### Public Health Nurse's Report

All of the town schools of Ward County, except Sawyer, have been inspected by the Red Cross Public Health Nurse during the past three months. As the report will show many interesting results of the Public Health work have been found. In some cases the number of corrections exceeds the number of defects found. The corrections mean the defects taken care of up to the present time.

The people of the towns and the surrounding territory of each town become as enthused as the children with the Health Game and are even so interested that they will come to the school and bring the children of preschool age with them for the nurse to inspect.

Parent meetings have been held in all the places and have been very well attended, even on a blizzard. In one town a meeting was held in the church basement, and the nurse was asked to speak, and a little tot in school enjoying the nurse's stories and talks on Health when she heard this, timidly approached the nurse and said "I am going to hear you preach tonight."

One little fellow went home from school and told his mother that the nurse came into his room and asked them why she came to the school and no one knew but him and he had to tell her. He did too, saying, "To fumigate us."

St. Joseph's Hospital Installs \$5,000 X-Ray Equipment

An International X-Ray machine and equipment, the very latest and best machine of its kind ever built, has just been installed at the St. Joseph's hospital in this city.

The total cost of the machine and equipment aggregates \$5,000. It is a valuable asset to the hospital as a modern X-Ray machine is used in so many different ways about an institution of that kind.

With the use of the fluoroscope the rays penetrate the body baring to sight the bones so plainly that the various phases of the bone structure

may be determined. This is of particular value in treating a patient for bone disease. It is common knowledge of the uses of the machine for setting broken bones and locating foreign objects in the body. The machine is valuable in determining disease of the lungs. If one of the lungs is diseased, the appearance is mighty different from the normal lung. The heart can be plainly seen beating and the movement of the diaphragm up

and down as one breathes is readily discernable.

A number of very interesting pictures have already been taken. The machine is in charge of a nurse who has received a special course in its operation. Gloves and aprons of rubber and lead are used to insure one against electrical shock.
