

PIGEON-TOED WALK IS BENEFIT TO BODY, SAY COLLEGE "PROFS."

Georgine Eighme

Here's a Picture of Two Extremes—Miss Georgine Eighme's Face and Feet. She's an Exponent of the Pigeon-toed Walk.

Berkeley, Cal., Oct. 21.—Walk pigeon-toed!

This is the latest health decree.

It is the best way to relieve fatigue, according to Prof. Maude Cleveland and Mrs. Elliott of the department of

physical education at the University of California here.

They claim that to walk pigeon-toed is a support to the arch of the foot, and therefore not a strain on the muscles of the body, which causes that "tired feeling."
