, and that is that the showing in the mines of the Rosetta District Development company is much better than anything ever seen there.

Mining Notes

A car of ore from the Tonopah com any's Nevada mines reached the smelle John Brooks, superintendent of the Ohio ompany's mill at Bingham, is in from amp again.

C. A. Molson of the London Exploration ompany has returned after an absence of ome days in the diggings. A daily mail service between the valley and Alta will be inaugurated on Tuesday next. The boom is sprouting.

Ernest Bamberger left for the Gold Ridge mines out of Baker City, Or., last right, to inquire into conditions there.

Managing Director Holden of the United States Mining company has returned from its Bingham mines, much pleased with conditions throughout.

Preparations are being made to start he mill on the Midas company's Deep Creek properties, where a large tennage of gold ore awaits it. M. M. Johnson, manager of the New-iouse mines, has returned from Central My, Colo., where Mr. Newhouse is operaing gold-bearing properties, the output of

which is being temporarily forwarded to a custom mill. Mr. Johnson reports the old camp very active at present. P. H. Buhl of the Honorine and Annie Laurie came in from his home at Sharon, Pa., Wednesday night and leaves for Buhl, out of Stockton, today.

Robert Brady of the San Pedro has re-turned after an inspection of the Pioche-Nevada Con, company's interests at Pioche, much pleased with conditions there.

President William Bayly of the Copper Belt railway will arrive in the city next week. In a letter he reports the Gold Roads mines in Arizona giving splendid account of themselves.

Record It.

When the Century Owl has laid its eggs and their young shall have died of old age, it will still be on our records, if he don't pay. Merchants' Protective Association, scientific collectors of bad debts. Top floor Commercial block. Francis G. Luke, General Manager. "Some people don't like us."

Safety

All trains are examined at every division station-that is, at intervals of a hundred

When you hear the hammer ring or see the flare of the torches, you know what is taking place-your train is being "looked over."

In this matter of examining equipmentfrequently and thoroughly-the Burlington is, perhaps, a little more systematic than any other railroad. The reason is-IT PAYS.

To Omaha and Chicago, leave Denver 4:15 p. m. and 10:35 p. m.; to Kansas City and St. Louis 2:00 p. m. and 10:35 p. m.
