The mother and son were taking a morning dip in the tank and everything seemed peaceful when suddenly there was a roar from Miss Murphy. Keeper Bill Snyder ran over to the cage and saw that Caliph had seized Miss Murphy by the lower jaw and would not let go. The mother was gentle at first, but she finally gave her head a shake that made the bars rattle, and Master Caliph released his

When a fine diameter is required there must be repeated annealings and drawings. This may be done until the bar, which originally was four inches square and four feet long, becomes reduced to a diameter of a single thousandth of an inch and extended 13,000 miles in length. Before so fine a size is reached the wire will cut into the steel of the die plate, so the usual die plates must be discarded and the draw ing continued through holes drilled in diamonds, the diameter of these diamond dies decreasing by fractional parts of a thousandth of an inch. This wire affords a striking illustration of a material made more valuable by the application of labor.

From the time the har of metal enters the furnace nothing is added to it. All the work is done with one article, which is passed through rolls and drawn through die plates until it is finished.-Chicago Tribune.

GRATITUDE OF THIEVES.

Their Longing For Association With Honest Men.

The thief in the community is very much like the boy whose meanness or ruffianism has caused the other little children to band together to ostracize him. He may move about with a sulget back in the circle out of which he has been ruled.

If any honest man wants to meet lively gratitude let him knowingly give the countenance of his company to a crook. It will be a favor never forgotten. Every lawyer practicing at the criminal bar knows this. One very well known practitioner of genial personality and large tolerance occasionally takes a client to dinner at a good restaurant or braves an appearance with him at a theater. There have been embarrassing results, due to the criminal's gratitude.
