UTE COPPER DOWN TO SINCERE WORK

Superintendent Wilkins Says All Preliminary Work Has Been Disposed Of.

MINERS AT FACE OF WEIR TUNNEL

Property Finely Equipped for Probing New and Richly Mineralized Ground.

Hereafter all expenditures made by the management of the Ute Copper company will be charged to operating expenses. This is the good word brought to the local offices of this company Friday by Superintendent Wilkins. This was the manner in which Mr. Wilkins announced that all the preliminary improvements had been made, so that this newly organized Bingham company will from now on be down to hard and sin-cere development work. It will be recalled that the Ute Copper company was formed last month by Thomas Weir and N. J. Catrow and their Salt Lake associates, the company taking over the old Winamuck and other groups of the

old Winamuck and other groups of the Bingham camp.

Mr. Wilkins states that the miners are now working in the vicinity of the face of the Weir tunnel, the working being cleaned out to that point, and that the work of pushing this tunnel into resources at ever-increasing vertical depths soon will be well under way. This tunnel was run several years ago by the original owners of the proposities. This tunnel was run several years ago by the original owners of the properties, and it will be the main avenue of the Ute company into its red metal treasure vaults. The compressor is in operation, all other needed equipment is working in splendid order and the buildings for the comtent of the men employed are completed.

The Ute Copper company has a splendid scope of richly mineralized Bingham territory with which to work, and the developments of the present season confidently are expected by those familiar with the ground to demoustrate beyond all doubt that the owners have another big copper mine for that great

another big copper mine for that great Litah mining camp. President Thomas Weir at the present time is in the East, and before his return to Salt Lake he will spend some time in Europe.

BLACKBOARD MINING.

Easterner Brings Sound Advice to Goldfield Mine Operators.

George H. Phillips, the Chicago corn king, who figured in so many sensational adventures in the pit two years ago, is in Goldfield and already has made large investments. With Mr. Phillips is Thomas Harney, also a well known Chicago operator. They are interested in the Frances King property. 71-2 miles cast of Goldfield, says the Goldfield Tribune.

field Tribune.

"We have come here to mins and not to play the stock market," said Mr. Phillips. "The thing Goldfield needs to do is to give more time to real mining. This blackboard mining won't produce any mines. From what I have learned of this district, and from what I have seen before coming here. I am convinced that this is the greatest mining district in the world. The riches aren't even touched yet, but it is going to take time and work to develop them, and again, what the district needs is miners and operators who know their miners and operators who know their

Mr. Phillips and Mr. Harney were brought to Goldfield by the report of promising developments on their Fran-ces King property. At a depth of fifty-five feet a large body of ore assaying \$40 to the ton was found. Machinery \$40 to the ton was found. Machinery for hoisting will be installed immediately. The two men were accompanied by M. J. Fink of Goldfield, who is returning from a business trip to Chi-

returning from a business trip to Chicago. "Chicago has faith in the district," said Mr. Fink, 'but there is a strong suspicion of stock jobbing which is doing it much harm. I talked to Senator Mason at the Hamilton club. He seemed to know all about the camp, as indeed they all did. 'You're killing the goose that lays the golden egg,' he said. 'It's a mighty good stock market that lasts forever and the Gold field people are doing all in their power to bring theirs to a quick death.'

MEERSCHAUM DEPOSITS.

Fine Material Found in Good Quantities in New Mexico.

okers who delight in meerschaum pipes need not despair over the reports that this material is doomed to so limited a production as to prevent its use as heretofore. Word comes from New York that the Meerschaum company of America has just finished an examina-tion of 300 acres of its New Mexico meerschaum deposits, with the result that two true fissure veins were un-covered more than 1200 feet in length. The meerschaum is stated to be of mag-nificent quality. William J. Selden-herg, formerly vice-president of the American Tobacco Company, is presi-dent of the Meerschaum company.

Copper Prices Off.

James A. Pollock & Co., bankers and rokers, 6 West Second South street, irnish the following, received over their private wire yesterday afternoon. Boston wires: Metal exchange quotes lake off 14c in ask price, electrolytic off 14c in the bid and asked and casting off 14c in the bid price.

GIGANTIC TASK IS VERY NEAR COMPLETE

Utah Mine Management Has Labored Under Very Many Severe Difficulties.

The management of the Utah mine at Fish Springs has had one of the most difficult kinds of propositions upon its hands during the past few months in its efforts to repair the great damage occasioned by the fire in the main shaft. Superintendent Sutton arrived in Salt. Superintendent Sutton arrived in Salt Lake vesterday on company business, and when seen by The Tribune, stated that progress in reclaiming the main shaft was not only impeded by the accumulated debris, but by the fact that the air was too stifling and hot for men to breathe in the shaft for some time after the fire. It has taken time, there-fore, to get to depths, but the work of reclamation has been done well.

Some time ago the management was able to get upon the 800 foot level by means of a winze from an upper work-ing, but not until a few days ago could ing, but not until a few days ago could anyone get any ways near the station on the deeper level. Mr. Sutton states that he has gone now within 75 feet of the 800, and that the shaft has been cleaned out to this depth. The work of retimbering the shaft has been going on satisfactorily, and it will not be long until the company will be utilizing this main shaft for all purposes. The hoisting apparatus and all other surface equipment have been installed at the shaft in fine shape. Mr. Sutton states that the present system of ventilation in the mine will be a decided improvement over that formerly in vogue.

ment over that formerly in vogue.

The Utah mine has been securing the ore for shipment from the other workand the rock has been extremely Mr. Sutton brought with him an assay sheet showing numerous samples taken from the faces of the present old workings, and the values run extremely high, as high as 64.2 per cent lead and 1161.4 ounces silver.

DAY ON 'CHANGE.

Higher-Priced Stocks Were in Demand Friday on Exchange.

Friday on the local exchange there was a reasonable amount of trading done in the higher priced stocks, so that the 19,824 shares that sold had a market value of \$22,232.25. Among the active stocks May Day held first place. The following were the transactions in the unlisted stocks: UNLISTED STOCKS

LAST TO APPEAR

Llew Humphries Takes Quick Glance at Hustling Sagebrush District.

It is distinctly characteristic of the resurrection period of Nevada that new towns and new districts spring up over night. In fact, new cities are born much faster than the makers of maps can take them into account, and that is the reason that one would look over even many of the latest maps of Nevada without finding thereon the bustling little community now becoming known to fame under the appelation of Tenabo. Tenabo is located about twenty-three miles southwest of Beowawe in Lander county, connected with the latter point by a good wagon road. Llew Humphreys, chief expert for the Gunn Thompson company, returned Thursday from a round-up of several Nevada districts, and while in the Sage-bush State he went into the Tenabo secbush State he went into the Tenabo section to take a look at this camp. A great deal is being said abount Tenabo at present, and Mr. Humphreys stated yesterday that there was a great deal of energetic development going forward upon properties there. The district is very large, and there is abundant room for the many prospectors and investors who invariably crowd into one another to reach a new section first.

One thing that impressed Mr. Humphries was the amount of machinery that is going into the camp. He met several outfits going in with mining equipment, while much is already on the ground and under process of in

ground and under process of in stallation. This looks like business, and also like Tenabo will be one of the important interest centers during the rest of the present year. Mr. Humphries stated that be hardly spent sufficient time in the district to form a very close acquaintanceship with the mineralization of the district and its pos-

Enroute to Salt Lake, Mr. Hum-phries visited Elv. and the mines of the Cumberland Ely company. He was the Cumberland Ely company. He was much impressed with the condition of the mine, and is more than ever convinced that the camp of Ely, with which he has been connected during the new era of activity, is destined to make most astonishing history for the world of copper mining.

WHITE ALPS COMPANY HAS OPENED A MINE

C. G. Goss Returns Positive That Rosebud Property Is a Sure Winner.

"All I can say at this time is that the White Alps company has opened a mine in its Rosebud possessions," was the way C. G. Goss put the situation Friday upon returning to Salt Lake from a several weeks' trip through Ne from a several weeks' trip through Nevada. Mr. Goss is one of the many Salt Lakers interested in the noted White Alps company, he being one of the two who first discovered that the group of Rosebud now owned by this organization was worth securing, the other being William Goss, his brother. In order to back up his statement to The Tribune, Mr. Goss showed some extremely handsome rock that is now being extracted from the north crosseut of the property.

of the property.

The company has been sending the crosscut to the north from the 50-foot level of the shaft, and after proceeding for thirty-eight feet, the crosscut tapped four feet of ore that averages clear across thirty-one ounces silver and \$2.80 gold to the ton. At the point where the crosscut found the chute there was a vertical depth of seventy feet, which shows how quickly the working got beneath ground. The ore so closely resembles that from the mines of Tenopah that one not intimately acquainted with the same easily would be confused when asked to pick one from the other. The ores from the Tonopah camp come from the thousand foot level.

The ore referred to as coming from

The ore referred to as coming from the White Alps was brought to Salte Lake Thursday by William Goss, the superintendent of the mine. He is now in the city on company business. A. P. in the city on company business. A. P. Mayberry, the consulting engineer of the company, leaves for the property to day for the purpose of looking over the developments and mapping out the fu-ture plans of development work.

JENNIE BULLION.

Company Gets Good Figure on Metals From the Property.

The Jennie company has received the settlements upon the bar of bullion brought up from the mine and mill several days ago by F. R. Davis. Just how much metal was contained in this bar has not been divulged, but it is known that the company received 667-8 cents per ounce for the silver therein, and \$20 per ounce for the gold contents. This shows that the Jennie company is getting down to business right, and that the present system of metallic value saving employed in the mill is based upon the correct principle. This Gold Springs district property is This Gold Springs district property is assuming splendid shape, and when all the accessories are in running order, there will be another generous dividend payer added to the long list of this State.

The Metal Market.

The metal quotations for Friday, posted by McCornick & Co., were as follows: Silver, 66%; lead, \$6; copper castings, 22%; copper cathodes, 23%;

Mining Notes.

E. R. Pembroke, the mining engineer left yesterday on a professional visit to the mines of southern Nevada.

Herman H. Green leaves Tuesday for visit to Eastern points. Mr. Green secretary of the Western Utah Coper company

Grant Snyder of the National Development company, and manager of the Yerington Malachite and the Ely Con-solidated companies, left Thursday evening for the mines of these com-

Managing Director Holden of the United States Smelling, Kenning & Min-ing company is in the city from his Eastern headquarters on business con-nected with the company.
