Sensible Letter from a Truly Good Grafton Girl. We published a few days ago a dispatch announcing the murder of a young man at Bloomington, Illinois, named Albert Angles, who it seems by a Bloomington paper received yesterday, was from Brown's Creek, Harrison county, W. Va. Among the papers found on him were a number of letters from a young lady named Flora C. Coleridge. These letters bore the post mark of Grafton, W. Va. The Bloomington paper publishes one of them as a specimen of the correspondence, and commends it to its readers as "in point of innocence and maidenly modesty a model letter. It reads as fol-

GRAFTON, W. VA., Sept. 8. PRIEND MR. ANGLER: -I will try to answer your letter. It is a great task for me to sit down and write to any one, Although it is quite an improvement to

me.
I started to school last Monday, but on the account of seats my room had to dismiss till this week. I think I will like my teacher. Mr. Obrion is his name. He is the principal of seven rooms; so you can guess it keeps him pretty busy. I suppose you have gone to the Fair ere this. You did not state what day of the I was at Mr. Cole's show last night;

I was at Mr. Cole's show last night; which I enjoyed very much. It was a good show. It will show at Clarksburg to-morrow. I do not know how they will manage. Show and Fair comes together. No. I shall not go to the Clarksburg Fair. I never was at a fair and do not want togo.

Grafton fair is 18, 19 and 20. I do not know what I will go at all. I have no desire to go. The strike is over and the soldiers are gone. I do not know that I will go at all. I have no desire to go. I do not there I would give most anything if I could perform on an organ or pisno out there. I would give most anything if I could perform on an organ or pisno like I have seen some ladies. About Sabuth School, why don't you go oftener and try to make it more interesting. I go to Sabbath School twice a day and meeting also.

It appears to be difficult to arrive at the cost of insing the electric light, figures of estimates in different experiments varying considerably. In many manufacturing establishments the cost of the power to drive a magneto electric machine would scarcely be felt, as only two ar three horse-power at the most would be required.
