

# "What Am I Worth"

Put that question to yourself. Most men are worth only what they earn. If they don't work or can't work, their money value drops to zero.

If you are in that class, put every ounce of your strength and ambition to the task of getting out of it. A safe and sure way to do it is to take part of your earnings regularly and build up capital in a savings account at the

### BOYS' AND GIRLS' CLUBS

Objects and Methods of Movement to Make Rural Life Fuller.

The primary object of the boys' and girls' clubs, which are being organized throughout the country with the assistance of the department but in co-operation with the state colleges of agriculture, is to aid young people to become more efficient and more contented farmers and home builders. By cultivating in boys and girls habits of industry and thrift, the possibilities of farm life are revealed not only to them but to their elders. The best methods of handling farm products and preventing waste are demonstrated, the spirit of co-operation in family and community is developed, and the dignity of the farmers' vocation enhanced by presenting it as a skilled occupation, capable of returning adequate reward to the competent. Finally, the school life and the home life of the boys and girls are brought into closer relationship and the rural school teacher aided in the task of making agricultural instruction a vital thing.

The clubs may be organized under the leadership of the county superintendent of schools or any of the teachers under him. If the educational authorities of the county are not yet alive to the possibilities of these clubs the county demonstration agent may take charge of the movement, or if there is no demonstration agent in the county such organizations as local chambers of commerce, the Grange, women's clubs, etc., may assume the leadership. The names and addresses of the boys included in the clubs are collected and sent to the state agent, who will furnish organization and cultural instructions upon request.

Experience has shown, however, that the difficulty is not in organizing a club with a large enrollment of members, but in inducing these members to complete their work and to report on the results. The test of efficiency is not so much the organization of new clubs as continuing interest in those already formed. The leader's duty therefore is to keep in touch with the members of the club, encourage those who need encouragement, and to see that once a project has been started it is carried on to completion.

To assure this continuity of interest various schemes have been evolved to make the club work progressive. Thus in the case of the boys' clubs a number of rotation systems have been devised. In the south, for example, there is a two-year rotation, in which corn is followed by a winter cover crop of oats or rye with clover or vetch to be turned under. The second year cowpeas or soy beans or peanuts are grown, followed by a winter cover crop which is turned under and followed by corn the third year. In Alabama and Georgia there is a three-year rotation which consists of seed cotton, corn and oats, or cowpeas. In the North, corn is followed by forage crops, alfalfa, and clover, and a club project in poultry, pigs or baby beef is added.

Such systems as these, however, are not practicable in every locality, and state agents sometimes have to resort to unusual methods to interest the youngsters in useful work. The state club agent in Washington, for example was confronted with a rather difficult problem in the vicinity of Bellingham, north of Puget Sound. Much of that country is owned by the federal government and by large landholders, and is mostly covered with large forests. Here the problem of giving the boys interesting and educational work was solved by means of the angora goat. The large estate owners are pleased to have goats forage in the forests as they clean out the undergrowth and the state agent contends that this kind of club is the best for that part of the country.

Another example of agents adapting their plans to circumstances is the canning of Salmon in Washington and Oregon, mainly along the Columbia river. There thousands of tons of salmon have gone to waste annually. At present 25 clubs of about 20 members each are canning salmon, turning what has heretofore been wasted into a well-preserved article of food.

In the girls' clubs new members grow tomatoes only. During the second year they divide their gardens in half and grow tomatoes and a few other crops. The third year they have more crops. Some of the combinations are tomatoes, beans and beets; and tomatoes, peppers and okra. After these have been mastered, the girls begin to fill their gardens with perennial vegetables and fruits. In this way by the time a club girl is ready for the high school or college she will have started a permanent garden or orchard.

The effect of this club work is by no means confined to the members themselves. Many of the county agents have found that it is the best possible introduction to the home of the members' parents. In practically every club it has been noticed that some of the parents and neighbors of the members invariably adopt the methods of the boys in their various projects. The yields and profits that the boys obtain are the best possible demonstration of the value of their methods. It has been said, for example, that a single corn-club boy in one community did more for sound corn culture in his country than five years of public lecturing could have accomplished.

In the same way the success of the girls with their canned products has paved the way for women county agents to demonstrate simple useful lessons in cooking to the mothers. It is an easy matter for an agent who has gained in this way the confidence of the farm family to secure the introduction of a number of simple but important improvements in household management.

The new movement of organizing mother-daughter home canning clubs in the North and West is an instance of this, for it is an outgrowth and extension of the work already done by the girls' canning clubs. The club project is confined entirely to the canning of fruits and vegetables, and these may be grown by the club members—the mother-daughter team—or by some one else and purchased for canning purposes. It is designed primarily to teach better methods of home canning and to aid in the utilization of waste products of the farm, orchard and garden. Among the other

aims of the clubs are to cultivate closer co-operation between mother and daughter in home interests and activities, to teach economy and thrift, and to furnish helpful ideas for the direction of girls' work in co-operation with mothers, in the home during their vacation periods.

### MYSTERIOUS GIRL RIDER

Best Performer With Sells-Floto Circus Unknown.

"I'd like to join your circus." She was young and childish appearing and she stood smiling shyly into the face of Fred B. Hutchinson, the general manager of the Sells-Floto Circus, in Buffalo Bill's Original Wild West, in Denver last winter. The manager, busy with his contracts, looked up.

"That so," he asked. "What circus have you been with?"

"None."

"Oh. Well, what can you do?"

"Ride."

"Got any pictures?" The general manager had lost a great deal of interest at the confession of inexperience. Many and many such applications come to offices of a circus. But the girl before him was insistent.

"I haven't any pictures," she answered, "but if you'll take me to the ring barns, I'll show you what I know about riding. I think—" and she smiled a knowing little smile—"I can just about out-ride any equestrienne in America."

The general manager opened his eyes. He rose from his desk and fifteen minutes later, ordered a hostler from the ring barns with one of the ring horses. The girl slipped a pair of "bareback" shoes from a pocket and rode them. Two minutes later the general manager of the Sells-Floto-Buffalo Bill circus gasped and reached somewhat aimlessly for something to lean against. The shy little girl had performed the turning of a "flip-flop" on horseback. But that was just the beginning. She leaped from the horse's back to the ground. She leaped back again. She stood on her hands as the horse galloped. She balanced as lightly as the breeze itself, she did every trick known to equestrianism—and then some more she had invented herself. That night a young girl, the general manager and the owner of the Sells-Floto-Buffalo Bill circus had a long conference and a contract passed between them. And as a result of it all, when the Sells-Floto-Buffalo Bill circus comes here Monday, June 14th, it will bring as one of its chief features Rosa Rosalind the "Maid of Mystery."

For the circus has learned just one thing about her since that day of the meeting last winter, and that one thing is that she can out-ride anyone else in the business. Where she comes from, what her real name is, how she learned to ride and why she never before appeared in public—all these things are unknown to the circus. The rider has simply announced that she desires to be known as Rosa Rosalind and that's all the circus can learn. But one thing it is sure of—that she is the best equestrienne it ever discovered.

Miss Rosalind is to appear in both the performances of the show when it comes here. And of course her performance is included in that which can be seen for the general admission price of twenty-five cents.

### ADVERTISED LIST.

List of letters remaining unclaimed in the Twin Falls postoffice for the week ending June 8, 1915. Parties calling for these letters will please say "advertised June 8, 1915."

A gate does not seem important enough to make much fuss about.

Still—if you had overheard the remark as we did, "By golly, that's a good gate—that farmer's up to scratch—bet he has a good farm"—then you would probably look around and see in what shape your own gates were.

Little things like that certainly do a lot toward making a place look shabby or up-to-date.

The lumber does not cost much—and ours is the right kind—makes a good substantial job.
