Scott & Borne, Bloomfield, N. J. 16-4

TO STOP HOG CHOLERA PUBLIC CAN HELP MUCH

Dr. J. M. Jacob, State Veterinarian, Tells of State-Wide Educational Campaign.

"To anyone interested in or identified with live stock sanitary control work, it is apparent that success in the control and eradication of transmissible diseases depends in a great measure on intelligent public co-operation. This is especially true with diseases that are wide-spread, and of which hog cholera furnishes a most excellent example," said Dr. M. Jacob, state veterinarian, when interviewed on this question.

"In those communities where we have been able to develop deep interest and intelligent appreciation of the true nature of hog cholera, most excellent progress is being made and the losses materially lessened. For the past year or more we have carried on an educational campaign, principally in the form of public meetings and demonstrations, carrying the work in to those sections where it appeared to be most needed. The results of these meetings were so apparent that we decided to strengthen our plan in such a way that it could be carried into all parts of the state as quickly as possible under the most advantageous conditions.

"To do this an agreement has recently been perfected between the United States Bureau of Animal Industry, the Division of Extension of the College of Agriculture, University of Tennessee, and the State Department of Agriculture, as the three co-operating forces to carry on a hog cholera educational campaign to be immediately directed from the office of the state veterinarian. By this arrangement, two veterinarians are devoting their entire time to hog cholera, namely: Dr. Robert Jay, who represents the United States Bureau of Animal Industry as a hog cholera specialist, and Dr. C. Dillon White, who became associated with the State Department of Agriculture during the past year as assistant in hog cholera control. It is our present purpose to carry this work into every county in the state during the next twelve months, and it will consist of lectures and demonstrations which, under proper conditions, will be supplemented with stereopticon views.

"In those counties having farm demonstration agents, working under the Division of Extension, all arrangements for the holding of educational hog cholera meetings will be made through them. Where there is no county agent, the meetings will be arranged through other active interested channels, such as progressive farmers, commercial bodies, banking institutions, merchants, etc. Every phase of hog cholera will be dwelt upon, but laying unusual stress on how to prevent, control and eradicate this disease on a given farm or community.

"We are exceedingly optimistic regarding the future of this work, which can be retarded only by lack of co-operation on the part of the various forces interested in the conservation and development of our live stock industry."

## GET READY TO KILL THE FLY

Observe the fly that has lived all winter in some crevice, either in the house or barn. There she hides, quite content and oblivious to the cold weather, until about the middle of March, when the first warm spring days tempt her out into the sunshine. In a few days she decides to multiply the fly family, and if a manure pile is not convenient she searches out the next best place in some filthy back yard or privy vault or garbage can. She is aware that after the maggots are hatched they must have filth to feed upon to make them thrive. She lays 120 eggs.

They hatch out 120 tiny, crawling creatures, known as maggots. They grow quite rapidly. It takes about ten days for them to develop into flies. They are fully matured at the age of fourteen days. Sixty of them lay 120 eggs each, just as their mother did, and by the first of September the sixth generation of Mrs. Fly has reached the enormous number of about 6,000,000,000,000 descendants.

Kill the wintered-over fly by starting in March.

## WHERE TO BUY LIVE STOCK

If you need a registered bull or boar this spring, you should drop a postal to the Division of Extension, Knoxville, for a copy of their breeders' directory. This directory gives the names and addresses of all breeders of pure bred live stock of all classes in the state. It will be helpful to anyone wanting to purchase. It is free for the asking. Address R. M. Murphy, Specialist in Live Stock, Division of Extension, Knoxville, Tenn.

## MRS. JOINER GAINS THIRTY-FIVE POUNDS

Engineer's Wife Says Her Health Was Completely Broken Down—Tanlac Made Her Well and Strong.

"I have just finished my third bottle of Tanlac and have gained thirty-five pounds," was the truly remarkable statement made by Mrs. Wilhelmina Joiner, wife of Richard Joiner, the well known engineer on the M. B. & S. railroad, residing at 115 Third street, Macon, Ga.

"Before I began taking the medicine my health was so broken and I was in such a badly run-down condition, I couldn't give sufficient nourishment to my young baby—in fact, I was completely broken down in every way. I suffered from nervous indigestion and have been in a general run-down condition. In fact, for nearly two years I have suffered from nervous prostration brought on by this trouble.

"I tried doctors, I tried medicines, I tried nearly everything you could think of trying to get relief, but it just seemed like the harder I tried to get well, the worse I would get. Finally my condition got so I couldn't eat any solid food of any kind without suffering torture. It just looked like I was on the verge of a physical decline, and sometimes I was almost despaired of ever getting well and strong again.

"That's just the condition I was in when I began taking Tanlac, and it wasn't any time hardly after I began taking it before I began to improve. My nerves got better at once and I got so I could enjoy a good night's sleep. Then my appetite returned and it just looked like I couldn't get enough to eat. I could just eat anything put on the table, and everything seemed to taste good and nourish me. And the baby, why, you just ought to see it. It is just thriving and is getting plenty of nourishment. My complexion has cleared up, too, and I have a good color now for the first time in years. Before I began taking this Tanlac I was as yellow as a lemon.

"My husband thinks there is no medicine on earth like Tanlac, and my friends are all talking about how I have improved. I am only too glad to tell you what it has done for me, as it has been nothing short of a blessing in my case."

Tanlac is sold by Alexander Drug Co., Covington; Dr. McLister, Brighton; C. L. Taylor, Mason; Abernathy Drug Co., Munford; M. E. Tennant, Atoka; J. R. Bartlett & Son, Detroit; Ellis & Burkhardt, Tipton; Burlington Store Co., Burlington, and A. T. Lacey & Co., Richland, Tenn. adv.

## SUCCESS AND READING

Most persons look to the successful farmer with envy. But there is no reason for this. The successful farmer has been successful because of his close application to the details of a business which he has studied carefully. The advertisement for a farm paper in a recent issue of a printers' magazine expresses the idea in this way:

"Everybody looks up to and respects the successful farmer. He is one best asset in every community."

"The rest of the world may be made engaged in a feverish sort of foot-ball scrimmage for place or power, but the man with a lot of good land, paid for, a home upon it provided with modern creature comforts, a farm possessing suitable general equipment—including always good live stock—is America's most desirable citizen."

"He radiates thrift and the sunshine of better things all about him."

"Usually you will find that he is a reader of this magazine. Most men of this type will tell you that the paper has helped them forward."

Business farmers of a community will likewise tell you that they are using the columns of their local weekly paper to make their business what it ought to be. Successful men read. Successful men advertise.

## LIME AND HUMUS WORK TOGETHER MAKING SOIL

The organic matter in soils is constantly breaking down and humus is being formed. This decomposition, which is quite essential in a fertile soil, is promoted by an application of lime, which acts directly, as well as indirectly, by increasing the bacterial growth.

Humus is necessary for a productive soil. It is beneficial in each of the following ways:

It enlivens the soil.  
It makes a home for bacteria.  
It lets air and water into the soil.  
It retains the moisture.  
It keeps the soil loose and warm.  
It makes the soil productive.  
It prevents washing and baking.

## RESOLUTIONS ADOPTED BY TEACHERS' ASSOCIATION

The Tipton County Teachers' association held its regular meeting at the Byars-Hall high school Saturday morning. There was the usual routine work transacted and the following resolutions were unanimously adopted:

The teachers of Tipton county, appreciating the good work of L. E. Gwinn as county superintendent of public education during the past six years, do hereby offer the following resolutions:

First, That we appreciate the deep interest that he has taken in the teachers and their work and the co-operation that he has given in the organization and promotion of the County Teachers' association.

Second, That we feel that he has greatly benefitted our cause of education through his enthusiastic efforts toward raising the standard of efficiency in our county, by lengthening the school terms and increasing the salaries of teachers.

Third, We realize the great benefit that has come to the communities of the county through the passage of the school bond issue, which made possible both the repair of old and the erection of new school buildings which are ornaments of pride, not only to the respective neighborhoods, but to the entire county.

Resolved, That we appreciate the good work of L. E. Gwinn as county superintendent of public education during the past six years, do hereby offer the following resolutions:

J. H. BOYCE, Committee  
ELLA S. CUMMINS, on  
T. M. WOODSON, Resolutions.

## PLEASANT FAMILY REUNION

The family of Mr. and Mrs. J. C. Black, of near Gadsden, were all again together at the home of Mr. and Mrs. Robert Boals on Wednesday, December 27, 1916. This family of father, mother, two sons and five daughters remains yet unbroken by death.

The father, J. C. Black, is now seventy-two years old, in good health for a man of his age. The mother, Mrs. S. J. Black, is sixty-seven and in good health for a lady of her age. Mr. Black has been a successful farmer and feels proud of the seven children which they have raised to honor them in their old days by their excellent moral character and usefulness in the world.

The youngest daughter, Pearl, and a widowed daughter, Myrtle, are at home with their parents, living happy lives. The other three girls have married prosperous farmers and are living in a few miles of their parents. The oldest child, John W. Black, has been for sixteen years in Covington, Tenn., and has proved to be a successful business man, owning and managing a bakery and cafe. Jennings L. Black, the second child and youngest boy, has made his home at Vicksburg, Miss., for seventeen years and has made his record as a successful teacher in the public school work, now holding a state life-time teacher's license.

The two boys, John and Jennings, met in Memphis on December 26 and came home together where their aged parents and sisters were anxiously waiting to again embrace them as in times gone by. They spent a few days visiting friends and relatives in and near their old home and then returned to take up their business for the new year.—Crockett County Sentinel.

## THE CAUSE OF DREAMS

Psychologists have given considerable thought and study to the subject of dreams, but there are many questions concerning them and phenomena associated with them, the actual state of the unconscious mind and the relation between the mind and the body when we dream, etc., which have never been answered satisfactorily. It is impossible to say why we dream in all cases or to account for the nature of some of our dreams, as when we dream about things we never saw or thought of or experienced, things that never existed and that, to our waking minds, are utterly preposterous and foolish.

The cause of most of our dreams can be determined with a fair degree of certainty. For example, when we have a dream that frightens us—a nightmare—it is usually caused by distress and uneasiness in the stomach resulting from indigestion in eating. In many cases, it appears, dreams are caused by some sensory impression received by some center of the brain, such as that of hearing, touch, smell, etc.

Results of a number of interesting experiments dealing with the causes of dreams, conducted by Alfred Mapp, are recorded in a recent number of the Scientific Monthly, essentially as follows: In one test the experimenter caused himself to be tickled on the lips and inside the nostrils while he slept. This resulted in a dream that he was subjected to a terrible punishment, a mask of pitch being applied to his face, then roughly torn off, removing with it the skin of his lips, nose and face.

When a pair of tweezers was held near his ear and struck with a pair of scissors, the sound impression caused him to dream that he heard the ringing of bells. A bottle of perfume held near his nostrils caused him to dream that he was in a perfumer's shop. In another experiment, a burning match was held near his nostrils while a wind was blowing through the room. This caused him to dream that he was aboard a ship and the magazine had blown up.

When he was slightly pinched on the nape of the neck, he dreamed that a blister was applied and this recalled to his mind a physician who had treated him in childhood. A red hot iron held close enough to his body for a slight sensation of heat to be felt caused him to dream that robbers were in the house and that they were putting the feet of the inmates to the fire in order to make them disclose the hiding place of valuables.

The word "Lenore" was spoken and when he awoke he recollected it and found that he had attributed it to one of the persons who had conversed with him in his dream. When a drop of water was allowed to fall on his forehead he dreamed that he was in Italy, that he was very warm and was drinking wine. A light, surrounded with red paper and repeatedly placed before his eyes, caused a dream in which a tempest and lightning figured.

## ABOUT BEN ADHEM

About Ben Adhem (may his tribe increase)  
Awoke one night from a deep dream of peace,  
And saw within the moonlight in his room,

Making it rich, and like a lily in bloom,  
An angel, writing in a book of gold;  
Exceeding peace had made Ben Adhem bold,  
And to the presence in the room he said,

"What wastest thou?" The vision raised its head,  
And with a look made all of sweet accord,  
Answered, "The names of those who love the Lord."  
"And is mine one?" said About. "Nay, not so,"

Replied the angel. About spoke more low,  
And cheerfully still, and said, "I pray thee, then,  
Write me as one who loves his fellow men."

The angel wrote and vanished. The next night it came again, with a great awakening light,  
And showed the names whom love of God had blessed,  
And lo! Ben Adhem's name led all the rest.

—Francis Leigh Hunt.

## FOR SALE

Japan and pea hay, at my barn in Covington. See me in my office. Jan 18-2w J. R. HALL.

## DESERVED COMPLIMENT TO WELL KNOWN LOCAL FIRM

Somewhere in Tennessee, January 15, 1917.

Editors of Leader:—After reading your account of the banquet given to the members of the Supply Company, I wondered how many realized what a matter of pride that firm should be to Covingtonians.

It does not seem so many years ago since "Will" Shelton came "to town" to clerk for his kinsman, Mr. John W. Shelton. "Young Sam", before a great while, joined his brother, "Trude" and "Anthony" were small boys in school. Anyone who went to the old Baptist church, at that time, was apt to see Mr. Newt McFadden there accompanied by two sturdy sons, one of them named "Walter". If I remember correctly, these five young men organized the Supply Company, and I think most of them have been with it continuously since.

It is no unusual thing for young men to leave their native towns and do well in some strange place; and we often see new men come to a town and, taking advantage of opportunities overlooked by the home boy, build up a prosperous business. But I do not recall another instance where a few young men, without heavy financial backing, have, in their home town, undertaken and developed such a successful business as the Covington Supply Company, and I hope there are many who will join with me in wishing further prosperity to the "Firm Grown at Home."

Ex-COVINGTONIAN.

The last issue of the Covington Leader carried a statement of the financial report of the Covington Supply Company, Tipton county's largest mercantile establishment, known to every man, woman and child in that county. The statement was made by the treasurer that the company had sold a grand total of \$180,000 worth of dry goods, clothing, shoes, etc., during the year 1916. This firm is the largest advertiser in West Tennessee. It carries from half a page to a full page in each issue of both the Covington newspapers. If a firm doing a \$180,000 yearly business needs to advertise, what about those not so well known? If it pays this well-known, popular firm to advertise, what about the merchants of all the other towns?—Dresden Enterprise.

## HOMES WANTED FOR CHILDREN

The Tennessee Children's Home Society, located in Nashville, Tenn., has quite a number of boys and girls, ranging in age from seven years old down to little babies. These are fine little fellows, not hungry for food nor destitute for clothes, but are starving for parental love.

If you had no one in your home last Christmas who believed in a real Santa Claus, you missed lots of fun. Perhaps you are only thinking of the care and responsibility. Doubtless you have not thought of the joy and comfort one of these little ones would contribute to the happiness of your home. How about taking twins? We have two sets here and if you are willing to share your home with one of these little ones you may write to Mr. B. G. Regan, 213 8th Avenue, North, Nashville, Tenn.

By a simple rule the length of the day and night, any time of the year, may be ascertained by simply doubling the time of the sun's rising, which will give the length of the night, and doubling the time of setting will give the length of the day.

## EDITOR HOLBROOK SEES SNAKES AND THINGS

One day last week, Mr. Henry Myrick, near Latham, captured a two-headed snake on his place. The reptile is fifteen inches in length and has two well-developed heads—one on each end—being equipped for fighting both coming and going.

The reptile was placed in Dr. Taylor's laboratory and the doctor is feeding it condensed milk. He hopes to raise a big crop of 'em and place them on B. Stowe's big plantation—the biggest farm in that whole section and owned by the biggest-hearted citizen in all Weakley county.—Dresden Enterprise.

## LET'S CLEAN UP AND PAINT UP

It will soon be time to "clean up and paint up." And, while we are about it, let's clean up, paint up, and stay up. To spend a few hours and a few dollars on your yard and property this spring and then forget all about it for the next five years to come is the poorest kind of economy. It is even a first-class extravagance, for the moment a piece of property becomes "rusty" deterioration rapidly sets in and rushes right on to destruction. A few dollars and a little labor in periodical improvements is the best interest you can get on your investment. And what is good for you is equally good for the town, the county, and the state.—Brownsville States-Graphic.

## DO LIKEWISE

To The Commercial Appeal: Our county made over 11,000 bales of cotton in 1915 and only about 1,700 in 1916—quite a difference. But our railroad station here shipped 14 cars of mixed hogs and cattle and 47 cars of cattle alone and eight cars of hogs. There are two other shipping points in the county that did well also in the shipping of live stock.

Owing to the general diversification of the farmers and the various live stock interests our farmers are in good shape. The banks in the county show the largest deposits in their history. We sowed lots of wheat last fall and our people are ordering various breeds of fine cattle, hogs and poultry and we feel that in a couple of years we will be the leading county in the state in stock-raising and farm diversification. WM. SHELTON, Reporter.

Mr. Shelton's letter tells a story of such tremendous importance to every man, woman and child in the South that we print it verbatim and hope that all of our exchanges will reprint it.

Derma is in Calhoun county, Calhoun county is in Northeast Mississippi, midway between the old line of the Illinois Central and the Mobile &

Ohio railroad. It is a typical county, of that state, excluding the delta region.

In 1915 you will see that Calhoun county made 11,000 bales of cotton; last year the same county grew only 1,700 bales. The reduction came first from a tremendously wet season and assisted by the boll weevil.

But if one can not grow cotton successfully in Calhoun county one can do other things. See the result of what was accomplished last year. Fourteen cars of mixed hogs and cattle, 47 cars of cattle alone and eight cars of hogs alone are a good showing for any one station in the cattle and hog business in any county.

The farmers in Calhoun county are in good shape, says Mr. Shelton. The banks have the largest deposits in their history. The people of Calhoun county are living to live. They are determined to grow enough to eat, and they are determined to sell a surplus of eatable things.

The Commercial Appeal rejoices that Calhoun county is practicing the gospel of the diversification dispensation. The work of change from a single crop to a diversified crop system is necessarily slow and will always be accompanied by mistakes, but gradually the southern farmer will learn to handle cattle and hogs and grasses just as skillfully as he in the past has handled cotton and cow peas.

May we suggest at this time of the year also to all of our readers in this entire territory, no matter whether last year they grew one bale of cotton or 2,000 bales, that this year they will do mighty well if they plant some potatoes, corn and cow peas and the like? The price of food is tremendously high, but we can reduce the cost of living down here within three months from this 18th day of January. And if we put in an early garden we will then be within striking distance of a lot of stuff to eat on our own farms.

Germany fought the war during 1915 and 1916 on the potato crops. We can begin to cut this high cost of living in the South materially just as soon as early potatoes come in.

What is being done in Calhoun county ought to be done in every county in the state, regardless of whether the boll weevil is advancing, retreating or annihilated.—Memphis Commercial Appeal.

## What the Boll Weevil Did for Us

About a dozen years ago, The weevil came from Mexico. And when he'd crossed the Rio Grande A wave of terror spread the land, For cotton, then, was lord and king—Our meat and bread and everything.

And so, we started in to fight The pesky bug, with all our might; We set a price upon his head, And sprinkled poison where he fed. But still, we fought a losing fight, We could not check his appetite.

Our strength began to fail at last; It seemed that help and hope were past. Whenever you might turn your eye, Gaunt poverty was stalking by. Then some wise farmer up and said, "Let's try to raise some meat and bread."

And then the dawn began to break, King Cotton's hold began to shake; We planted corn, we planted wheat, And grew more hogs to make our meat.

And what is more, I'll say to you, We found that we could sell them, too. We grew a dozen calves or more, Where only one had grown before. And where no sheep at all had been, A dozen, grazed upon the green. And every mother's son of them, Was pedigreed from stern to stem.

Our silos dotted hill and plain; Our bins, they overflowed with grain; Our barns were filled with corn and hay; Our bank accounts had come to stay. And all because the weevil broke From off our necks King Cotton's yoke.

And still the pesky bug is here, But now we view him not with fear; We've learned to raise some cotton, too, In spite of all that he can do. And I must say, the ugly cuss, Has been no little help to us.—Whitney Montgomery, in Arkansas Homestead, Little Rock.

Pleurisy pains are located just below the short ribs. Lumbago affects the same region but toward the back. Ballard's Snow Liniment is the remedy in either case. If rubbed in thoroughly it eases pain, relaxes the muscles and the patient can move about freely and comfortably. Price 25c, 50c and \$1.00 per bottle. Sold by Alexander Drug Co. adv.

## NON-RESIDENT NOTICE

Howard Carey, et al., vs. Frank Womack, et al. In the County Court of Tipton County, Tennessee.

In this cause it appearing from the bill and amended bill, which is sworn to, that Bernard Womack, Beulah E. Womack and Agnes Womack, three of the defendants, are non-residents of the State of Tennessee and believed to be residents of the State of South Carolina, they are therefore hereby
