

NERVOUS PROSTRATION

May be Overcome by Lydia E. Pinkham's Vegetable Compound — This Letter Proves It.

West Philadelphia, Pa. — "During the thirty years I have been married, I have been in bad health and had several attacks of nervous prostration until it seemed as if the organs in my whole body were worn out. I was finally persuaded to try Lydia E. Pinkham's Vegetable Compound and it made a well woman of me. I can now do all my housework and advise all ailing women to try Lydia E. Pinkham's Vegetable Compound and I will guarantee they will derive great benefit from it." — Mrs. FRANK FITZGERALD, 25 N. 41st Street, West Philadelphia, Pa.

There are thousands of women everywhere in Mrs. Fitzgerald's condition, suffering from nervousness, backache, headaches, and other symptoms of a functional derangement. It was a grateful spirit for health restored which led her to write this letter so that other women may benefit from her experience and find health as she has done.

For suggestions in regard to your condition write Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of their 40 years experience is at your service.

Skin Tortured Babies Sleep After Cuticura

Soap 25c. Ointment 25 and 50c.

DAISY FLY KILLER

placed anywhere, attracts and kills all flies, mosquitos, house flies, etc. Made of metal, can't be used over, will not soil or injure anything. Guaranteed effective. Sold by dealers, or sent by express, prepaid, for \$1.00.

MERE HAMMERING MAY WIN

But More Effective Way to End War Would Be to Open Eyes of the German People.

Among the applicants for enlistment in the marine corps the other day was a man with a wooden leg. He gave a demonstration to show that his artificial member could be unscrewed with such celerity as to make it equally useful as a baseball bat with which to wallop the pill in the regimental series or as a war club with which to clout blockheads in raids on the German trenches.

In swinging at the domes of Huns rising stealthily from dugout doors it wouldn't matter if a man did have a wooden leg so long as he had his battling eye with him.

Winning the war, however, is not a matter of battering brains out, but of hammering sense in. It is not a question of knocking on wood, but of opening the eyes of the blind.

It will take more than wooden legs to wind up the affairs of the Hohenzollern regime. — Exchange.

Accounting for it. "That young officer seems very blue." "That may be because he is a submarine."

There are mothers and mothers. One kind turn their children into the street to keep the house tidy.

Love is a capsule in which silly talk is swallowed, thus extinguishing the unpleasant taste for a while.

—No Waste.

Grape-Nuts
answers every demand. It's an economical, nourishing and delicious food, a builder and maintainer of vigor and health.

Try it.
"There's a Reason"

DAIRY THE DAIRY

TREATMENT FOR MILK FEVER

All Dairymen Should Be Prepared to Administer Simple and Successful Remedy to Cows.

(Prepared by the United States Department of Agriculture.)

In view of the fact that milk fever is a very common disease affecting cows, particularly the heaviest milkers in the large dairy district, it is of great importance that dairymen acquaint themselves with the present extremely successful methods of treatment.

The disease more frequently attacks well-nourished, fleshy, heavy-milking cows. It occurs during the most active period of life (fourth to sixth calf), and is characterized by a sudden onset and complete paralysis. One attack does not render the animal immune. It generally follows closely the act of calving and terminates in a short time (usually from 18 to 72 hours) either in recovery or death. While the disease may occur at any time during the year, it is seen principally during the warm summer season. It is rarely, if ever, met with in pure beef breeds.

At the commencement of an attack there is usually excitement, the specialists say. The cow is restless, trends with the hind feet, switches the tail, and walks about uneasily. These symptoms are followed within a few hours by partial paralysis, indicated by a staggering gait, especially in the hind legs. The animal then becomes quieter, more weak, and finally falls down, unable to rise. While down the animal assumes a very characteristic position, which is a great aid in diagnosis. The head is turned around to the side (usually the left) and rests on the chest. On the day following the onset of the disease, and in some cases even within a few hours, the animal may be up eating and drinking in a normal manner. In fatal cases the animal may remain perfectly quiet, being completely paralyzed, until death.

The treatment consists of injecting air through sterile absorbent cotton, preferably impregnated with carbolic acid, into the teats by means of a specially designed syringe. Soap and water should first be applied to the teats and udder, after which they should be carefully disinfected with a five per cent solution of carbolic acid (three tablespoonfuls to one quart of water). Then insert the syringe in the teats and force air in each quarter of the udder. After one-fourth of the udder is well distended with filtered air a broad piece of tape should be tied about the teat to prevent the air from escaping. In case the air becomes absorbed and no improvement is noted within five hours, a repetition of this treatment should be made under the same antiseptic precautions as the first, each quarter of the udder being filled. The air should be left in the udder for 24 hours, and when the recovery is assured it should be gradually milked out. It is best to secure the services of a veterinarian for this treatment, but this is not necessary if the dairymen or farmer has proper equipment and takes due precautions.

GUERNSEY BREED IS POPULAR

Has Maintained Steady Growth and Found in Large Numbers in Eastern and Central States.

(Prepared by the United States Department of Agriculture.)

The Guernsey breed developed on the Channel Islands of Guernsey and Alderney, although probably the parent stock came from Normandy.

Purebred Guernsey With a High Record.

France. This breed has maintained a steady growth in numbers and popularity in the country, and its largest numbers are found in the Eastern and middle Western states.

The characteristic colors of Guernseys are some shade of fawn and white. Cows average about 1,050 pounds and bulls about 1,600 pounds in weight. Guernsey milk is noted for its extremely yellow color and high percentage of butterfat.

In the Guernsey breed the average of 6,200 cows that have completed a year's record for advanced registry is 8,934.44 pounds of milk, testing 4.99 per cent, amounting to 448.01 pounds of butterfat. The ten highest producers of this breed range from 24,008 to 17,297.51 pounds of milk, with an average, for these ten, of 19,337.9 pounds of milk. The ten highest Guernsey butterfat producers range from 1,068.18 to 910.67 pounds, an average, for these ten, of 976.75 pounds of butterfat.

Beware of Drafts. A thermometer should be hung in every stable. Beware of drafts on a sensitive cow.

RODENTS EAT \$150,000,000 WORTH OF FOOD

Sixteen Hundred and Forty-one Dead Prairie Dogs Were Collected From 320 Acres Which Had Been Treated With Poison The Day Before by One Man—Cost, Including Labor, \$9.79—Specialists Teach Farmers How to Mix Poison.

POISONING STOPS LARGE CROP LOSS

Co-operation Among Farmers and All Authorities Concerned Is Necessary.

CAMPAIGN IN NORTH DAKOTA

More Than 5,000,000 Acres Treated in North Dakota and Saving of \$1,000,000 Accomplished—Many Counties Organized.

Crops worth more than \$150,000,000 are destroyed every year by such rodents as prairie dogs, ground squirrels, pocket gophers, rabbits, field mice and rats and woodchucks. This heavy toll does not include loss inflicted by house mice and rats. That the losses due to rodents constitute an entirely unnecessary drain upon the productive capacity of the farms and that they may be permanently eliminated at a cost which is but a small fraction of the damage occasioned during a single year has been proved by the extensive work already accomplished in campaigns conducted by the Biological Survey of the United States department of agriculture in co-operation with state and county organizations.

Community co-operation will do the work. Rodent pests have been practically eliminated from millions of acres of valuable agricultural land in the last four years through the co-operation of thousands of farmers. Describing these campaigns federal specialists declare that the eagerness with which farmers have availed themselves of the opportunity to join in concerted movements aimed at relief from these pests, is most significant and gratifying, while the returns in increased crop yields from the amount of labor and money invested in the community campaigns have exceeded all expectations. A successful fight against rodent pests requires that all local, state and national agencies concerned be brought into harmonious and effective co-operation and that modern poisoning methods of proved efficiency be used.

Work in North Dakota. In the great grain-producing areas of North Dakota there has been developed the most extensive and thoroughly organized campaign with a comprehensive plan of state-wide eradication of rodent pests that has yet been attempted. This campaign was organized under a co-operative project agreement between the bureau of biological survey and the states relation service of the United States department of agriculture and the North Dakota agricultural experiment station and extension service, including the county agent organization. The state legislature provided a revolving fund available for use in procuring and maintaining the required stock of poison supplies.

Many Gophers Killed. The initial campaign was launched against the Richardson ground squirrel, commonly known locally as "gopher." In many places poisoning resulted in the killing of 98 per cent of the animals on the first application. Entire counties were organized in a systematic voluntary warfare upon the rodents, using the township as a convenient working unit. Poisoned grain

was prepared in quantity, placed in plainly marked containers and distributed to farmers, who then applied it according to directions around the ground-squirrel burrows on their farms. More than 5,000,000 acres were treated with poison in 1916. During the spring of 1917 16,000 farmers in North Dakota joined in this movement. The ground squirrels were poisoned on 4,500,000 acres, resulting in a practical elimination of the pest in the areas treated and a saving in the year's crop of more than \$1,000,000. Including hire of labor to distribute the poison, the cost averages less than 5 cents per acre under North Dakota conditions, and where landowners perform the labor the actual cash outlay per acre is materially reduced.

Co-operative Campaigns. In other states co-operative campaigns have been effective against other pests, such as prairie dogs and jack rabbits. As suggested by the campaigns which have already been conducted effectively, these five important features essential to ultimate success are named by specialists of the department of agriculture: (1) Co-operation of all agencies involved, including farmers, local organizations, county, state, and federal officials; (2) leadership trained and experienced in methods of rodent control and in organization; (3) a unit plan to systematize activities and cover a sufficiently large territory to prevent reinfestation; (4) financial support to procure supplies in large quantities; and (5) legal provision for the extermination of pests upon neglected areas.

Don't Be Afraid of Your Meals

Take "Eatonic" and Laugh At Stomach Troubles

H. L. Kramer, the man who originated Cascarets, has discovered a sure, safe, quick-acting relief for bad stomachs. He named it EATONIC for your stomach's sake.

You can eat anything you like now and digest it in comfort, for stomach ease is positively assured if you eat an EATONIC tablet regularly after every meal.

EATONIC acts directly with the food the moment it enters the stomach. It immediately checks any tendency toward too much acid and enables the food to pass from the stomach into the bowel in a sweetened condition, and thus prevents the formation of sour distressing gases that upset digestion and cause a bloated, dull, lumpy feeling that makes your FOOD REPEAT. EATONIC enables you to eat your fill and laugh at indigestion, dyspepsia, heartburn, "sour stomach" and all the other bugaboos of "the math-afraid-of-his-stomach."

Kramer says: "EATONIC should be in every home ready for use after every meal. An EATONIC tablet will aid you naturally to easily digest and assimilate—your food can be thoroughly enjoyed without the slightest danger of misery from acid stomach. I strongly advise every one to take EATONIC after meals. To correct bad stomachs and keep them in perfect condition, it is a most wonderful discovery."

If EATONIC fails to give you prompt stomach relief, your money will be refunded; 50c buys a large box at any drug store. Or write to Eatonic Remedy Co., 1018 S. Wabash Ave., Chicago, U. S. A.

Spring Run of Distemper

MAY BE WHOLLY AVOIDED BY USING "SPOHNS" A small outlay of money brings very great results. It is a sure cure and a preventive if you use it as per directions. Simple, safe and sure. The \$1 size is twice the quantity and an ounce more than the 50c size. Get your horses in best condition for late spring and summer. All druggists, harness dealers or manufacturers.
