Save the Babies.

INFANT MORTALITY is something frightful. We can hardly realize that of all the children born in civilized countries, twenty-two per cent, or nearly one-quarter, die before they reach one year; thirty-six per cent, or more than one-third, before they are five, and one-half before they are fifteen.

We do not hesitate to say that a timely use of Castoria would save a majority of these precious lives. Neither do we hesitate to say that many of these infant deaths are occasioned by the use of unadulterated preparations. Drops, tinctures and soothing syrups sold for children's complaints contain more or less opium alkaloids. They are, in considerable quantities, deadly poisons. In any quantity they stupify, retard circulation and lead to congestion, sickness, death. Castoria operates exactly the reverse, but you must see that it bears the signature of Chas. H. Fletcher. Castoria causes the blood to circulate properly, opens the pores of the skin and allays fever.
