HOVSEHOLD HINTS J. 11:89 11

Froh Air in the Sick Room. A clever idea for changing and fresh-ening the air in a sick room and at the same time affording a mild spectac-ular entertainment for a patient un-able to more is the following: Put a teaspoonful of the whole coffee berries in a saucer and set where the invalid can see it. Fill it up with toilet water-enu de cologne or perfumery—and set fire to it. If this is done when the room is dark the effect will be found especially pretty and the change of air most refreshing.

To Clean Tapestry.

To Clean Tapestry. Tapestry and cretonne may be cleaned and revived by this process: Cut up some scap into shreds, allowing four ounces of scap to each quart of water, and boil to a jelly. Have ready two tubs of pretty hot water. Add to this enough boiled scap to make a good lather. Add two handfuls of bran to prevent the colors running. Wash quickly with little rubbing, first in one, and then in the other tub, and then rinse out in either salt and water or vinegar and water. Shake well to get rid of the bran, and dry at once. Starch in a thin boiled starch, roll tightly in a clean cloth, mangle, and then iron with a moderately hot iron.

For My Lady's Boudoir.

For My Lady's Bondoir. For one's own room a pretty device is to take a yard of broad satin ribbon and prepare a handsome bow for each end. Take a number of photographs and paste a strip of strong paper to the back of each, leaving an unpasted space at the center through which the ribbon may pass. Run the ribbon band through the openings so that the row of photographs stand face outward mounted on the strip. Sew the bows to the end of the ribbon and tack the bows to the wall. A vertical row of photographs and only tacking the strips of paper across the backs of the photographs and only tacking the upper bow to the wall, or prefer-ably putting no bow at all below.

Though traffic in the Baltic-North see canal has not come up to expecta-tion, the Germans are pleased at the discovery that the herring is using the canal as a spawning ground.

A medical paper says that in rail-way collisions nearly all the passen-gers who are asleep escape the bad ef-fects of shaking and concussions, na-ture's own anaesthetic preserving them.

A New Orleans man is said to have invented a sugarcane planter, in the form of a wagon, that with three men and four nucles will do the work here-tofore done by nine men and nine mules. tofore mules.

mules. A novel theory of cancer is being worked upon by Dr. Lambert Lack of London, who contends that the disease is not due to germs, but to specific in-jury of the mucous membranes and allied structures.

A wild coffee of the island of Re-union, in the Indian ocean, is stated to be free from caffeln but to have much of the odor and stimulating ef-fect of ordinary coffee. It is suggest-ed that, improved by cultivation, this coffee should be made a valuable prod-uct in Cuba and the Philippines.

The old theory that the apparent enlargement of sun and moon near the horizon is due to comparison with terrestrial objects has long been un-satisfactory. It is now explained as a result of some peculiarity of the eye, which accounts also for the late de-termination that the shape of the sky is a horizontally widened convexity, with a singular depression in the zenith.

zenith. A fertilizer company has been organ-ized in the state of Washington which proposes to utilize the waste and offal of the salmon enneries. This refuse has been allowed to go to waste for years past. The new company finds in this a means for the creation of by-products, which will be of consider-atible value, as a fair sort of oil can be produced and the fertilizer is well adapted to many soils in the far west. A Frenchman has constructed a tri-cycle for traveling on the water. The wheels have immense rubber tires, nearly four feet in diameter, which, when inflated, buoy the machine up so that, when the rider is in position, the bottom of the wheels dip hardly more than a foot beneath the surface. Projections on the sides of the rear tires serve as paddles to propel the ma-chine. As it weighs less than 70 pounds, it can, when necessary, be ridden on land. ADVANCE IN FOOD PRESERVATION.

ADVANCE IN FOOD PRESERVATION.

Great Strides from Sandried Fruits to Ar-tight Cases. In early times the only methods of saving perishable pabulum for any considerable length of time was by drying it in the sun or at a fire, or by smoking or salting it. The Indians "jerked" their venison; they dried the fiesh of the buffaloes, reduced it to powder, mixed it with meal and then baked it for keeping. The Peruvians gave us the word "jerked" (in this meaning) from their word "charqui" which signifes prepared dried meat. The buccaneers derived their name from a peculiar method of curing beef, which was termed "buchanning." There was a regular trade between the native coast tribes of America and those of the interior in desiccated oysters, clams and other shellish. Savages and barbarians of all coun-tries have had similar customs, and some still maintain them. The gener-al fashion in our rural regions of dry-ing apples, peaches, and other rhuits is familiar, as well as the smoking of bacon and hams, the pitckling of meats and the salting and smoking of fish. A method of preserving vegi-tables that has long been extensively used in America is by boiling them for a proper fine, and transferring them to cans or bottles, and sealing immediately. But method of sealing cooked provisions in alr-tight metallic cases, which is now so largely in vogue, is of comparatively recent invention, and has been brought into use during the present century. In 1810 Augustus de Heine took out a patent in Great Brit-in for preserving low in and other metal cases by simply exhaust-ing the its means of an air pump, but it was unsuccessful. It was fol-lowed by a number of other efforts by various persons, all of which were more or less failures until Werthen-ner's patents, which were three in number, from 1839 to 1841. By his plan, the provisions of whatever kind are put into metal cases and closely packed, and the interstices filled in with water or other appropriate liquid, such as gravy in the case of fiesh food. The lids are then soldered on very securely; two sm

Boldered up.—sen-contact. Her Explanation. "Mr. Biggsley seems to run things just about as he chooses," said the gossipy man. "Yes," answered Miss Cayenne, "once in a while you find a person so stupid that people will let him have his own way, rather than argue with him."—Washington Star.

Bakers in the Middle Ages.

their Daughters into Womanhood

Bakers in the Middle Ages. An article in an English technical journal gives some curious details in re-gard to bread and bakers in the Middle Ages. Bakers were subject to rigid laws and close government supervision. In London only farthing and half-penny loaves were allowed to be made. If the baker retailed his own house, be-ore it, or before the oven in which it was baked. He was obliged to dispose of it in the market on Tuesdays and Saturdays only, and sometimes on Sun-days. A baker of white bread was not allowed to make bread of unbolted flour, and bakers of the latter were not permitted to have a bolting sieve in their possession. They were not allowed to heat their own ovens with fern, stubble or straw or to bake at night. They were not allowed to take back bread from hucksters when once it had become cold. Hotels and keepers of lodging houses were not permitted to bake bread perivative of the tatter were. The prostession is their owns. The profits of bakers were strictly defined. The quality of bread made was in de-gree indicative of the rank of people who ate i. The finest and whitest was called "simmel bread" and was only con-sumed by the most luxurious persons occupying high rank and in affluent cir-cumstances. The wealthy middle class up do head to the alther were strictly defined. The quality of bread made was in de-gree indicative of the rank of people who ate i. The finest and whitest was called "simmel bread" and was only con-sumed by the most luxurious persons occupying high rank and in affluent cir-cumstances. The wealthy middle class up do head was the french "gateau". Poorer middle class up do head were made by the humbler classes and the immutes of monasteries. Thure wealthy middle class up of head were made by the humbler classes the loaves had a twisted form. Tourte was used by the humbler classes the loaves had a twisted form. Tourte was used by the humbler classes the loaves had a twisted form. Tourte was used by the humbler classes the loaves had a twisted form. Tourte was used

llow Mothers may Help

Every mother possesses information of vital value to her young daughter. That daughter is a precious legacy, and the responsibility for her future is largely in the hands of the mother. The mysterious change that develops the thought-less girl into the thoughtful woman should find the mother on the watch day and night. As she cares for the physical well-being of her daughter, so will the woman be, and her children also. The mysterious change that a should find the mother other watch day and night. As she cares for the physical well-being of her daughter, so will the woman be, and her children also. The the young girl's thoughts become sluggish, when she experiences headaches, dizziness, faintness, and exhibits an abnormal disposition to sleep, pains in the back and lower limbs, eyes dim, desire for solitude, and a dislike for the society of other girls, when she is a mystery to herself and friends, then the mother should go to her ail promptly. At such a time the greatest aid to nature is Lydia E. Pink-ham's Vegetable Compound. It prepares the young system for the coming change, and is the surest reliance in this hour of trial. The following letters from Miss Good are practical proof Mrs. Pinkham's efficient advice to young women. Miss Good asks Mrs. Pinkham for Help. "DEAR MRS. PINEHAM:--I have been very much bothered for some

"DEAR MRS. PINKHAM:--I have been very much bothered for some with my monthly periods being irregular. I will tell you all about and put myself in your care, for I have heard so much of you. Each th menstruation would become less and less, until it entirely stopped ix months, and now it has stopped again. I have become very ner-and of a very bad color. I am a young girl and have always had to work very hard. I would be very much pleased if you would tell me what to do."-Miss PEARL Goon, Cor. 20th Avenue and Yeslar Way, Seattle, Wash. month for six

The Happy Result. 30

The Happy Result. February 10th, 1900. "DEAM MRS. PINKHAM:--I cannot praise Lydla E. Flikham's Vegetable Compound enough. It is just simply wonderful the change your medicine has made in me. I feel like another person. My work is now a pleasure to me, while before using your medicine it was a burden. To-day I am a healthy and happy girl. I think if more women would use your Vegetable Compound there would be less suffering in the world. I cannot express the relief I have experienced by using Lydia E. Pink-ham's Vegetable Compound."-MISS PRAM. GOOD, Cor. 20th Avenue and Yeslar Way, Seattle, Wash.

REWARD Owing to the fact that some people have from time to time of the granuscence of the testimory deposited with the National State of the testimory which will be paid to any person who can show that testimonial is not genuine, or was published before obta writer's special permission. - LVDIA E. PINKIAM MEDICINA

matter how pleasant your surroundings, health, good health, is the foundation for en-joyment. Bowel trouble causes more aches and pains than all other diseases together, and when you get a good dose of bilious bile coursing through the blood life's a hell on earth. Millions you get a good dose of binous bine coursing through the blood life's a hell on earth. Millions of people are doctoring for chronic ailments that started with bad bowels, and they will never get better till the bowels are right. You know how it is—you neglect—get irregular—first suffer with a slight headache—bad taste in the mouth mornings, and general "all gone" feeling during the day—keep on going from bad to worse untill the suffering becomes awful, life loses its charms, and there is many a one that has been driven to suicidal relief. Educate your bowels with CASCARETS. Don't neglect the slightest irregularity. See that you have one natural, easy movement each day. CASCA-RETS tone the bowels—make them strong— and after you have used them once you will wonder why it is that you have ever been aking—
