FEMININE HEADGEAR.
The Importance of Going to

Masonic Hall.

When it was a year ago the World published an article on the subject of feminine headgear, we found the average woman of the world was wearing the same kind of headdress that had been in vogue for many years.

Those who wear no headgear at all are equally at fault, for the general rule is that it is better to wear no headgear than to wear the wrong kind. The head should be kept warm and protected from the weather. Some women wear hats that are too tight or too loose, and this is not healthy. A hat that fits too tightly will constrict the blood vessels in the head, and cause headaches. A hat that is too loose will let the wind blow through the hair, and cause colds.

Tools Used in the Construction of a House.

Some women wear hats that are too high or too low, and this is not healthy. A hat that is too high will pull down on the ears, and cause earache. A hat that is too low will pull up on the eyes, and cause eye-strain.

The Importance of a Properly Fitting Hat.

A hat that is too small will not fit properly, and this is not healthy. A hat that is too big will not fit properly, and this is not healthy. A hat that is too wide will pull down on the face, and cause sunburn.
