WILLING TO CALL IT A DAY

But Any Mother Will Tell Daddy He
 Had a Comparatively Easy
 Twelve Hours.

A Spartanburg man's wife had influenza and he stayed at home one day to help with the housework and the care of the children. That night, after the children had been put to bed, he undertook to make a record of his day's work, and this was the result:

Opened door for children, 108 times; closed it after them, 108 times; tied children's shoes, 16 times; number of stories read to them, 21; stopped children playing piano, 19 times; smoke rings blown to amuse them, 498; arbitrated children's quarrel, 77 times; put doll carriage out, 28 times; brought doll carriage in, 28 times; mended kiddie car, 5 times; cautioned children about crossing street, 66 times; children crossed street, 66 times; peddlers rang door bell, 7 times; toy balloons bought for children, 6 times; average life of balloon, 3 minutes; dried children's tears, 14 times, assisted children to blow noses, 14 times; telephone calls answered, 8; percentage of wrong phone numbers, 100 per cent; crackers issued to children, 37; slices of bread and butter served, 12; drinks of water served, 9; refused to buy candy, 87 times; questions about Santa Claus dodged, 1,501.

The gentleman is now advertising for two nurses and governess.—Exchange.

SILVER MODELING MADE EASY

Recent Discovery Will Be a Boon to
 Sculptors and Workers in
 the Metal.

A preparation of silver which may be made in a plastic form like wax or clay, and also thinned down to the consistency of paint has been discovered by a member of the staff of a large American research laboratory. Copper, copper alloys and bronzes may be worked in the same manner. By simple technology, the preparation may be reduced to the pure metal shape. A sculptor may work it in without any change in its form or the round or in relief,

just as he does his usual materials, or in dilution it may be applied to a metallic surface with a brush. It greatly simplifies the problem for artistic work of a high order, although, of course, it is more expensive than stamped ware. Medallions and figures may thus be presented in the original without the need of casting, and such articles as silver sets may be made of which every member is original and unique. It provides a new medium for artists. The invention is patented and ready for introduction.

SUGAR-GROWING IN IRELAND.

In 1790 sugar growing was established in Ireland, the Irish climate being remarkably adapted for the growth of bulbous roots of a superior quality, whether for the manufacture of sugar or for feeding purposes. In those days the people of the Irish nation were the greatest sugar consumers in the world. With the present great scarcity of sugar in the United States and other parts of the universe Ireland is seizing the opportunity for the re-establishment of the industry and for making the Irish nation once again the greatest sugar-growing country.

Consider Probable End.

Better it is, toward the right conduct of life, to consider what will be the end of a thing, than what is the beginning of it; for what promises fair at first may prove ill, and what seems at first a disadvantage may prove very advantageous.—Wells.

Jewish Sabbath.

The Jewish Sabbath starts at sunset on Friday, because the Jews, like the ancient Greeks, began their day at sunset and not at sunrise, or immediately after midnight, as we do, who follow the ancient Romans.

"Good Stickers."

There are some practical "make-shifts" for muckage. The white of an egg will be found quite as good for sealing letters. Another substitute is a cold boiled potato rubbed over the paper.

His View.

A somewhat cynical acquaintance tells us that the secret of happiness is not to let your troubles bother you any more than they bother your friends.—Boston Transcript.

OPPORTUNITY FOR SELLING FARM PRODUCTS DIRECT TO CONSUMER.

The Automobile Brings City Customers to the Door.

There are approximately 7,500,000 automobiles in the United States and there are almost that many farmers.

In this year, when the most expensive crop ever raised by the American farmer seems likely to pile up on his hands for lack of a profitable market, a way is suggested to reduce surplus by attracting automobile trade direct to the farms.

Most city automobile owners drive into the country once a week or more, and every farm located on an automobile road has dozens or hundreds of possible customers for its fruits, vegetables, poultry and eggs passing its gate every day. The war made the market basket poplar, and the ordinary automobile owner who keeps house would be perfectly willing to take home a bushel or more of produce if by so doing he could lessen his living expenses.

Stands Along Many Roadways.

Roadside stands for the sale of fruits and vegetables are seen along many highways and frequently have proved profitable. But observation shows that they have not been developed to the full measure of success. One of the principal difficulties is that the autoist does not see the stand until he is abreast of it, after which he must make up his mind and check his machine. Then, in nine cases out of ten, he concludes that there will be another stand further along and that it is not worth while to turn around and go back. One farmer in Pennsylvania solved this difficulty by placing a series of signs along the entire half-mile front of his farm. These greeted the motorist.

- "Fresh Fruit One-Fourth Mile."
- "Sweet Cider 60 Rods."
- "Fresh Comb Honey 50 Rods."
- "Fresh Vegetables 40 Rods."
- "Fresh Eggs 20 Rods."

The motorist's eye thus was attracted and he had time to make up his mind, and in a large number of instances stopped and made a purchase. The signs were inexpensive and yielded a large profit.

There are many motorists who trav-

el over the same route time after time. The farmer learns to recognize them. Children especially nowadays learn to know makes of automobiles at sight and can pick out those which frequently pass. One effective way of catching the motor trade is to note the license numbers, look them up at the city hall or police station on some trip to town, and then drop them postal cards calling attention to the advantage of carrying home a bushel of this and that product on their next trip. This form of appeal is more effective if the farm has a distinctive name, as a constantly increasing number of farms have. One thing essential to building up even a transient trade in farm products is that the prices shall be reasonable, preferably a shade below city market prices, and that the goods shall be of honest quality. Too much emphasis cannot be placed on the latter feature. There is, of course, a temptation to reason that the same customer will not come back again, but this is likely not to be so, and even if it is, there is a broad freemasonry among motorists, and the word quickly spreads that one of the number has been cheated, whether it be by a garage, repair man, hotel or dealer, city or country.

Fair Dealing Pays Best.

The farmer has to market his produce somewhere. If he takes it to the city, it will be carefully inspected for quality and the price will be regulated by supply and demand. If he will place his product in such position as to attract and arrest the passing motorist and then make the price and quality such that the motorist wants to come that way again or tells his friends to stop, he is on his way to a business that may be made season long and highly profitable. If the farmer keeps on hand a supply of suitable bags or packages in which to handle his products, it will mean many a sale which otherwise would be lost because the autoist would often not be prepared to handle the things he would like to buy. This idea is capable of adaptations that will suggest themselves.

OYSIER RAISING IN HOLLAND

Highly Scientific Methods Employed in That Country Have Been Remarkably Successful.

In the industry represented by oyster cultivation, Holland is the most systematic in its operations and employs more elaborate methods than any other country in the world. The numerous sounds that indent the coast of Holland, particularly in the region of the River Scheldt, afford excellent facilities for the propagation of the oyster and enable the country to conduct the most successful oyster industry in Europe. Public dredging is not permitted, as the result of that system was the threatened exhaustion of the fisheries, and the beds have been carefully surveyed and specific tracts are leased to individuals and companies, who are thus enabled to conduct the propagation of the oyster in a systematic manner that insures the best results from the territory available. Many growers lease several tracts in different localities, and adapted to different purposes, which facilitates the various operations, as the oysters can be shifted from one place to another, according to the season and the stage of development. A few of the oystermen plant shells on the banks, as is done in many places in this country, but the largest and most successful propagators are equipped with their own tanks and ponds, located in convenient shallow bays, in which they carry on the culture.

MEASURE HEAT OF STARS

Scientific Instrument Used at Washington Is Sensitive to an Almost Miraculous Degree.

One of the experts employed by the government bureau of standards in Washington has perfected an instrument which measures the heat of a star so far away that it can't be seen with the unaided eye. This same instrument is sensitive enough to be affected by the heat of a candle 100 miles away. "What is the practical value of such labor?" asks Thomas H. Uzzell in Everybody's. "Well, for one thing, these experiments by Doc-

tor Coblentz have made a substantial contribution to the theory and technology of measuring high temperatures which will melt any known substance. Making use of this new knowledge, other bureau men have greatly improved the high-temperature thermometers which are used in the steel industry to measure the temperature of molten steel. One of the biggest improvements in the production of steel in recent years is the result.

"Formerly many millions of dollars' worth of steel products depended upon the trained eye of the foreman in estimating the temperature of steel from its color. But these new thermometers don't drink; they don't fall; and their accuracy means vast savings in money, better steel, a decided step forward in America's industrial sovereignty."

On Toads.

"Many stories are extant tending to show that toads have been found alive in rocks or in soil deep in the earth; yet so far as investigated by the writer in no case has the evidence been at all conclusive," says A. H. Kirkland in an article on "The Garden Toad" in Boys' Life. "On the other hand, experiments have shown that toads may be kept alive at least 18 months sealed up in plaster or limestone. There is little doubt that the toad may live to be 20 years old, or more.

"Though it lives alone in summer, toads often hibernate in colonies of half a dozen or more. In feeding, usually by night, the toad patrols a fairly well-defined beat; garden and flower beds are frequented, and particularly the ground under arc lights, where numerous insects fall fluttering from the lamps above. When food is abundant, as shown by experiments on toads in cages, the animal eats an equivalent of four square meals daily, consisting of caterpillars, cut-worms, beetles, ants, etc."

First Clocks Simple Affairs.

The first clocks were simple affairs which showed the hour alone; then followed the addition of the minute hand, and later came clocks which recorded the day of the month, the phases of the moon, and many other pieces of information, generally of a

more or less astronomical character. During the sixteenth century, the Italian and German clockmakers, notably those of Nuremberg and Augsburg, made great progress in their art. There are those who claim that one Richard Harris, an Englishman, invented and set up the earliest pendulum clock some time during the first four decades of the seventeenth century; but this story does not appear to be well authenticated, and the honor of introducing the pendulum seems to belong to the Dutchman, Huygens.

Men of Probity.

Good literature proceeds from men of natural probity, and since one ought rather to praise the inception than the result, you should give greater praise to a man of probity unskilled in letters than one skilled in letters but devoid of probity.—Leonardo da Vinci (translated by Edward McCurdy).

Spirit Meant for All.

That spirit which suffices quiet hearts, which seems to come forth to such from every dry knoll of sere grass, from every pine stump, and half-imbudded stone on which the dull March sun shines, comes forth to the poor and hungry, and to such as are of simple taste.—Emerson.

Chamberlain's Tablets Are Just What You Need.

When bilious
 When constipated
 When you have no appetite
 When your digestion is impaired
 When your liver is torpid
 When you feel dull and stupid after eating
 When you have headache
 They will improve your appetite, cleanse and invigorate your stomach, regulate your bowels and make you feel "fine as a fiddle." They are easy to take and agreeable in effect.

SEED TIME

Is Still Here

Alfalfa, alsyke, red clover, white clover, Kentucky blue grass, orchard grass, brome grass, timothy and Soudan grass. All kinds of garden seeds, home-grown seed corn, garden seeders and cultivators, hand corn planters, the No. 140 P. & O. corn planters.

This is a good time to begin the saving of fuel by using a

Quick Meal Oil Stove

For cooking, instead of using wood or coal in the range. The saving and comfort to the operators will be a surprise to you.

Lawn mowers, grass scyths, everything for your spring requirements.

Fish and Game Licenses for 1921
