BEES AND HONEY.

dead some little time before the bees took up their shook in the carcass, for it is surpossly stated that, "after a time," he returned and saw the bees and the house in the time's carcass, the state of the carcas, the state of the carcas of the part of the carcas, the state of the carcas of the carcas, the state of the carcas, t

Men and Their Places.

wear and tear of nariety for fear Pilliess my place."—Becton Post.

The boy's philosophy was good, though carried to an absurd degree. The world and the people would be better and happier but for the desperate strain and struggle to "keep at the head of the class." To strive honorably for pre-eminence is commendable just so long as it does not involve impossibilities. That is, when the individual aspires to an elevation for which he is not fitted and for which he can never hope to be qualified, he is guilty of injustice to himself as well as to the world for not doing well what he can do. Many a man, having insinuated his way into a position above his abilities, keeps his place only by a fever-heat struggle that costs more than the place is worth. Better for him and his kind if he finds a niche somewhere in life's work, into which he would fit naturally Better for him and his kind if he finds a niche somewhere in life's work, into which he would fit naturally and easily, and in the possession of which he would feel so secure in the confidence of his qualifications that the enjoyments of life could be relished at leisure. He who finds that his work drives him instead of being nushed by the time of the rebuilding of the Temple of Jerusalem, speaking of the possaries of life, mentions honey, with flour and milk. Solon, in the par 600, B. C., enacted a law, requiring that bee lives in cultivated feet apart. Honer, Herodotas, Aristotic, Cato, Varro, Virgil, Pliny, Columella, and other ancient sages, composed poems, extelling the activity, skill and sconony of bees. The celebrated Clilica and any stream of the subject of bees and honey, some five andred years, B. C.—but that work is lost to us. The Yersians, Grecians and Roman sused honey quite extensively as an article of diet; they also used it largely in preparing the food, and by it most of their beverages were sweetened. More than three thousand years ago, it is said, Samson proposed this riddle to the Phillstines: "Out of the externance forth sweetness," and gave them seven days to expound it. They are made to have been unable to explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and all her kindred, they extorted the explain it, and by threats of burning his wife and the sum of the explain it, and by threats of burni

The Flames of Etna. A correspondent of the London Times, writing from Naples, gives some interesting details of the eruption of Mount Etna: "At Reggio and Messina showers of sand and lapilli fell. But so dense was the cloud of smoke and fine ashes in which the mountain was so dense was the cloud of smoke and fine ashes in which the mountain was enveloped that even at the foot of Ætna, only occasionally, when there was an opening in the cloud, a vast column of fire could be seen ascending from the principal crater. The obscurity, however, in which everything was involved served to render the scene more alarming. The truption commenced on the night of the twentieth of March, and from three o'clock in the morning till six o'clock on the following morning ninety-two undulating shocks of earthquake were feit. They continued after that time, though with less violence, till, on the night of the 23d, two terrible shocks were feit at Nicolosi, and another on the night of the 23d. It would appear that this great commotion was the prelude to a yet greater eruption, and, indeed, cloven new months were opened above Nicolosi, which vomited forth sand, scorie, lapilli and a dense smoke with fearful roarings. The activity of these mouths is not very great, which is regarded as an indication of yet greater disasters. Many families have abandoned the points most threatened, as Nicolosi and Belpasso, but those who remain sleep in the open air, and the troops who have been sent are engaged in erecting tents or breaking down walls and houses in danger of falling. Great exertions are made to keep the people from the churches, which on the occasion of such awful events are always sure to be crowded. A sense of security is felt within these sacred buildings, though there are no places where there is greater insecurity. Happily, no human victims are reported up to the 23d; and it may be explained by the fact that shocks of earthquake occurred principally by day, when people were on the alert. But much damage has been done to property. In some small villages on the middle of the mountain houses have been thrown down, and a little chapel at Macchia has fallen. At Zaffarana six houses were ruined, and the facade of the church, while the barracks of the Carbineers were fissured. Other churches and houses are enveloped that even at the foot of Ætna bipeers were fissured. Other churches and houses are reported to have beet damaged, but it would be an endles task to note all. Wherever building are in a dangerous state orders are given to demolish them directly. Further intelligence is anxiously expected; for though there was a short cessation of the shocks, and people in some places were resuming their usual occupations, the mountain was discharging its contents abundantly, and no one could say that the danger was entirely

Underground and Submarine Wires

could say that the danger was entirely

Underground and Submarine Wires.

Wires are almost invariably carried underground through towns. Copper wires, insulated with gutta-percha, encased in iron pipes, is the material used. There are 12,000 miles of underground wire in the United Kingdom. There is a great cry for more underground work in England, owing to the destruction of open lines by gales and snowstorms but underground telegraphs, wire for wire, cost at present about four times as much as overground lines, and their capacity for the conveyance of messages is only one-fourth; so that overground are, commercially, sixteen times better than underground wires. To lay the whole of the Post-office system under ground would mean an expenditure of about £20,000,000. Hence there is no desire to put wires under ground except in towns. Besides, snowstorms are few and far between, and their effects are much exaggerated. Of the are few and far between, and their effects are much exaggerated. Of the numerous materials and compounds that have been used for insulating purposes, gutta-percha remains the oldest and the best for underground purposes. It, like all other materials used for telegraphy, has been improved vastly through the searching power that the current gives the enginineer.

The past ten years has seen the globe covered with a network of cables. Submarine telegraphs have become a solid property. They are laid with facility and recovered with certainty, even in the deepest oceans. Thanks to such expeditions as that of H. M. S. Challenger, the floor of the ocean is becoming more familiar than the surface of many continents. There are at present and company continents.

many continents. There are at present 80,000 miles of cable at work, and £30 000,000 have been embarked in their es-500,000 have been embarked in their establishment. A fleet of twenty-nine ships is employed in laying, watching, and repairing the cables. The Atlantic is spanned by nine cables in working order. The type of cable used has been but very little varied from that first made and laid between Dover and Cable has the cabendary of the made. Calais; but the character of the mate Calsis; but the character of the materials, the quality of the copper and the gutta-percha, the breaking strain of the homogeneous iron wire, which has reached ninety tons to the square inch, and the machinery for laying, have received such great advances that the last cable laid across the Atlantic, by the Telegraph Construction and Maintenance Company, was done in twelve days without a hitch or stoppage.—
Nature.

A "Retainer" Explained. The following anecdote is related of Daniel Webster: When Webster was at the zenith of his career, one day a gentleman waited upon him to engage him for the defense in an important case at law—the amount at stake in the suit being \$80,000. Having stated the case from his point of view, Mr. Webster said he was willing to take it; but the client could not tell exactly when the case would come on. "Very well." said Webster, "if you retain me for the defense, I will hold myself in readiness, and not engage for the plaintiff." The gentleman asked what the retaining fee would be? "A thousand dollars." "A Fromiss and Corrieos, and the hope of obtaining additional supplies, it is supposed, was among the inducements for their investors of Germany."

Thousands and ten of thousands of children are dying all around us who cannot sweetness, crave and caparity demonits the adulterated. "candies" and "sirups" of modern times. If these could be fed on honey, instead, they would develop and grow up into healthy men and women.

Children would rather est bread and honey than bread and bottler; one produces of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, "but I debar myself from accept the second of the Bonana, and the second of the Bonana, and the Bonana, "but I debar myself from accept the second of the Bonana, and the Bonana, and the second of the Bonana, and the Bonana, and the second of the Bonana, and the Bonana, and the second of the Bonana, and the Bonana, and the second of the Bonana, and the

A PLEASANT LETTER.

It Rings of a Grateful Heart and gives Mr. William W. Chadwich, of Hatchville Conn., writes under date of June 14, 1880, to Dr. Kennedy, to say that the use of "Kenne-dy's Pavorite Remedy" has cured him of Gall Stone, from which he had experienced everything but comfort for a long time. Mr. Chadwich feit wholly cured when he wrote, and says: "I have had no pain for six months, and have also regained my flesh and can stand a fair day's work. I recommend Kennedy's teranged liver." Grateful patients are common' Dr. Kennedy is daily in receipt of letters from them, expressing similar sentiters from them, expressing similar sentiments. These letters are spontaneous and put in all varieties of phraseology, but invariably setting forth one thing—the value of "Kennedy's Favorite Remedy" for many forms of disease. It may be just the thing you have been looking for. Is your liver disordered? Have you Derangement of the Kidneys or Bladder, associated with Constipation of the Bowels' If so, you want "Kennedy's ravorite Remedy." Dr. Kennedy practices Medicine and Surgery in all their branches. Write and state your case frankly. Letters promptly answered. Address Dr. David Kennedy, Rondout, N. Y. "Dr. Kennedy's Favorite Remedy" for sale by all druggists. OF ANOTHER AGE. Gradually Supplanted By a Better Artic Certain Old Things Are Done Away.

Herald.

—If new paper is to be put on the walls, and there is any doubt as to the quality of the coloring matter on it, take a piece to the chemist. He can readily determine by a simple test whether it is loaded with arsenic or not.

N. Y. Examiner.

Fruit put up in tin oans should be taken out when the can is opened for use. If allowed to remain after the can is opened the action of acid juices upon the tin when exposed to the air may form acetate of tin, which is poisonous.

—Prairie Farmer.

-Many persons who purchase eggs show a decided preference for those that have dark-colored shells. They think their contents are richer. In some eastern cities retailers sort their eggs and ask a higher price for those having finely-colored shells.—Chicago Times.

—To drive away rats, take potash that has been left in the air till it becomes pasty, or incorporate it with soft-

comes pasty, or incorporate it with soft-soap, and smear well all places where they run; or set some of the sbap and potash near their holes, and they will not trouble you long after getting into it.—The Household.

it.—The Household.

—For the sake of variety try this for breakfast: Buy some nice pork chops, with a little fat about them; fry them a delicate brown, and pour hot tomato sauce over them. Make a gravy, using a little of the fat fried out of the pork; send to the table with baked potatoes, warm corn bread and coffee.—Country Gentleman. -Before filling up vacant places in

-Before filling up vacant places in the orchard with young trees it is best to think whether the full grown trees now standing will not, with very good manuring, bring more fruit than a larger number would. Most of our orchards are planted too closely, and the tree roots interlace so as to rob each other of what fertility each should have. -N. Y. Post.

—A bottle of carbolic acid should be kept in every farm-house, not merely as a disinfectant, but as a wash for wounds and sores. For any purpose it should be diluted with water. Its power to destroy fungus growths makes carbolic acid invaluable in pruning or-chards of pear, plum, or peach where blight or other disease is suspected.

Prune pudding: Scald one pound of French prunes, let them swell in the hot water till soft, drain and extract the stones, spread on a dish and dredge with flour; take a gill of milk from a quart, stir into it gradually eight table-spoonfuls of sifted flour; beat six eggs very light and stir by degrees into the remainder of the quart of milk, alterat a time; boil two hours and serve with wine, sauce or cream .- Boston -The old practice of feeding cow

The old practice of feeding cows every three hours, giving the last feed just before retiring at night, has been very generally abandoned. Now the most successful farmers feed only morning and night. The whole morning or evening feed is not put before them at one time, because experience has taught that it is best to put before a cow a small quantity at one time, adding more as soon as it is eaten up, so that the morning and evening meals are made up of several small feeds, perhaps of different materials.—N. Y. Herald.

Some other States tolerated baronial grants, which allowed the land to be absorbed by great proprietors, but the result was disastrous. Our older readers recollect the fierce contests between the Anti-Renters of New York and the patroon. An amendment of the State Constitution had to be made of overgrown estates before a deadly found, which menaced the peace of the State, could be healed. Well did Wendell Phillips say: "Capital shrieked Pillage and agrarianism," but none the less did the Empire State accept a Barn-burner Constitution." And our National Legislature, by homeour National Legislature, by homeour State laws, has sought to multiply the class of landholders. It has been felt that the more there are who have a direct interest in the tilling of the soil, the larger the class of those who give a hostage to order.

A CARD.

age to order.

At times we have felt a fear of the At times we have felt a fear of the mischievous results of the purchase of large sections of land by capitalists for wheat raising. A class of bonanza farmers are seeking large returns from the virgin soil of our younger States and Territories. They are unanxious about gathering a class of actual settlers on their broad acres, but desire only laborers. Sowing and reaping require but a few weeks of actual labor, and if they a few weeks of actual labor, and if they can secure work enough to manage their plows, harrows, reapers and binders, it is enough. To provide families with homes is no part of their policy. They can be barons, their laborers serfs or Ishmaelites. This course may purchase large profits to the landholder, however, but it fails to supply intelligent citizens for the State. Happily it cannot be a permanent system. Even if not be a permanent system. Even if occasional droughts or other drawbacks endangered not the profits, the soil would soon become exhausted. It demands diversified agriculture, a rotamands diversited agriculture, a found tion and variety of crops, to exempt a land from ultimate sterility. To man-age successfully, smaller quantities of land must be held by individuals, and

land must be held by individuals, and wisely tilled.

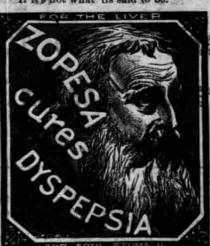

And this brings us to a point of local importance. Complaint has been made that farming towns of New England are fast becoming depopulated. Homesteads that were once occupied by vigorous families are almost forsaken. Houses are tumbling down; gardens are overgrown with weeds; fields are growing up to forests, and everything betokens neglect. Now there are farmers who protest against this policy as suicidal. Not long ago we were talking with a sagacious yeoman. He ridiculed the notion that Rhode Island need depend for its food on distant regions. Our own soil, rightly tilled, can largely feed its people. He shows his faith by his works. He has brought a few acres into a rich garden, whence he draws a revenue of hundreds of dollars. He uses manure without stint, he draws a revenue of hundreds of dollars. He uses manure without stint, obtains the choicest seed, works diligently and skillfully, and supplies an entire village with peas, beets, lettuce, and cabbages. And not content with this, he makes his mowing fields groan under the burden of grass. And what he is doing hundreds of others can do if our sturdy farmers will cling to their patrimonial acres. Let the restless and the immigrant seek the West, but the vigorous son of New England can profitably stick to the home of his fathers.

—Providence (R. I.) Press.

There were 982 fires in Paris last year, and of these forty-seven broke out in shops, thirty-eight in places where alcohol and chemicals were stored and fourteen in theaters. With less than fifty exceptions, all the buildings in which the fires occurred were insured, and in more than 700 cases out of the 982 the furniture was insured as well. The total amount of damage done was estimated at rather more than \$1,500,-000.
