TORTURING HUMOR

Body a Mass of Sores-Called in Three Doctors But Grew Worse-Cured by Cuticura For 75c.

"My little daughter was a mass of sores all over her body. Her face was being eaten away, and her ears looked as if they would drop off. I had three doctors, but she grew worse. Neighbors advised Cuticura, and before I had used half of the cake of soap and box of ointment, the sores had all healed, and my little one's skin was as clear as a new-born babe's. I would not be without Cuticura if it cost five dollars, instead of 75 cents, which is all -it cost us to cure our baby. Mrs. G. J. Steese, 701 Coburn St., Akron, Ohio." North America is Awake.

There are 27,800 miles of railway now in full operation in South America, and Argentina has 11,000 of these miles. This is only one sign of what has consistently been done by successive governments in those muchtroubled republics.

Against Rate Reduction. Atlanta, Ga.-The recent proposition of J Pope Brown, Chairman of the Georgia Railroad Commission, to reduce the passenger rate in Georgia from three to two cents per mile was protested against by the Brotherhood of Locomotive Engineers, the Order of Railway Conductors, and unions of the blacksmiths, machinists and telegraphers, boilermakers, railway train men, carpenters and joiners, clerks and car men. These organizations employed an attorney especially to represent them, who urged that such a reduction would work against the prosperity of the State and lead to a reduction in the number of railroad employes as well as of their wages. The Travelers' Protective Association also protested that a reduction as proposed would result in

It takes more than glucose honey to hold people to the church.

fewer trains and poorer service.

Is it right for you to lose \$4.20 that a dealer may make 50 cents more by selling fourteen gallons of ready-for-use paint, at \$1.50 per gallon, than our agent will make by selling you eight gallons of L. & M., and six gallons of linseed oil, which make four-teen gallons of a better-paint, at \$1.20 per gallon? Is it right?

The Crop That Never Fails. I know of only one sure crop on the farm that never fails, no matter what the weather or the condition of the soil, and that is the weed crop. The past season has been very favorable for this crop, and an abundant yield of seed is sure to follow, so that we may expect a large weed crop next summer. On occasional farms there are comparatively few weeds, except those in fence corners, along the roads, or in places not cultivated or grazed by sheep. These places on our farms should be looked after, the weeds cut and left on the ground, if green; if ripe, burn them. It is surprising how many such weeds can be destroyed in a short time by a good scythe in the hands of a man who knows how to use it. Along the road, weeds are left to go to seed, and cause trouble to adjoining fields that would doubtless have been almost clear of weeds .-Louis Campbell, in The Epitomist.

About Apple Trees. Mr. E. A. Seasons, an orchardist of Madison, Ohio, gives us the following interesting experience with apple

This being an off year of my Baldwin trees. I decided to experiment with them, and gave each of two trees, as early in the spring as frost permitted, an application of two pounds each of fine ground bone and muriate of potash. The middle of April about two pounds of nitrate of soda was scattered under each. Two adjacent trees of the same variety were left unfertilized. With the coming of the leaves the effects of the fertilizers were apparent. The trees which were fertilized produced glossy, dank green foliage, and the fruit was much above the average of size in other years, or a most brilliant color and of the finest eating quality, and exceeded the quantity produced by the untreated trees, whose fruit was of inferior quality, small, tough and, to some extent, scabby. On the untreated trees the early foliage was a sickly color and very slow in appearing, as were the blossoms, which were not at all abundant.-Up-to-Date Farming.

Chicken Chatter.

Don't buy cheap food; buy the best,

Fat hens are not laying hens. Common sense is a good stock in

yourself. Regularity and cleanliness is an excellent motto. Look to the diet of your hens if you

wish "quality" in eggs. Don't crowd; better sell some of the birds and make room. Remove the droppings and burn

them immediately if the chickens have Eggs don't happen, it takes study and care to have them in abundance,

remember. In killing fowls never do so before the rest of the flock as it is apt to frighten them. See that the laying hens have plen-

ty of water as they need that as much as they do food. When eggs have two yolks, you

assure yourself that the system of feeding is wrong. Let the fowls run in the orchard

and there will be less insects for you to contend with. Never let late hatched chickens run or be fed with older chickens, or they will be trampled and half starved.

The Apiary.

There are a few things which must be kept in mind to insure success. I will briefly touch these points. The first rule, which has very appropriately been called "the golden rule of beekeeping," is that you must keep your colonies strong at all times, if you wish to get a honey crop. Keep this in view always and work for it.

The second thought or rule, and one very closely related to the above is in relation to the queen. A good prolific young queen is necessary at all times. You should see to it that your queens do not outgrow their usefulness, a queen over two years old, as a rule, becomes unprofitable, as the queen is the life of the colony, it is very essential that this matter be considered very carefully.

The hive is a very important mat-

Here are the points to consider in a hive: First, success in wintering; second, amount of comb honey obtained; third, ease and speed of manipulation. L. L. Langstroth, the father of modern bookkeeping came very near solving all those points, or at least the first two, successfully. His ideas on those two points are the best known today. His hive has been changed slightly to secure the third, so that his hive, all things considered gives the best results of any hive in use today. Each manufacturer has some pet hobby or theory to catch the fancy: but for safety in wintering and results give me the Langstroth hive adapted for pound sections. A common mistake with beginners

is to think that they can improve the standard hives. Don't try it. If you want to make your own hives, send to some factory and get a sample hive all nailed and fitted up, and make your hives exactly like it. Each piece and space has been carefully thought out and tested and means something .-George W. Williams, in The Indiana

Best Cow Liked Alfalfa.

In his interesting reference to the Jersey cow test at St. Louis, Mr. Van Pelt, under whose charge it was conducted, in the Jersey Bulletin refers to the great Jersey cow that stood at the head. He says:

Perhaps no cow in the whole test was so much a subject of habit as No. 37, that averaged 42 cents a day net profit in butter alone. It will be noted by the feeding tables that her ration differed from the other cows and differed greatly in its own composition at different times. She was particularly fond of alfalfa hay, and ate more by far than any other cow in the test; and, together with corn meal and oats, would respond more readily to these

than with any other food stuffs. If it happened that oats had been rolled and the hulls removed, so much the better. This was her great sin. A HEW CARD TRICK | FIVE CARDS Even though rolled oats could be pur-Tips of Fingers instantly disappear; the same money as ground oats, it was Cards immediately produced again thought by some that a cow should from any place performer desires, Full not eat the same food that they theminstructions by mail for \$1. Yet it was given the name of "breakfast food," and one feeder, rather than feed that which had been given such an unpractical

a quality that upon being analyzed by the chemist were found to be all hulls and almost entirely indigestible?

It was also found necessary to study the particular likes and dislikes of this cow in how and when she was watered, exercised and milked; and it is only fair to assume that had her peculiarities never been found and catered to she would never have produced the amount of butter she did, nor stood at the head of the list as the best dairy cow of any breed. Yet how often we find it the case that the very best cows, with their dairy instincts developed to the highest degree, are the ones which need the greatest amount of special care!-Indiana Farmer.

Value of Irrigation.

"The most important factor in growing crops is soil moisture," says Farm Stock Journal. "Poor soil will grow good crops if water is supplied in just the right quantity at the right time, while the very best soil will produce nothing without water.

"Although agriculture is hundreds of years old the minor details have received all or nearly all of the consideration of agriculturists up to the present time. The most important of all, that of the regulation of soil water has received the least attention. Experiments on a large scale here and there with irrigation works in sections of the country where rainfall is supposed to be sufficient also have proved very profitable.

"The probabilities are that auxiliary rrigation works for intensive farming in the near future will receive the attention that it should. Of course artificial irrigation in rainy sections of the country on large farms in all probability will be out of reach for practical use. Throughout the thickly settled portions of the east and middle states, especially near large markets, such crops as strawberries, potatoes, cabbage, in fact almost all trucking crops could be grown under irrigation to advantage. In many places the cost of irrigation would be very slight as the water supply is now going to waste through small or large streams that could be run by gravitating to the land or lifted at slight expense by wind or power. The necessity of growing larger crops is becoming more pronounced every year. Experiment stations are working out problems in irrigation and sub-irrigation that are extremely interesting. In southern sections, where two or three crops may be grown on the same land within the year, returns would be better than in the north, where only one crop usually is grown. But some means for increasing the output of land on the

smaller farms and in trucking districts must come soon. "A great deal has been done of late years to conserve the natural rainfall with the result that better crops are grown simply by better cultivation. The habit of keeping the ground loose on top to prevent evaporation is growing and extending each year. The value of rotation to prevent a plentiful better farmers everywhere. It is now well known that soil containing plenty of humus also contains sufficient moisture for the needs of all crops when rainfall is abundant. When the soil is very loose water is not brought up from below with sufficient rapidity to feed the roots of growing plants. In such soils probably no means of supplying moisture will be found until irrigation is tried. But other soils having a clay subsoil and furnished with

IT MAY NOT KAVE BEEN SUICIDE

Coroner's Physician O'Hanlan Says His Opinion Regarding the Cause of Caesar Young's Death Has Undergone a Change.

New York, Special.-Perhaps the most interesting development in the testimony in the trial of Nan Patterson charged with the murder of Caesar Young, came when Coroner's Physician O'Hanlon took the stand for the prosecution and said in reply to questions, that he had changed his opinion that Young committed suicide. Dr. O'Hanlon performed the autopsy on Young's body. In his testimony today, he said: "My present opinion is not the opinion formerly expressed to Coroner Brown."

The counsel for the defense, Lawyer Levy, asked the doctor: "Did you report this case to Coroner Brown as one of suicide?" When Dr. O'Hanlon replied in the

affirmative, Mr. Levy asked: "Do you now say that in your best judgment it is a case of suicide?" "No, I won't say that."

"Didn't you say so once?" was

"I did, but I think now it is a case for the jury to decide. I thought at the time that I detected powder marks on the hands of Caesar Young." Assistant District Attorney Rand

produced the official report of Dr. O'Hanlon, which did not define the case as one of suicide and the doctor said that he simply expressed the suicide opinion in conversation with Coroner Brown. After some further questioning Mr. Rand asked the witness if he still held the same opinion that he expressed to Coroner Brown and Dr. O'Hanlon replied: "I will only say this, my opinion now is not what it was when I talked to Coroner Brown." This incident came at the close of the

day's proceedings in the trial. When court opened Miss Patterson appeared in a black and white checked dress in direct contrast to the mourning costume which she had worn during days of this and previous trials. At today's session Police Captain Sweepey told of a conversation he had with Miss Patterson soon after her arrest in which she said she had put her hand in Young's pocket after the shot had been fired, had looked at the revolver and then dropped it back in the pocket. The scenes on West Broadway where

by witnesses and the cab driver who was on the box when Young was shot was on the stand, but the testimony at the previous trial. When Frederick Michaels, the cab driver, was asked why he did not look in the cab when he heard the shot fired, he replied: "It wasn't my place. Suppose I had looked in and got shot?" Dr E. M Riggin, formerly of the Hudson Street hospital, testifled that

the bullet which caused Young's death

the shooting took place were gone over

entered the left side and after striking the backbone lodged in the muscles of the back. While Dr. Riggin was being examined a headless and legless rieleton was brought into court. Lawyer Levy strenuously objected to the introduction, saying that it was unnecessary and tended to prejudice the case against the defendant. Miss Patterson was visibly affected. After Dr. Riggin had indicated on the skeleton the course of the bullet which killed Young, Mr. Levy, counsel for the prisoner, asked that he illustrate the position in which the revolver must have been held to produce the wound. "I could not do it at the point I have indicated," the witness replied, "because I could not twist myself into such a

14 Die in Convent Fire. Montreal, Special.—The little village of St. Genevieve is in mourning over the loss of 14 lives in a fire, which destroyed the convent of St. Anne there early today. One nun, nine children, ranging in age from 10 to 18 years, and four old women perished in the flames. Two nuns were so severely burned that it is feared that they will die. In their grief over the catastrophe, the villagers find some comfort in relating the heroism displayed by Sister Marie Adjuteur, who gave up her life, and Sisters Marie Therese and Marie Robertine, who were perhaps fatally burned in their effort to save the lives of the children and helpless old women in their

FISH BRAND Makers of Warranted Wet Weather Clothing "I tried all kinds of blood remedies which failed to do me any good but I have found the right thing at last. My face was full of pimples and blackheads. After taking Cascarcts they all left. I am continuing the use of them and recommending them to my friends. I feel fine when I rise in the morning. Hope to have a chance to recommend Cascaracts."

--- TO FARMERS AND POULTRYMEN! ---

HICKENS EARN MONEY If you give them help.
unless you understand them and know how to cater to their requirements, and dollars learning by experience, so you must buy the knowledge required by others. We offer this to you for only 25 cents. You want them to pay their own way even if you merely keep them as a diversion. In order to handle Fowls judiclously, you must know something about them. To meet this want we are selling a book giving the experience of a practical poultry raiser for (Only 25c.) twenty-five years. It was written by a man who put all his mind, and time, and money to making a success of Chicken raising—not as a pastime, but as a business—and if you will profit by his twenty-five years' work, you can save many Chicks annually, and make your Fowls earn dollars for you. The point is, that you must be sure to detect trouble in the Poultry Yard as soon as it appears, and know how to remedy it. This book will teach you. It tells how to detect and cure disease; to feed for eggs and also for fattening; which Fowls to save for breeding purposes; and everything, indeed, you should know on this subject to make it profitable. Sent postpoid for twenty-five cents in a samps, 5-90K PUBLISHING HOUSE, 124 Leonard St., New York City The end came almost unexpectedly the immediate cause being the breakelection, prohibition won by 33 majori-
