

SCIENCE DRAWING NATIONS TOGETHER

Trade and Good Will Furthered by Research, Says Edward R. Weidlein.

By the Associated Press.
WILLIAMSTOWN, Mass., August 24.—Scientific research, which is characterized as the fundamental industry in the protection of a nation, is doing more for the facilitation of trade regulations and international good-will than any laws which can be devised, Edward R. Weidlein, director of the Mellon Institute of Research, Pittsburgh, Pa., said today before members of the Institute of Politics.

"The effort of all countries to become independent industrially is back of scientific research," Dr. Weidlein said. "It is causing unrest in some quarters because of apprehension of the results which competition may produce. But there is no need to worry if we keep our feet on the ground."

Discoveries for All.
"There is no reason for one nation to be apprehensive of the progress which another is making in scientific research, because, scientists, through literature and other means, are distributing the information which they have gained and co-operating in its use. I have found it just as easy to enter a European plant, the workings of which I wanted to inspect, as to enter one here."

"Selling, in which personality plays so large a part, is bringing about a closer co-operation between industrialists and scientists of different nations, and thus a closer co-operation between the nations."

Harrison E. Howe, chemist of Washington, D. C., and editor of Industrial and Engineering Chemistry, discussing the industrial development which scientific research has made possible, cited the increased use of cellulose in the manufacture of paper, rayon, synthetic leather and sausage casing. "Science," he declared, "has taken cotton stockings off women and put them on the sausage."

Sled Machine Meats.
He predicted future use of sled machines which would issue steaks and chops, wrapped in paper covering made of cellulose products and cooled on dry ice, for the use of the consumer.

"The predictions of the deadly use of chemicals in future wars have been greatly exaggerated," he said in discussing the relations of scientific research to warfare. "Writers have made it as horrible as possible to arouse public indignation against war, as a matter of fact the men gassed in the last war had over so much better chance of being whole, than those who were shot. Destroying a city by gas dropped by airplanes is far more difficult to do in reality than to imagine, and it is likely, should there be war in the future, that attack on a city would be made by shelling rather than by gas."

Beards Woven Into Ornaments.
The Field Museum at Chicago has a number of interesting articles which are made of the white beards of old men. When a man too young to grow a white beard wanted to make one of these ornaments he prevailed upon one of his elderly relatives to part with his beard or hired an old man outside his family to grow one for him.

Hens Laying More Eggs.
The hens of this country are laying more eggs than ever. By some this is attributed to the fact that chicken food is cheaper and the birds are being better fed. Improved methods of caring for the birds probably has some influence.

BRIG. GEN. C. L. McCAWLEY RETIRES FROM MARINE CORPS

Quartermaster Reaches Age Limit After Following Father's Career.

Served as Aide on Staff of President Roosevelt at Latter's Request.

BRIG. GEN. C. L. McCAWLEY.

Brig. Gen. Charles Laurie McCawley, quartermaster of the United States Marine Corps yesterday was placed on the retired list of the Marine Corps, having completed his service in that branch of the national defense service to the age limit.

The son of a Marine who served as commandant of the corps from 1876 to 1891, Gen. McCawley saw service in Cuba, in the Philippines and in the World War, winning the Brevet medal, the West Indian Campaign medal, the Philippines Insurrection medal and the Navy Distinguished Service medal. Gen. McCawley was born August 24, 1869, when his father was a major of Marines. He was brought up in the corps' environment and followed in his father's footsteps as a sea-soldier. He was brevetted with the rank of major, dating from June 11, 1898, when, during the fighting incident to the landing of Marines at Guantanamo Bay, Cuba, he won the commendation of his superiors. During the Philippine Insurrection he participated in many fights. On his return to the United States he was attached to the quartermaster's department. In 1907 he was appointed an aide to President Roosevelt at the latter's request. He became quartermaster of the corps with the rank of brigadier general on August 29, 1916, and served as such during the war.

GREAT BRITAIN AND U. S. DIFFER ON AIR POLICY

Agree as to Importance of Commercial Aviation, but Disagree on Development Methods.

LONDON (AP).—Great Britain and the United States are in full agreement as to the importance of civil aviation, but in methods of developing their respective commercial air fleets they have agreed on practically nothing.

Sir Selton Branker, director of civil aviation under the British ministry, called attention to this in speaking before the American Chamber of Commerce here.

"In Great Britain," he said, "we insist on strict regulation of commercial flying from the very first. In America your flyers did pretty much as they pleased until the industry was well advanced."

"Here we looked upon the government subsidy as the only basis on which commercial aviation could be developed; you, on the other hand, have steadfastly refused to have anything to do with subsidies."

"Here practically all the emphasis in civil aviation has been placed on passenger carrying. In the United States the transportation of mail and express came first."

"Here practically all of our commercial air traffic has been confined to daytime flights; in America night flying long has been common."

"And yet, different as American and British theories on civil aviation have been all these years, a glance at the results achieved suggests that possibly both sides were right."

Second Tampa Bank Reopens.
TAMPA, Fla., August 24 (AP).—The first bank of Port Tampa City, closed July 17 with a number of others in this vicinity, reopened for business today. This was the second of the closed banks to resume business this week. The State Bank at Bowling Green resuming operations earlier in the week.

Cornstalks, which were mostly waste product, will now net the farmers an average of \$9 an acre as stock for making newspaper paper.

MERCHANTS PLAN FOR FAIR EXHIBITS

More Than Half of Space Has Been Reserved, C. of C. Reveals.

Definite plans for their participation in the fifth annual Industrial Exposition, which will be held, beginning October 15, in the Washington Auditorium, under the auspices of the Washington Chamber of Commerce, will be made this week when representatives of several industries meet in a series of trade conferences.

Coal dealers are scheduled to confer at the Merchants and Manufacturers' Association office Tuesday night, and tailors are expected to meet Wednesday night to discuss an exhibit of Fall styles in wearing apparel. Blue printers and stationers are scheduled to discuss their plans during the week also. The latter group is expected to ally itself with the exhibit of the graphic arts, in which the Typothetae and the Lithographers Association are planning to visualize what probably is the Capital's largest industry—printing.

The Builders' Exchange already is planning to erect the front elevation of a residence in order to demonstrate modern building practices. According to an announcement made last night by the Chamber of Commerce, more than half of the exhibit space has been reserved. A complete cross-section of Washington's industries is presented by the exhibitors, who the chamber says, represent every field of industrial endeavor here.

Odd Way Advertises Town.
A novel method of obtaining funds to advertise their town has been adopted by the people of Barmouth, England. Scores of women canvassers are making a house-to-house canvass seeking donations from householders. That the publicity campaign is getting results is indicated by the fact that in one day a hundred applications for guide books of the town were received.
