A Lesson in Intensive Farming by R H. Forbes, Director and Chemist of Agricultural Experiment Statlen

TIMELY HINTS

University of Arizona, January 15, 1907. January 15, 1907.

Just west of Yunn, Arizona, in the alluvial flood-plain of the Colorado, lies a little farm of 7.2 agree which on May 1, 1955, was virgin buttouthand, covered with sufficient, arrowbrush and crossole bushes. The original purpose of the fract was for planting selected varieties of date pulms imported by the U. S. Department of Agriculture from the Old World. The Experiment station, May 2, began preparing the ground, and on May 20 the work of levelling, bordering and irrigating the fract and the planting of 152 paims, was completed.

Recognizing, however, that a farmer with Recognizing, however, that a farmer with his living to make meantime, cannot afford to wait for an orchard to come into bearing, it was planned to plant crops for quick re-turns between the tree-rows, thus putting the work on a feasible basis from the small farm-er's point of view. In order to economize ground the irrigation borders were so placed as to coincide with the rows of paims, thus stilliging space otherwise panelly wested ground the Irrigating borders were so placed as to coincide with the rows of paints, thus stillizing space officrwise usually wasted. The tract was divided by the borders into lands, for the most part one-half an acre in size. Irrigating water from the Colorado Valley P. & I. Canal was obtained in the customary manner, and E. L. Crane, himself a Yuma, Valley farmer, andertook the care of what was nicknamed our "play farm."

In size, as well as in the intensive character of the work planned, this "farm" is the opposite of the average holdings of this locality. The prevailing crops of the region are alfalfa, corn, barley, and forages in general, comparatively little attention being given to vegetables and fruits. Withat, the cost of levelling land in this region is high, rarely failing below iwenty dollars an acre at current priges for labor and teams. Moreover, the cost, exclusive of maintenance, of the Government irrigating system now under construction will be about \$2.30 an acre annually for ten years. To meet these and other heavy items of expense in connection with the establishment of a farm in this region, intensive crops of si more remunerality character than those now in vogue, are essential. It was partly, therefore, as an object lesson bearing upon times financial aspects of the general situation, that this cultural work was planned.

The soil of our lenet, a warm, sandy loan well adispted to gardening operations, was heyelied, ditched and bondered at a contract spice of \$17.20 an acre, considerably less than the average for the locality, reckoning the abor of men and leauns at current rates. In addition, barbed wire and posts for fencing cost \$60.10; lumber for headgates cost \$20.57, a drive well pisot and pipe, a pitcher-spout pump and a barrel, \$13.15; a small lumber two-troom house, he calling five and one half days carrienter hire, \$162.75; and a brush-roof shelter for horses, about \$5.00. Only skilled abor employed in levelling, bordering and ditching the ground, and are fast construction of the house, is included in the above estimates, as the common later required ordinarity would be, and in this case was, furnished by the farmer bimself.

To bring this ground under cultivation and make it hostishes for assumit farmer and his family, as stated above, therefore required a test, wagon, ploye, harrow, haying configurations shows in local and other small foots.

CROPS AND MARKETS.

CROPS AND MARKETS.

were Early Rose polatecs, White Bermuda onious, Ruckyfryd cantaionres, Dwart Cham-pion sed Burpee's Quarter Century tomatocs, and alfada, besides a few bills of watermelous

and alfalfa, besides a few fills of watermelons and sundry vegetables.

The produce was marketed in Yuma with the exception of tomatoes, which, for the largest part, were expressed to Tucson and Bistice. The following statements for the various crops are on the lands of act cash re-turns to the small farmer, who with at, aver-age family of five and a term of horses is asgranting of the cold a testin of norses is a nimed to do the work required, as explaine clow. Items becessifuling cash outlay, a ced, irrigaring water, and crates are deducte our gross returns. Water costs an average fill cents for irrigation per acre for the ero rown. The yields in certain testiners as own. The yields in certain instances as w. dag to the unimproved conflition of the al, which, like desert solis in ger. ...al, we all which, like desert solis in ger. ...al, we soit, which, like desert sols in ger., at, was low in nitrogen and organic matter. Some small salty areas also affected yields locally. White Eermand onlines: At acres; Seed plant d Sent. 27-Oct. 3, 1935. Young orders transplanted, Feb. 5-b, 1936. Crop metured about Jane I. Vield, 355 pounds of dry onlines. Highest pine received, 25-c a pound lowest price received, 25-c a pound lowest price received, 15-c a point. Entire trep marketed in Yuma.

Seed. Cash outlay. \$2.28

3 Irrigations in seed bed and \$1 irrigations in field, about \$3.3
Seeks and sundry, about \$2.6
376 pounds of onions at \$2.5 et cash returns, not de-

The amount of labor expended upon this crop was large for the area, especially at the transplanting time. One day's team work in preparing the land and about \$2 days, men's time, were required to bring it through, although the work was not heavy and could have been largely performed by boys. The field was lew owing to the desert and unferfillized character of the soil, orders requiring large smounts of organic matter in the soil to give good results.

Faily Hose potatoes; \$1 acres Seed polatoes planted Feb. 16-19, 1996. Beginning to bloom April 33. Crop all harvested June 13. Yield, 2015 pounds. Highest price, May 21, 23c. Buils of crop, 25c. All nurketed in Yuma. 10.673

Hockyford cantalounes; I nere: Seed planted March 7-9, 1996. Cold, backward snason re-sulting in thin stand equal to about three-fourths of an arce. Crop pleked July 5 to Sept. 7. Yield 789 dozen, sold locally at from 35c to 15c a dozen.

Cash \$141.60 £15.00

The labor on this crop was light, but in this The labor on this crop was light, but in this case time consuming, because of inconvenient arrangements for marketing. There were employed on the crop 31 days men's time; 8 days women and boys; and 2 days team, not otherwise included.

The crop was fertilized with barmand manner in about three-fourths of the fills, and, as stated above, the stand was poor. The results of this acre are therefore conservative.

Watermelons and sundry small items of produce were sold locally to the amount of the fills and fills.

Seed and irrigating water, about \$ 200 Leaving a cash return of about . 13.65

Alfalfa; 1.70 acres: This was sown May 18 1995, yielding three cuttings of about five tons of clean hay the first season. During the second season, covered by this Timely Hint, there were seven cuttings with a total of about 20 tons of hely. The only cash outlay was \$22.41 for irrigating water. The labor required was, man's time, 16 days and team nine days, which is rather high labor required was, man's time, 16 days and team nine days, which is rather high labor required season of the small size of the field under consideration, and limited use of machinery. This crop at \$5.00 to \$10.00 a ton, loose, which has been the price this season, represents a cash return of not less than \$190.00 for the crop; but this kay was used to feed he team employed on the place, proving to be more than sufficient for that pursoes, since a stack of about three lons remains at the end of the season. The manure from this source, being free from Hermuda grass seed, was especially valuable for fertilizing a part of the crops grown

tion of the country than all other diseases put together, and until the last few years it was supposed to be in curable. For a great many years doctors pronounced it a local disease and In the same way the trees give prescribed local remedies, and by con stantly failing to cure with local treat ment, finally pronunced it incurable Science has proven catarrh to be constitutional disease and therefore it is that Hall's Catarrh Cure, manu factured by F. J. Cheney & Co., Tole do, O., is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoon ful. It acts directly on the blood and mucuous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circularand testimquials. Address F. J. Chen-

ey & Co., Toledo, Ohio. Sold by druggists, 75c.

Prison Notes

[Florence Blade] A Mexican prisoner named Valenzusla feil off the machinery building hist week and broke one thigh, his collar bone, and one arm in two places. This week a negro prisoner fell off the same building, dropped the same distance and lit square on top of op, brushed the gravel off the top of his head, and Capt. Van Sicklen said, "Are you hurt?" he replied, "No, suh, only de stan jar sorter sprained mah wrist,
