Mines and Prospects--Furnaces and Mills

False Reports From Bull Frog District

Rich Strike in the Ralston Desert Proves to Be Without Foundation.

Special to The Tribune.

RENO, Nev., Oct. 9.—Reports which have been coming in of rich strikes in the Bull Frog district, which lies 112 miles by trail south of Goldfield, in the southwestern neck of the Ralston desert and at the head of Amargosa desert, have been greatly overestimated, and have been the means of causing a stampede of miners which may end seriously.

The country surrounding the territory of the reported strike is one of the most desolate to be found in the entire West, and in some respects is more dreaded than the famous Death valley of California. Water is extremely scarce, the nearest spring being three miles distant, and this is so impregnated with alkali, borax and mineral as to be unpalatable for man, and animals, even when suffering from extreme thirst, refuse it.

The mineral deposits of which so much has been said are entirely on the surface and are the result of blowouts, which have left the mineral scattered in small pockets of no great value. There are no defined ledges, and what little mineral has been found is in such small quantities as to prohibit profitable work. Development demonstrates that at no point does the ore go downward, and experienced miners who have visited the region pronounce it as unworkable.

These facts were gleaned from mining men who have just returned from an extended trip through this region, and who have examined all of the alleged strikes that have been made within the past seven weeks. They advise miners and prospectors to stay away, as food supplies cannot be secured excepting at Goldfield and Lida, the former more than 100 and the latter forty miles distant. Everything has to be packed in at large expense. In the reports sent out, the statement has been made that twenty men were engaged in mining and that more were coming in daily. The truth is that but two prospectors were at work, and these were dissatisfied and would soon leave. Another report is that a townsite had been located and the sale of building lots begun. This is a fabrication, as no town could exist in that region, and not a stick of timber is within nearly 100 miles of the spot.

With the foolhardiness which follows all reported rich strikes, scores of miners have started for the new fields from Tonopah, Goldfield and other camps on the north, and from Arizona and California on the south and west, coming by way of Death valley and crossing the Grapevine mountains, which lie some twelve miles to the westward. These latter will fare badly, and it is for them that grave fears are entertained.

Senator Frank J. Cannon will speak at the county mass convention of the American party Monday afternoon. Salt Lake theater.

TWO IMPORTANT EVENTS.

Strike on Tonopah Club and Opening of Shipping on the Val Verde.

Special to The Tribune.

SODAVILLE, Nev., Oct. 9.—The strike on the Tonopah Club and the opening up of three feet of shipping ore on the Val Verde of the Jumbo Extension constitute the two most important events in the development of the mining properties of the Goldfield district during the past week.

The former astonishes mining men of vast experience because of the unusual character of the formation, which is entirely different from anything heretofore opened up in the district. The presence of high silver values is another exceptional occurrence. So far fourteen feet of ore has been cut through, and neither wall is in sight. Assays continue to run high. The ore has been described as an igneous conglomerate, having something of the appearance of shale. With depth it is conjectured that a more defined rock will be found, most likely solid quartz. A shaft is to be put down on the lead to thoroughly exploit the ore body.

The east drift on the Quartzite continues to show remarkably rich ore. An assay taken yesterday from across the rich streak gave returns of $10,764.80. Another shipment of several carloads will be sent out next from ore that is extracted in doing development work.

The Black Butte is showing up exceedingly well under the extensive plan of development prosecuted by the company, and the property is now classed as a big mine. Ore has been opened up on five different places in the upper tunnel, where a big body of milling ore is showing in three ledges that have been cut by the working tunnel, and in a new shaft that has been started on the extension of the Quartzite lead. Good values are found in the shaft.

If you don't know who the registration officer is of your district or where to find the place, apply at headquarters of the American party, Atlas Block, Bell 'Phone, 444; Independent, 2788.

WHITE KNOB COPPER.

Reorganization Will Follow Appointment of Receiver.

The White Knob Copper company, of which W. K. Mathews of Mathews & Co. was Friday appointed a receiver, is a New Jersey corporation, incorporated in 1900, and owning a mine and smelter at Mackay, Ida. The company has outstanding $500,000 6 per cent debentures due 1913, and has borrowed quite largely on the balance of the authorized issue of $1,000,000 debentures. The capital stock outstanding is 200,000 shares, par $10. These shares have been traded in on the New York curb for the past two or three years and have declined from up in the twenties down to $2 a share, Friday's close.

The company has been turning out at the rate of between 400,000 to 500,000 pounds of copper per month, but has not succeeded in obtaining enough copper from its ores to allow of a profit. The present production is taken entirely from a tunnel on the 700-foot level. For some time past construction has been actively under way on a tunnel at the 1000-foot level. The expectation of the company is that copper ore may be found on this level of quality such as will show a profit on the company's production. The smelter is expected to start up some time the middle of October.

The company has no money. After the money borrowed on the security of the bonds had been spent on development work and the new tunnel the largest holders advanced money from time to time to meet the company's needs. Over $1,500,000 was advanced in this way. There is no money on hand now and these parties decline to advance further sums. Hence the appointment of Mr. Mathews as receiver. A reorganization will shortly follow.—Wall Street News.

The American party's county ticket will surely win if every supporter will register on Tuesday or Wednesday.

Hopes to Rival Goldfield Camp

Gold Crater Mining District Attracts Considerable Attention From Miners.

This new district, about twenty-six miles a little south of east of Goldfield, attracted a great deal of attention in the mining world the last week, and several groups of claims have been sold.

Ridge & Curtis purchased a group of claims and in a twelve-foot hole, taking an average sample from top to bottom and across, obtained an assay of $171, according to the Reno Gazette.

The Inman and Sanders strike runs from $250 to $700.

The Elliott, Williams & Colburn property shows a fine lead that runs from $70 to $140.

There is another strike about seven miles east of Gold Crater that runs as high as any found in Gold Crater.

R. W. Griswold and associates have purchased a group of claims.

The formation is the same as the Goldfield district and is bounded on the west by a lava cropping. Porphyry mountains dot the plains, and in these are found the quartz ledges. Some of the ore resembles the Goldfield ore, and some looks like the typical California quartz. The same mineral zone extends to the east of Stonewall mountain and continues a great distance southeasterly from Gold Crater.

American party voters, avoid the rush by registering early on Tuesday and Wednesday.

VIRGINIA'S BIG VALUES.

Twenty-Four-Inch Vein Averages $2700 a Ton.

W. A. Byers has recently returned from Lemhi county, where he is managing the mine and mill of the Virginia Mining company. The property consists of thirteen claims, covering 15,000 feet of the ledge. Three thousand feet of work has been done. The drift on the 600-foot level is being run on a twelve-inch pay streak which averages $355 in gold. On the 100-foot level the ore is twenty-four inches thick and assays $2700 a ton for the full width. In another place there is six feet of solid ore running $10 to the ton.

The proposition calls for some concentration, but works nicely in the three-stamp mill. Three thousand feet of development work has been done and the mine is amply equipped with track, cars and tramway.

News Budget From Goldfield

Many Mines in the New El Dorado Are Making Rapid Progress and Development.

Goldfield continues to be productive of reports of rich strikes and rapid development. One of the strongest mining companies which has recently been formed is the C. O. D. Mining company, which owns the C. O. D., Zoe and Golden Eagle claims, says the Reno Gazette. Not only are the claims very valuable, but the company is composed principally of pioneers of the district of the highest standing.

Active development work is about to be commenced on the ground of the Goldfield Diamond Mining company. Several leasers have been prospecting the ground with a view to leasing. M. R. King and T. L. Hoppin of California obtained $45.60 from across a four-foot ledge at seven feet depth on the Head Center claim, and at once secured a twelve-months' lease and will begin active work.

The Daisy Mining company, owning the Daisy Nos. 1, 2 and 3, near Diamondfield, has been incorporated under the laws of Arizona with a capitalization of $1,500,000.

Under the direction of Supt. McKay, the Goldfield Mining company has started development work on the September, October, St. Paul, Henry Clay and Cracker Jack claims. Some people have the notion that this company owns only the January claim, but it owns the above-named claims also. They are among the most valuable, prospectively, in the camp, and the development work now going on will possibly show up another big bonanza.

Capt. John A. Hassell, Marshall Bond and Louis Bond have bought the St. Ives claim from Lockhart & Williams and incorporated the St. Ives Gold Mining and Milling company to operate the same. Capt. Hassell is president of the company, Marshall Bond vice-president, and Louis Bond secretary and treasurer. The St. Ives promises to make one of the big mines of the Goldfield district. It is understood that Col. Lockhart retains an interest in the company.

A big parallel ledge has been struck in the 150-foot level of the Combination at a point about 300 feet west of the shaft. The ore where encountered is not rich enough to ship, but higher grade ore may be found in drifting.

FITCH COMING TO SALT LAKE

Great Advancement by One of America's Best-Known Mining Experts.

Special to The Tribune.

ISHPEMING, Mich., Oct. 9.—Walter Fitch, one of the best-known mining men in the Lake Superior region, has accepted the general management of the mines and smelters of the United States Mining company, one of the largest corporations of its kind in America, and is about to remove to Salt Lake City to assume his new duties.

For more than thirty years Mr. Fitch has been a resident of Marquette county and for twenty years he has been located at Champion, where for an extended interval he has been superintendent of the big Champion iron mine, acquired by the steel corporations several months ago, and long pointed to as a model property of the kind.

He is president of the board of control of the Michigan college of mines at Houghton.

Mr. Fitch is a self-made man. He was employed as a common miner on first coming to the Lake Superior region from England, and from that station he long ago attained high ranks in the mining profession. The United States company, whose practical affairs he will now direct, is capitalized at $21,000,000 and has only recently acquired additional claims valued at several million dollars.

If you don't know who the registration officer is of your district or where to find the place, apply at headquarters of the American party, Atlas Block, Bell 'Phone, 444; Independent, 2788.

YAMPA SMELTER CHANGE.

Improvements on That Plant Will Effectively Transform It.

Reports from Bingham state that the improvements now being made on the Yampa smelter are the feature of that camp. With the great addition to capacity and the radical changes and innovations to be completed this fall, it will have been transformed into a new proposition, with hardly a suggestion of the old plant remaining. It is thought that by the end of the year the present 200-ton plant will have been practically succeeded by one of 100 tons capacity.

Ore Shipments From Tintic.

The following shipments were sent out from mines in the Tintic district last week:

	Cars of ore.
Ajax	3
Bullion-Beck	5
Centennial Eureka	16
Carisa	3
Eagle and Blue Bell	10
Gemini	30
Grand Central	8
May Day	2
Lower Mammoth	1
Mammoth	7
Star Consolidated	3
Uncle Sam	4
Yankee	6
Total	99
Concentrates:	
Uncle Sam	3
Total	3

Eagle Eye Gets New Claim.

A quit claim deed from A. C. Lee and Bertha F. Lee of Salt Lake City to the Eagle Eye Mining and Milling company has been filed with the County Recorder of Utah county. The grantors for a consideration of $1 and 90,000 shares of the capital stock of the Eagle Eye Mining company transfer the following mining claims, situated about four miles northwest of Eureka, in the Tintic mining district: Church, Lincoln, Nineteen Hundred, Secret, New York, Reserve, Good Luck, Bee Hive, Future and New Home.

May Day Ore.

The last two carloads of ore sent out by the May Day Mining company are said to have netted $1908, or $863 a car. The new strike is turning out much better than the management expected a short time ago.

Star Con. Shippings.

About 100 tons of ore are being shipped weekly from the Star Con. The sensational values of ores already taken out lead the superintendent to believe that the same values can be had by sinking. Accordingly a winze is being started on the 900-foot level, which will be sunk about 200 feet.

BRISK WORK FOR SEVIER MINE INAUGURATED

Special to The Tribune.

RICHFIELD, Oct. 9.—The new mill and plant at the Sevier mine in Gold Mountain will tomorrow start out for real business. The machinery has been thoroughly tried and tested during the past two weeks and everything is now in excellent working order and ready for regular work. An Erie engine has been installed during the summer, it having been found that the water supply for power was too uncertain, and now there is horse-power to spare. The engine can slip every belt in the mill.

While getting the mill in readiness for operations, the development of the mine has not been neglected, and last week one of the most important disclosures in the history of the property was made.

Some time ago Capt. Lawrence, the manager, reached the conclusion, from a careful study and investigation of the mine, that there were big ore bodies to the east of the present openings, and he ordered cross-cutting in that direction. Last week the judgment of the captain was most emphatically verified, for a new vein course has been struck. This carries ore matter at least twelve feet in width and parallels the other veins. The values are of the same high-grade class found in other veins on the property.

Another piece of development work is the beginning of a new tunnel, No. 4, about 1500 feet below the mill. This tunnel is now in a distance of about 200 feet and already mineralized ground has been encountered. There is every indication that the big veins exposed above will be found in this tunnel. This will give a vein depth of over 1200 feet and running back into the mountain at least a mile. This, together with the demonstrated ore zone in tunnels Nos. 1, 2 and 3, and the recent discoveries in crosscutting, give the Sevier an area of ore ground that is little short of marvelous. Much of the ore goes $75 to $80 per ton, some of it goes over a hundred, and there are fissures which yield values in the thousands.

While Capt. Lawrence and other backers of this property had sufficient faith in it to put up $100,000 to secure it from Charles Lammersdorf, they did not begin to anticipate the great extent of its possible wealth until revealed by the development work of this season. "It is, without any flattery or exaggeration, as great a property as I have ever seen in my thirty years of mining experience," says Capt. Lawrence, "and far exceeds my most sanguine expectations. We have enough ore now in sight to task the mill for years. We have just made the junction between No. 3 and No. 2 tunnels by means of an upraise, and can now handle the output of all the tunnels through No. 3 right to the mill. If we get nothing more than what is in sight right now we have a big mine, but with the latest developments we have a property that it is impossible to form any idea of its immensity."

If you don't know who the registration officer is of your district or where to find the place, apply at headquarters of the American party, Atlas Block, Bell 'Phone, 444; Independent, 2788.

COMSTOCK SAWING WOOD.

Drifting in Progress—Lone Pine Shut Down for Winter.

Drifting has been commenced from the 450-foot level of the Comstock to the orechute now being developed on the 250-foot level. To reach this point will require about 600 feet of work, though, from past experiences in the mine, Mr. Hickey believes that other ore bodies of no small importance will be opened up as this work progresses. The ore bodies to the east of the shaft, which opened up well on the upper levels, will also be sought for from the 450-foot mark, so that interesting developments may be looked for from the property for the next few months. Though no definite information has been given, the company is considering the installation of a compressor plant and machine drills.

Work has been discontinued for the winter at the Lone Pine property in Snake Creek district. The new tunnel is now in 150 feet and it will take but a very little work next spring to reach the contact, where it is expected the ore-chute opened at a considerable depth in the old workings will be encountered. It has been impossible to get capital interested in the property as yet, but before much further work has been done the management hopes that the showing made will be such as to warrant the placing of money by investors for the greater development of the ground.—Park Record.

HUMBOLDT COUNTY REVIVES.

Quite a Number of Mines Being Bought and Sold.

There has been a number of mining men at Lovelocks and vicinity the past ten days and as a result of their investigations we have this week three sales of mines in this vicinity, says the Lovelock Tribune.

The Rescue claim is a property which H. C. Haldesty and son have developed in the mountains east of town. A shaft sixty feet deep has been sunk on the property, and in this is some very good ore.

For some time J. P. Eitting has been investigating the merits of the Old Eagle mine and trying to get Eastern parties to take hold of it.

One of the oldest properties in this vicinity is the Humboldt Queen. It has produced good values in years gone by, but with the decline of silver the mine was closed down. It is about twenty miles east from here.

For some months past Tom Threlfall, the San Francisco mining engineer, has been interested in this property and after thorough investigation and tests of ore has secured it for some San Francisco parties. The sale is in the nature of a bond, with a good cash payment to bind the bargain and with certain requirements for development work.

QUINCY MINE CLOSED DOWN.

Will Be Worked Through the Daly West Tunnel.

The Quincy mine was closed down Thursday evening and hereafter will be worked through the Daly West, all necessary connections having been made. This move has been under consideration for some time, as the Quincy hoist has really been an unnecessary expense on the company. The ores mined in the Quincy will hereafter be sent down through the chutes to the 1200-foot level of the Daly West and sent out through the tunnel. The Quincy has been an expensive plant for the company, owing to its location, being very hard to get its winter supplies and coal during the winter and spring months. The work in the Quincy will go on as usual, the only change being in the method of handling the ores, so that the camp will not suffer much by the change. Several thousand dollars per month will be saved by the Daly West by this scheme.

New Strike of Rich Silver Ore

Nevada Men Find a Promising Ledge Near the California State Line.

Six Reno citizens, who went camping a few days ago, made a strike in Plumas county of ore carrying high values in silver that may net them splendid returns. The men are all well known in Reno and their names are G. H. Humphrey, W. S. Hile, Fred Zimmer, August Johnson, George Geiger and J. M. Thompson. They brought samples of the ore to Reno and on it showing values of 62 ounces in silver to $2 to the ton in gold they sent parties to the place to stake out claims in addition to the two they took while on their trip.

The party were camping about seventeen miles northwest of Reno, just on the border of the State line, and it was on the California side that the find was made. They noticed that there were indications of gold on the surface and on panning out some of the dirt concluded that the ore was in paying quantities. They investigated, and, discovering a promising ledge, took out a few specimens, which were brought here to be assayed.

After making the find the men prospected in other places and found in one spot another ledge carrying a fair yield of gold and silver. They recorded two of their claims today, and next week will record the others.

Voters of the American ticket should register on Tuesday or Wednesday from 8 a. m. to 9 p. m. This is important.

PIOCHE CON. BUYS NEW CLAIMS.

Bonds on North Star and Talisman Taken Up for $5500.

The North Star and the Talisman mining claims at the Point, four miles west of Pioche, which were bonded last spring by Henry Weiland and T. J. Osborne to C. E. Rives, were passed over to the Pioche Consolidated Mining company yesterday, the balance of the $5500 purchase price having been paid. Rives formed the company and passed his option over to it, and has done extensive prospecting on the ground all during the past summer.

R. W. Brady, secretary of the company, went down to close up the transaction, and is carefully inspecting the claims and the other ground of the company surrounding.

Several promising ore chutes have been found on the claims, says the Lincoln County Record, covering a length of 400 or 500 feet, and work will now be prosecuted to see if the ore bodies take on depth.

Several ledges outcrop on the ground, and the belief is general with those who have given that section any attention that big mines exist there. The section forms the westerly end of Ely district and has not been prospected at any point to a greater depth than seventy-five feet.

With dozens of ledges showing values between the Point and this town, some of which have turned out considerable quantities of gold ore in the past, the future of the Point mines when depth is attained is promising indeed.

Lubeck Mill Is Active.

The Lubeck mill in Empire canyon is grinding away steadily, says the Park Record. The mill is equipped with a revolving screen and a Wilfley table, the motive power being furnished by a large water-wheel which utilizes the flow of water from the creek on which the plant is built. The product is hauled down from the creek bed farther up the canyon and, after being treated, is loaded into the wagons again and brought to town. Between 1500 and 2000 pounds of sand are run through daily, the tonnage of concentrates depending largely upon the condition of the water, whether it is clean or muddy. As soon as the heavy frosts set in this little plant will have to be closed down, as its water supply will be cut off.

Mining Notes.

Thomas Weir was in Tintic Tuesday looking after his mining interests.

Manager H. S. Joseph of the Carisa was in Tintic last week.

The number of leasers at the Bullion-Beck mine has increased considerable during the past few weeks, and that property presents a very busy appearance at this time. Of course, there have been but few sensational strikes in the ground in which the leasers are at work, but nearly all of them are at work making better than wages, while others are doing exceptionally well.

An air compressor will be installed at the Bullion-Beck Tunnel company's property.

Ore is piling up on the Butler-Liberal dump and will be allowed to accumulate for the present. The company has a good bank account for development expenses from its season's sales.

From the Ohio this week was shipped a lot of crude ore carrying a high per cent of copper.

Bingham stocks on the Boston market are steadily advancing.

Bingham's monthly output of ore is doubling the yearly output of seven or eight years ago, when it barely exceeded 45,000 tons. With the enlargement of its smelters and concentrators completed, the camp's output will have made another large increase.—Bingham Bulletin.

There is good demand for teams in some of the camps. The Bingham Bulletin says that many lots of ore from the smaller mines would be marketed at once if the teams were available.

Park Record: Excavating for the new addition to the Daly West mill is completed and the work of laying the foundation has commenced. The automatic scales recently installed at the mine is now working perfectly and has been found to be a great time and labor-saving device.

Park Record: The new tunnel-house at the Federal tunnel is completed and the laying of air pipe has begun. Work will progress uninterrupted all winter, and before spring something of importance will occur at the old Daly.

Park Record: The extensive improvements being made to the Empire canyon road in front of the Daly-Judge mill are almost completed. Other work is being done about the mill, which indicates that there will be "something doing" there ere long.

At a meeting in Goldfield last Saturday night an organization was effected to prevent lot and claim jumping. There has been little trouble from claim jumping, but the new arrivals flocking there pitch their tents on other people's lots and refuse to move. The owners refuse to sell or lease the land, and the tent-dwellers are simply trespassers.

A strike of $36 ore is reported on the 2250-foot level of the Con. Cal. & Virginia mine at Virginia City. The ledge is said to be a new one.
