> THE MARRIAGE OF NEAR KIN. Nothing Apparently to Justify the Common Prejudice Against It.

From the Scientific American There is a widespread idea that consanruineous unions produce either defective offsprings or none at all. When a marriage between cousins is spoken of, sterility or a deaf mute, idiotic or deformed progeny is predicted, and examples are always at hand to cite in support of the prophecy. Does this opinion rest upon positive and well-authenticated facts, or is it erroneous? This is a question that was examined a few years ago by G. H. Darwin, who, after a profound study of the subject, came to the conclusion that, in the present state of science, there is nothing to justify the common prejudice that exists against the marriage of near kin. More recently the subject has been further examined by Mr. A. H. Huth, who has just published an exhaustive work, upon it, in which he arrives at the same conclusions that Mr. Darwin did, Mr. Huth thinks that consanguintly of itself, plays no particular role in the union of individuals of the same stock. In the descendants, it increases the tendencies common to the two progenitors. By reason of their relationship, the closer this is and the closer the relationship of the ancestors, the deaf mute, idiotic or deformed progeny is progenitors. By reason of their, relation ship, the closer this is and the closer the re

ship, the closer this is and the closer the relationship of the ancestors, the
greater is the tendency of the descendants to exhibit the same
dispositions. If these are good, consangain-sous unions will be advantageous, in
that they will fortify and intensify them.
If, on the contrary, they are bad, such
unions should be avoided, is order to prevent a reinforcement of unfavorable tendencies, which should be suppressed. But the
one is identical where it is a question of unare is identical where it is a question of un-elated persons. No reasonable persor-rould urge two neuropathic individuals of ifferent families to unite, because he know-hat the neurosis has every chance to ecome intense in the descendants. On the equally healthy and well favor-be encouraged.

But, this admitted and explained, cony reason of the existing laws upon mar-lage, is the degree of consanguinity be ween individuals capable of uniting legi-

as unfortunately, the unfavorable tenden-cies are more easily and frequently trans-mitted, because they are the ones that are established with the most facility, there is oftener more reason for avoiding than seek-ing such unions. Upon the whole, Mr. Huth concludes that the accusations di-rected against marriages of near kin are not justified in the present state of science,
