

THEY MAY RAIL AT TRIS LIFE.

[BY T. MODEL]

They may rail at this life—from the hour I began it I've found it a tip in feel for the hour I began it I've found it a tip fe full of kindners and biles:

And until they can shew me some liappier planet.

More social and bright, I'll content me with this.

As long as the world has such eloquent eyes,

As before me this moment enraptured I see,

They may say what they will of their orbs in the shies,

But this earth is the planet for you, love, and me.

In Mercury's star, where each moment.

But this earth is the planet for you, love, and mela Mercury's star, where each moment can bring she
New sunshine and wit from the fountain on high,
Tho' the ayangha may have liveller poets to sing the
They've none, even there, more enamor'd than I.
And, as long as this harp can be wakened to love,
And that eye its d vine imagination shall be.
They may talk as they will of their Edensahove,
But this earth is the planet for you, love, and me.

But this earth is the planet for you, love, and me.

In that star of the west, by whose shadowy splendor
At twitight so often we've roamed through the dew,
There are maidens, perhaps, who have bosoms as ter
and look, in neur witights, as lovely as you; feel
But, though they were even more bright than the gree
Of that isle they inhabit in the heaven-blue sea,
As I never these fair young celestials have seen,
Why—this earth is the planet for you, love, and me

As I never these fair young celestials have seen,
As I never these fair young celestials have seen,
Why—this earth is the planet for you, love, and me.
As for those chilty orbs on the verge of creation,
Where sunshine and smiles must be equally rare;
Did they want a supply of cold hearts for that starton,
Heaven knows we have plenty on earth we could
seen knows we have plenty on earth we could
heaven knows we have plenty on earth we could
heaven knows we have plenty on earth we could
heaven knows we have plenty on earth we could
heaven knows we have plenty on earth we could
heave such to such spirits as you, love, and me.

[From the New York Evening Post.]

SAMPSON'S REPORT.

A report of the case of Manrice vs. Judd,
relative to the inspection of lish oil, which was
lately tried in the Mayor's count, and gave rise
to the carious question, whether a whale is a
fish, has just been published by Van Winkle,
as reported by Mr. Sampson. The examination
of the witnesses on this oxyasion, gave rise to
a good deal of humonr, at the trial, and much
as crossion, so that the count were almost
us much puzzled as in the famous case of Wes
forlo, in which the question was whether a
black man could be the father of a white
child; and in which the learned doctor was in
the affirmative.

Captain Preserved Fish having stated in his
evidence, that all fish have perpendicular tails,
but that the whole tribe have them in a horizontal position. Dr. Mitchill observed, that if
whales and flounders could go upon their
edge, they would have their fires in the same position as the rest of the finny tribe.

Question by Sampson to Dr. Mitchill:

Q. They would, nevertheless, if they took
the famey to play the antic in that manner,
astonish the other natives of the deep, as they
would present two sides of two different
colours, a white and a brown; as Captain Fish
might say, the starboard side white, and the
larboard side mud colour. And kow would
their eyes appear? Would they not have a littie of a squint?

"A. It is true the two eyes

of a squint?
A. It is true the two eyes would be on the

one side.

"Q. Then the white side would see nothing, and some designing fish would take them by the blind side?"

the blind side?"

The following was put to the same witness:
"Q. If, then, they are provided with hands and arms, it is natural to expect fingers and thumbs. How is it as to the carpus, metacarpus, and phelanges; are they pregent; if so; could they use them for ordinary purposes, as to thread a needle, or do this? (taking a pinch of sould).

they use them for ordinary purposes, as to thread a needle, or do this? (taking a pinch of shuff)

"The witness, after some consideration, observed, that these extremities were covered with a membrane of web.

"Q. Like people that wear mittens. No wonder they are awkward, and all their fingers like thombs, as the saying goes?

"A. Their arms are, nevertheless, pretty filly developed, and in one of the cetaceous kind called the manati, so much as to enable it to take its baby in its arms & carry it on shore, thus, (using a significant gesture.) The females of this family wear whiskers.

"Q. She is then sometimes a wet nurse and sometimes a dry nurse, or an amphibious larse; in zoology, the whiskered lady."

The learned doctor being asked his opinion about the kraken, said that one writer had described it a mile and a half in diameter, but that Pliny gives it only four acres of expent; that the whale leeds upon it; and that a huge whale has been known to hite off one of its large paws, as large as the mast of a ship, and make a meal of it.

The readers of this report will be much amused by the "keen encounter of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the learned doctor and the last learned of the last red of the last red of the learned doctor and the last learned of the last red of the

of the learned doctor and the no less fearned counsellor, in solving this profound problem. The following is a specimen of Mr. Sampson's drollery:

drollery:
"When it is considered that our waters abound with the doublins, so menned by na-ture to aid and succor us, that the larger kinds are only banished by our cruelty from our shares; and seeing it is well attested that their milk resembles that of cows, with the addition of cresm (see Dr. Brewster's Cyclop. article Getolegy,) would it not be worthy the wisdom of our statistical, agricultural, & eco-nomical societies, to turn their attention to this weighty consideration, whether these creatures pright not by good treatment be induced to lead their aid to the navigation of our waters, and to furnish us in return for our hospitality with abundance of norrition? How far they with abundance of notrition? How far they may be used in our great causis, where there is none but fresh water, may be a question; but there is no reason, provided the oversingle can be deepened, why judges, and lawyers, legislators and politiciaus, office hanters and lobby members, may not, before many years, in their attendance upon the Terms, enjoy the advantage of a conveyance upon a whale, back, infinitely surpassing the speed of and lobby members, may not, before many years, in their attendance upon the Terms, enjoy the advantage of a conveyance upon a whale's torck, infinitely surpassing the speed of the steam boat, and the shores of the Wallabout may resound with the music which calls the dolphins to be mitked, and be studded with villas where the citizens shall repair to enjoy country air and dolphin's whey. The bay of Goanes seems designed by nature for the reception of the whales; from them will be derived a rich supply of butter and cheese for bome consumption and foreign commerce, Arother important acquisition will be the defence and safety of our harbor. If one of Clandius's gallies was swamped by a single whale, overpowered and stranded as it was, what would the file of a three decker, or a phlogobombos, avail against an inundation from the snouts of three hundred well disciplined whales? It is evident, that the use of fire engines wife superseded.

"If this appear visionary, it should be remembered how the steam boat was, till its completion, a subject of derision to the incredulous."

AMERICAN SCENERY. From " Darby's Tour from the city of New York to Detroit, 1818,"]

York to Detroit, 1818," J

THE PREFACE.

"I wrapped myself in my cloak, and lay down under a laurel, on the bank of the Enrotas. The night was so pure and so screne, and the milky way reflected by the current of the river, that you might see to read by it. I fall asicep with my eyes fixed upon the heavens, having the beautifut contellation of Leda's swan exactly over my head. I still recollect the pleasure which I formerly received from thus reposing in the woods of America, and especially from awakening in the middle of the night. I listened to the whisting of the does and stags; the foar of the destant cataract; while the embers of my half braying of the does and stags; the roar of the distinct cataract; while the embers of my half extinctuished five glowed between the foliage of the trees. I loved even to hear the voice of the tropuels, when he shouted in the recesses of ins forest and when, in the brilliant starlight, and the silence-frustore, he segmed to be preclaiming his unbounded like-ty. All this may aliged delight at twenty; because there is another, in a manner, for itself, and there is no early youth a certain resilespiess an importance, which incessantly encourage the greation of chameras is a visional fingual:

relish for more solid pursuits, and loves, in particular, to dwell on the linustrious examples recorded in history. Gladiy would I agan make my couch on life banks of the Eurotas or the Jordau, if the heroic shades of the three hundred Spartans, or the twelve sons of Jacob, were to visit my simplers: but I would not go again to explor a virgin soil, which the plough-share has never lacerated. Give me now aucient deserts, wher I can conjure up at picaura she walk of Babylon, or the legions of Pharsadia—grandia essa; plains where furrows convey instruction, and where, mortal as I am, I trace the blood, the tears, and sweat, of human kind."—Chateaubriand.

I cannot conceive the satisfaction it can give to a generous and feeling heart, to trace the last fragments of a ruined city, or behold, reduced to desolation, fields that once waved in goiden, harvest. To the eye of reason and philosophy, a review may be desirable of the revolutions of human society, in all line various stages, from the savage horde to the most refixed civilization; but to me it would yield more pain than granification, to behold Rome, Athens, or Jerusalem, in dust and ashes. The reminiscence that should recal former greatms sy that would raise in imagination from the tomb the Pericles, Euripides, Macabces, the Scipios or the Cassars, would excite rather a tear of bitter regret, thawa pleasing sentiment of poetic enthusiasm, or glaucing over the ocean of past time. I would rather indulge my fancy in following the fature progress, than in surreving the wreck of human happiness; I would rather see one flourishing village, rising from the American wilderness, than behold the rains of Balbec, Palmyra and Persepolis. Like Chateanbriand, I have often reposed in the woods and plains of North America, in the silence of mght, under the glauces of the swan of Leda, the gleams of Sirius, or the beams of the pale moon playing amid the leaves of the forest or exhibiting the fairy picture of the distant prartie. I have beheld the deep gloom around me dispell

between the sharts of appression and the bosom of innocence; and I saw the stern brow of justice bedewed with a tear over the chastised victim.

Many were the long and tedious hours I have thus beguiled, when no sound interrupted my chain of reflection, except the sighing of the nightly breeze, and I have enjoyed a pleasure greater than ever man felt amongst 'broken columns and disjointed arcades. I have seen, on an immense surface, these warm anticipation realized. In west Virginia, in west Pennsylvania, in Kentucky, Olsio, Indiana, Illinois, Tennessee, Missouri, Mississippi, Louisiana, and Alabama, in west New York, Michigan and in Canada. I have for 35 years been a withness to the change of a wilderness to a civilized garden. I have roamed in forests, and inpon the same ground now stand legislative halls, and temples of religion. New states have risen and are daily rising upon this sonce dreary waste. I am willing to leave the man unanvied to his enjoyments, who would prefer the barbaric picture now presented by Greece, Asia Minor, Syria, and Palestine, to the glowing canvass whose tints are daily becoming richer and stronger, upon the hills of North America. I would rather read the immortal works of Homer, Thucydides, or Demosthenes, upon the banks of the Ohis or St. Lawrence, than acarch the deserted tombs of those mighty geniuses in their now desolate native land. These men have left their bones to oblivion: their works they have bequeathed to the human race. Amid the thousand objects that are constantly before the mental eye, in this new moral creation, none is more wonderful or more alluring than the existence of more than a thousand seminaries of education, where, less than thirty years past, stood no mansion of civilized man.

In this as in every other of my works, I have given my naked reflections to the sevent.

less than thirty years past, stood no many of civilized man.

In this as in every other of my works, I have given my naked reflections to the reader. Too muck of my life has been spent in actual traveiling, to admit the order and polish of a writer who enjoyed more closet leisnie; but to relate what I saw needed no, a finished erudition; it demanded respect for truth and human esteem; a respect, the sense of which I trust never to lose, until I cease to exist among mankind.

MM, DARBY.

New Obleans, March 26.—The following list comprehends only a portion of the houses that have lately failed in France and England, in consequence of the fall of the French funds, in consequence of the fall of the French funds. This depreciation of the price of the fauld is not to be ascribed as some persons have alleged, to any general apprehension of the instability of the government, but to the extravagant prices that were paid for the stock that went to make up the contributions to the allies.

Communicated for the Baltimore Fed. Gazette.

MANILLA, NOV. 12, 1818.

Having been appointed by our government, Consul at this place, and having concluded to transact commission business, I take the liberty to communicate to you such information respecting the trade of this port, as may be serviceable to you, should you think proper to engage in it. The increasing produce of Manilla, particularly in the article of sugar, offers in my opinion better prospect for speculation in this article than in any port in India. The quality is not I believe exceeded by any mannfactured this side the Cape of Good Hope, and for ensuing years may safely be calculated in being had at S7 the picul of 142 lbs. English, at the highest. Nine American ships have

for ensuing years may safely be calculated in being had at S7 the picul of 142 lbs. English, at the highest. Nine American ships have taken entire cargoes during the last 6 months; and the average price has been 63 since my residence here; that price has 6 netnated between 53 and 63, and never exceeded 5.74.

Besides the vast increase in the article of sugar, we shall be able in three years (owing to a late regulation of this government) to export from 15 to 50 000 piculs of coffee, which is called by good indges superior to that exported from the Island of Java.

The indigo of Manulla is likewise improving; the manufacturers appear to be aware of the bad character this article sustains in Europe and America, and they seem determined if possible, to re-establish its old character, by paying it more attention than they have done of late years. The export of the cottan of this island is likewise rapidly increasing, and when well known in Europe, will I have no doubt be considered equal to the Sea Island.

Another consideration peculiar to this island is that deobioous are always current at

Austher consideration peculiar to this island is, that doublooms are always current at 16 dollars, and the duties of import very tri-

From a long residence at this place, and From a long residence at this place, and from an habitual acquaintance with the mode of trade, in addition to my being the only American established nere. I trust my claims to the patronage of my countrymen are not exceeded by those of any resident here; and should my friends think proper to allow those claims. I have only to offer them my best exertions for their interest. I remain respectfully, your post obselfent servant.

ANDREW STEUART.

ANECDOIE OF BONAPARTE.

A new periodical work, published in Ediubargh, gives the following incident:—" Bonaparte accompanied Mr. West (the great painter) to view the marbles in the Louvre.—
Pointing to the bust of Hannibal, he said he was the greatest man of all antiquity; then turning briskly to Mr. West, he added, and General Washington is the greatest of the moderns." moderns."

Cheap legislation seems to be rapidly coming into vogue in the state of New York. The following advertisement from one of their late papers is one of several similar appeals lately made to the people.

To the free and independent electors of the county of Greene:—Permit me to claim your attention, while I offer you a few reasons for proposing myself as a candidate for member of Assembly. In the first place, then, my name is Jerry Blake—by trade kam a cooper—I amout of stock, and have no money to buy more; of course I am out of business, and can afford to work cheap. I have been a uniform republican, and opposed to Banks. I am a friend to enter I reform, and opposed to lawyers; having twice (through their means) had my tools seized to pay my rent. Having never been honored by being chosen even a delegate to attend a convention, I am opposed to cancus nominations; and like this mode. I am friendly to free schools; and should like to have them free; and having now nine children I think no one will doubt it. I am friendly to inhand navigation, and opposed to Steam Boats, as I occasionally serve as a hand or a cook on hoard a sloop. I am opposed to high salaries, though I pay no taxes. I am willing myself to work as cheap in Albany as I do here; and will if elected, provided I can have my first month's pay in advance to buy myself some clothes, serve you forsix shillings a day and be found, or ten shillings and find myself.

The public's humble servant,

JEREMIAH BLAKE.

Catskill, 12th April, 1219.

The legislature of Illinois have passed a law regulating the rate of interest at six per cent.

- authorising the contracting parties however, to agree specially upon any greater or less rate, of interest, and such agreement is made good

WRITING INK.

The following is M. Ribancourt's recipe for making Writing Ink:

Take eight onness of Aleppo galls, in coarse powder; four onness of logwood, in thin chips; four onness of sulphate of iron (green copperas;) three onness of gamarabick, in powder; one onnes of sulphate of copper (blue vitrio!) and one onnee of sulphate of copper (blue vitrio!) and one onnee of sulphate of copper (blue vitrio!); and one onnee of sulphate of water for one hour, or till half the liquid has neen evaporated. Strain the decoction through a hair seive, or litune folch, and then add the other ingredients. Stir the mixture till the whole is dissolved, more especially the gam; after which, leave it to subside for 24 hours. Then decaut the ink and preserve it in bottles of glass or stone ware, well corked.

The following will also make a good ink: To one quart of soft water add four ounces of galls, one onnee of copperas roughly hruised, and two ounces of gum arabick. Let the whole be kept near the fire a few days, and occasionally well shaken.

Red Writing Ink is made in the following manner: Take of the raspings of Brazil wood a quarter of a pound, and infuse them two or three days in vinegar.—
Boil the infusion for an hour overn gentle fire, and afterwards filter it while hot. Put it again over the fire, and disselve in it, first, half an onnee of gum arabick; and afterwards, of alum and white sugar, each half an onnee.

Sympathetic Inks are such as do not appear after

and afterwards, or annument where sugar, each unit of onnice.

Sympathetic Inks are such as do not appear after they are written with, but which may be made to appear at pleasure, by certain means to be used for the purpose. A variety of substances have been used for this purpose; among which, the best are the following: ing : Dissolve some sugar of lead in water, and write with

this purpose; among which, the best are the fellowing:

Dissolve some sugar of lead in water, and write with the solution. When dry, no writing will be visible....
When you want to make it appear, wet the paper with a solution of alkaline sulphuret, (liver of sulphur) and the letters will immediately appear of a brown color.—Even exposing the writing to the vapours of these solutions will render it apparent.

2. Write with a solution of gold in aqua regin, and let the paper dry gently in the shade. Nothing will appear; but draw a sponge over it wetted with a solution of tin la aqua regia, the writing will immediately appear of a purple color.

3. Write with an infusion of galls, and when you wish the writing to appear, dip it into a solution of green vit riol, and the letters will appear black.

4. Write with distilled sulphuric acid, and nothing will be visible. To render it so, hold it to the fire, and the writing will instantly appear black.

5. Juce of lemons, or onlons, a solution of sal amoniac, green vitriol, &c. will answer the same purpose, though not so easily, nor with so little heat.

6. Green Sympathetic Ink.—Dissolve cobalt in nitro muriatic acid, and write with the solution. The letters will be invisible ill held to the fire, when they will appear green, and will again completely disappear when removed into the cold. In this manner they may be made to appear and disappear at pleasure.

A very annusing experiment of this kind is, to make a drawing representing a winter scene, in which the trees appear devoid of leaves, and to put the leaves on with this systematic ink; then holding the drawing near to a fire, the icaves will begin to appear in all the verdure of spring, very much to the surprise of those who are not in the secret.

who are not in the secret.

IVORY.

Many of our readers who are familiar with ivory mensils and ornaments, are not aware of the manner in which they are or can be formed from the solid bone of the elephant's tusks. The following is one of the methods of rendering this substance ductile and manageable in the hands of the artist.

[Philadelphia Union.]

Ivory and other bones will be rendered soft by laying them for twelve hours in aqua fortis, and then three days in the juice of beets, by which they will become so soft that they may be worked into any form. To har den them again, they should be laid in strong whiegar, it was said by Disacorides, that by boiling ivory for six hours with the root of mandragoras, it will become so soft that it may be managed at pleasure.

AMERICAN ORRERY.

Astronomical Machine.—Several gentlemen of Albany united in a petition to the Legislature of the state of New York, for aid in the completion of an astronomical machine, invented by Mr. Newell, of Waskington county. The following report, made on this subject, in Assembly, by Gen. Root, on the 6th inst. will afford an idea of its ingenious mechanism. The provision recommended in the report, we are happy to say, was made by the Legislature; and the scientific world are thus likely to be benefitted by the labors of an obscure and poor, though ingenious citizen. [Albany Argus.]

"ASTRONOMICAL MACHINE."

"The committer cyport, that they have examined the said machine, and find it all ingenious piece of machanism, well deserving the attention of the public. The earth, with her attendant satellite, and the inferior planets are made to revolve around the sun, very nearly in proportion to the true time of their revolutions in the heavens. The earth, by an ingenious combination of mechanism, is made to revolve in an ellipsis, with the AMERICAN ORRERY.

earth, with her attendant satellite, and the inferior planets are made to revolve around the sun, very nearity in proportion to the true time of their revolutions in the heavens. The earth, by an juganions combination of mechanism, is made to revolve in an elipsis, with the proper inclinations of the poles, and at the true angle from the plane of the ecliptic, so as to give, with accuracy, the variations of the seasons, and the difference between sideral and solar time—It revolves on its own axis, and by means of an index, gives the hour of the day. The various revolutions are governed by a revolving armillary sphere, which gives the solatices and equinoxes, a. d the signs and degrees of the Zodiac.

The ingenuity of the inventor has placed the plane of the moon's orbit at the true angle from the plane of the moon's orbit at the true angle from the plane of the caliptic, and by that means he gives her northings and sonthings pretty correctly; and although she is not made to revolve in an clippin, and thereby to give the nodes and fibrations with accuracy, yet he gives her apogue and perigee, and her various situations and bearings, in such manner that, by the aid of a proper instructor, the sindent may soon obtain correct notions of her various phases and eccentricities. It is the declared intention of the inventor to calarge his machine, and give the revolutions of the exterior planets. The same principles, that object can be effected, and that it might be carried still intiter, even to the revolutions of the same principles, that object can be effected, and that it might be carried will into a proper and salary. This machine, when improved and enlarged, according to the present views of the inventor, will, in the opinion of the committee, equal, if not excel any orfery, that has ever come to their knowledge, in facilitating the study of the elevating and sublime science of signonomy.

Conflied to a price will probably bring it within the reach of most of the academics in this state. Mr. Newell has not the mea

FIFTY DOLLARS REWAND.—Ranaway early in the month of November Jast, from the subscriber, liv-

PIFTY DOLLARS REWARD.—Ranaway-carly in the month of November last, from the subscriber, living near Warminster, in the country of Nelson, two likely slaves, AARON and CRITTA:—

Aaron was seen the last of November, with a free pass, near Columbia : on his way, it is believed, to Richmond: and where, it is probable, he now is: having some relations and acquaintances there. He is a bright mulatio, 35, years of age, about 5 feet 6 or 7 inches high, left handed, remarkably parrot toed, with two yery visible scars on his face, one on his left jaw, the other under his right eye. When spoken to, he is generally harried, if not strumering in his utterance.

Critta, the wife of the abovementioned fellow, is of dark-complexion, small stature, with nothing very distinguishable about her, except a downcast look when spoken to, and rather a drawing manner of speaking.

Twenty Five Dollars will be given for the apurchension and delivery to me of either of the said slaves; and Fifteen Dollars for each, (paying all reasonable charges) if secured in any jail so that I get them again.

April 29. 112. If SANUEL I. CABELL.

Office.—This is to give notice to all whom it may consider myself bound by any contract or contracts which may be made by George Blakey, Esq. of the consider myself bound by any contract or contracts which may be made by George Blakey, Esq. of the consider myself bound by any contract or contracts which may be made by George Blakey, Esq. of the consider myself bound by any contract or contracts which may be made by George Blakey, Esq. of the consider myself bound by any contract or contracts which may be made by George Blakey and myself, or any third person, for the benefit of said Blakey or his children. All persons indebted to me, will make payment to me in person, as I shall not consider my selbtor exonerated from his debt by any receipt hereafter to be given by said George Blakey.
