

Power, has captured so many courts and owns so many judges.

Labor believes that organized capital has controlled government, the courts, the soldiery, the police—the Law and all of its effective arms—and that these have been used on the side of organized capital in its desperate fight to kill organized labor.

Labor believes that the peoples' government and all of its instruments have been used to intimidate workers by railroading their leaders to prison.

Labor believes that the people's government and all of its unjust, injunctions whose effect was to hold Labor's arms while Capital stuck a knife into its vitals.

Labor believes that it must fight back in self-defense, or perish. Are YOU certain that Labor is mistaken?

Anyhow, it is better for all of us that Labor speak right out, and speak boldly, its earnest convictions. It may help us to find Justice, who now seems to be lost in the mystic maze of Law.

SOME WAIST FITTING POINTS FOR GIRLS

There are a few things which should be remembered in fitting oneself, especially if it be the difficult matter of waist-fitting. Do not put the waist on the wrong side to fit it. Always try a garment on and do the fitting of it the way you propose to wear it.

This suggestion is important for the reason that few women are exactly the same in slope of shoulder and waist on both sides. When the waist is fitted to the figure on one side and is turned over on the other, you may find a defect which is due to this very thing.

When putting on a waist to be fitted slip the hands underneath it and turn the shoulder and underarm seams toward the front. If there are other seams turn these toward the back. This is necessary in order to make the waist lie flat. In pinning the front or back together, which is

one of the first things to do, have at least two guide lines.

The waist line at the bottom may be one. The other might be a line which dressmakers call the "chest line," a line parallel with the waist line, but only three inches down from the neck and running about six inches across the middle front.

In making alterations by pinning be sure to pin **securely**. Otherwise the alterations will be of little use, as by the time the waist has been removed some of the alteration marks may have been lost through falling pins.

Stops Curdling.

If milk be on the turn, a small pinch of carbonate of soda put into it before boiling often stops it from curdling.

Removes Grease.

Remove grease spots from wall paper by placing blotting paper on them, then a hot flatiron.
