

# Successful Farming in New England

will be assured when modern methods of cultivating the soil are practiced and

# New England Animal Fertilizers are judiciously used. These fertilizers are based on the spe-

cial needs of New England soils and are composed of organic animal matter — Bone. Blood and Meat obtained from Rendering and Packing Houses.

The small farm properly fertilized is more profitable than a larger one with its soil fertility well-nigh exhausted. Prosperity and success in farming depend to a great extent upon the wise selection of the fertilizer to be used. New England Animal Fertilizers are the nearest to nature and supply the natural demands of the growing crops. Write us concerning any of your farm problems. Our information department is at your service at any time. Ask for our Crop Book.

Circular Conference of Congregational Church Held Yesterday.

The circular conference of the Congregational churches in the vicinity was held with Bethany church on Tuesday and was largely attended. The morning session was given over largely to an address by Rev. Frank J. Locke of Brookthe report lfrom the different churches in the conference, which gave very encouraging accounts. The dinner served in the parish house by the ladies of the Bethany church and the afternoon session opened at 1:30. The theme of this session was "The Value of Co-operation Among Christian Workers." The addresses were as follows: "Strength in Union," Rev. Robert Clark of Rau-dolph Center; "Unity, the Fundamental Principle of Christian Life," Principal G. L. Greene; "Christian Fellowship," E. W. Tewksbury; "Our Local Associa-tion," M. M. Wilson, both of Bethany church. This was counted one of the most successful of conferences in a long Dante's "Inferno" at the Opera House

Mrs. W. L. C. Potter of Providence R. L. is here this week, visiting he mother, Mrs. Williams, at the home of Mrs. Harry Chase.

Miss Desier Moulton left here Tuesday for Boston to pass several weeks with Miss Wiswell, who spends her summers here at the Wiswell cottage.

Judson Fitts, who has been to Gadslen, Alabama, returned on Tuesday. Mr. Fitts was summoned there as a witness labor of love. Two years were needed against E. C. Drew for fraudulent use of the mail in seeking to advance the interest of Fort Payne property.

The funeral of Frank Roppe was held on Tuesday afternoon at the home at 2 o'clock, Rev. Fraser Metzger officiating, and interment was in Southview ceme tery. The fire company and the employes from Salisbury Brothers' factory attended in a body and accompanied the remains to their last resting place. Among those from out of town, who were present at the funeral, were Mr. and Mrs. Charles Jerd and Mr. and Mrs. Howard Martin from Montpelier and Mr.

and Mrs. Charles Clough from Barre. The meeting of the Chistian brotherhood was largely attended at the parisa house on Monday evening, there being 95 present. The usual dinner was served which was composed largely of oysters this time, and was followed by an address by Clarke C. Fitts of Brattleboro, who spoke upon Vermont and chose for his subject, "Some things which are, and some which are not, the trouble with Vermont." The address was of a high order. It was followed by remarks by Judge Stow of Chelsea, Mr. Harvey of Montpelier and L. B. Johnson of this

# To Dye Goods at Home

Nowadays you can dye all kinds of fabrics with one dye, silk, woolen, cotfield, and his subject was "Abraham Lincoln." The address was interesting and enjoyed by all. This was followed by same dye, and the result, will be ensame dye, and the result will be en tirely satisfactory. You must simply be careful and get the right dye. It is 10c. Comes in 16 different colors, from which you can make lots of other combinations. It is really fun to dye goods Potatoes and Pork Hold to the Same with Dy-o-la at home.

### AMUSEMENT NOTES.

Thursday, February 22.

A new epoch in moving pictures has ne with the cinemtaographic reproduction of Dante's immortal "Inferno This creation, which comes to the opera house on Thursday, February 22, has made a triumphal tour through Europe, where it has been welcomed by the general public and students and scholars of Dante alike. The work occupied the best efforts of a noted band of Italian artists, to whom it was a

to complete the masterpiece, which has resulted from their efforts. Of the thirty-four cantos, which constitute the "In-The entire evening was very suc- ferno," the first and perhaps the most widely known part of the divine comedy thirty-three have been filmed. One of the most striking features of the production is the absolute loyalty of the film-makers in every detail both in letter and spirit to the genius of the great Tuscan poet. The production consists of five reels, arranged in proper sequence accord with the poet's original plan. The incidents of the first canto which no doubt are the most familiar to the averrge reader, have been reproduced with startling fidelity to the original, and form a fitting introduction to the whole performance. In rapid succession the pictures take us through the deepening and narrowing circles of the "Inferno. where, to use the language of the poet the guilty spirits are doomed to suffer in heat and ice.

# "Madame Sherry" Friday Night.

Because everyone all over the coun try is humming singing or whistling some number of the score of the big sensational musical success, "Madame Sherry," which will be at the opera house on Friday, Feb. 23, the impression is current in some quarters that the production's charm is in the greater part, musical. As a matter of fact, the mirth qualities of the play are no less engaging than its score. The love of a man for a maid under odd circumstances, love of the soulful, roman tic sort, love that blossoms in the heart of youth and flourishes as true love ever does, when things do not go smoothy, is the reigning spell of the production, according to report, but this love. this courtship, is so beset on so many sides, and attended by so many mis-adventures, that while itself remaining an appealing interest, all its necessary situations arouse amusement. Some idea of the fun developed may be gleamed by a summary of the characters of the play, which besides the lovers include an Italian house janitor, his Iris! wife, a lively fun-loving actress, a New York man-about-town, an excitable Venezuelar, an amusingly whimsical un-cle of the maid in love, and others, ineluding the pupils of a dancing school and the guests of a yachting party. Seats now on sale.

#### POULTRY REMEDIES. How to Treat Cholera, Inflammation of

the Crop and Mites and Lice,

Poultry raisers should remember that poultry, like human beings, are subject to many ills, especially when not propertly cared for, and the word cared fo covers a large zone, says the Philadelphia Record. It means, among other things, first, proper incubation (if incubators are road section, has been confined to the Four Vermont Men Fined \$50 and One used), proper brooding (if brooders are used), proper feeding and care of the growing stock, in properly-constructed poultry buildings, kept free from germs by proper cleaning and spraying. then a fowl will go wrong, such as apoplexy in hens over one year. This trouble is caused by a rupture of a bloodvessel in the brain. It is generally due to too high feeding, but may be caused by a sudden fright, violent exertion or straining when laying eggs. About the only remedy is to open the blood vein under the wing to relieve the pressure on the brain. The trouble may be prevented by correct feeding and make the fowls take plenty of exercise.

Cholera is often caused by unclean marters in the house and around the ards, and on farms where the fowls have range about the barnyard, especial ly where water is allowed to stand. It is a germ disease. It should be remembered that carbolic acid is death to nearly every form of germ life. Every disease that is caused by a germ can be successfully treated by giving earbolic acid. Three or four drops of the seid in the soft feed have been known to ar-

rest the development of cholera.

Inflammation of the crop is caused by irregular and improper feeding, the fowls eating too much at one time. The absence of grit, too much of one kind of The crop should be first emptied of its two grains subnitrate of bismuth and Saxon Salve is mild enough for a chil- one-half grain of bicarbonate of soda in

> Lice and mites are the worst pests the foundation for many of the ills that

poultry is subject to. The best time of the year to fight these insects is in the spring and early summer. Although, if they are troubling the flock now, do not delay, but get busy with the spray pump. The old nests and roosts should be re moved and burned to destroy all the stock that may hide out of reach of remedies. After this the walls should be washed with hot water and concentrated lye. As soon as they are thor oughly dry they can be sprayed with kerosene emulsion, coal tar disinfectant or crude carbolic acid solution. Late in the evening a pound of sulphur should be burned in each house and the walls and roosts covered with a thin whitewash. In two weeks sulphur should again be burned in the house, and the coosts painted with carbolic seid, being sure that every crack is filled. If this method is followed, a third application will rarely be necessary.

OHIO RIVER HAS GREAT DISCHARGE

Greater Than That of Upper Mississippi and Missouri Rivers Combined.

In volume of water, Ohio river is the main tributary of the Mississippi. Its mean discharge, according to the records of the United States geological survey, is about 300,000 cubic feet per second, which is much more than the discharge of St. Lawrence river at Ogdensburg, N. Y., although the drainage area of the St. Lawrence is nearly twice that of the Ohio. The maximum flow of the Ohio is approximately 1,500,000 cubic feet per second-about 30 times

the low water flow. A comparison of records of flow of Ohio river with those of the upper Mississippi and Missouri shows though its drainage area is but onethird that of the combined Mississippi and Missouri, its mean and low water flow is 1.3 times as great as their combined flow, and its maximum flow is 1.5 times as great . This fact is accounted for by the greater rainfall in the Ohio basin and by the general char-

acter of the region. The Ohio basin affords many opportunities for storage, especially on the southern tributaries. From topographic There was a special meeting of Crystal maps of the geological survey covering Spring Rebekah lodge, I. O. O. F., Mon-part of the drainage area of the Ohio a large number of reservoir sites have urdoubtedly show many suitable sites ber was initiated into the order and for dams that would impound large res-

> The magnitude of such a flow as that of the Ohio may perhaps be better appreciated if it is stated that a disond would in one day cover 595,000

### Phosphate Lands Withdraw from Entry.

During January, 214,749 acres of land in the state of Idaho believed to be underlain by phosphate rock were withdrawn on recommendation of the United States geological survey. This makes a total outstanding withdrawal in Idaho of 1.167,137 acres of phosphate land. In Wyoming 1,266,668 acres are now withdrawn, as phosphate land, in Utah 107,-745 acres, in Montana 33,950 acres, and in Florida 35,640 acres, a total of 2,611,140 acres. Partial detailed surveys of these All persons having watches, clocks or areas made by survey geologists show ewelry at my place, please call for them a very large quantity of this important within 30 days or forfeit same, for fertilizer, the value ranging up into the cost of repairing.
