Point Hope, Alaska, is in continuous darkness for a considerable portion of the year. It lies far within the Arctic circle and is our northernmost mission, influencing and Christianizing not only the immediate dwellers of the locality, but many other bands of Eskimos within a large radius. Bishop Rowe has arranged to light up Point Hope. It is to have an electric plant which is to be designed and built by Dr. Temple, of the engineering department of the university of Pennsylvania. Power will be obtained from windmills driven by the gales from Asia which blow almost continuously upon that bleak coast. Not only light but a certain amount of electric power will be furnished.

Little Profit in These Mines.

Some forty years ago considerable copper was mined and shipped out of San Fernando in the southern part of Lower California, but since then not much has been done with this metal. The principal difficulties in the way of the profitable mining of copper are fuel and transportation facilities. Iron deposits have been found at several places, the principal one being at San Isidro, but no active work has ever been done.

"I'm not at all likely to do it. The janitor has been through all the department stores in town, and he can't find a box big enough for the purpose."—Harper's Weekly.

Cat Mothered Chicken.

An Atkinson (Me.) man has a cat which distinguished herself, after losing a family of kittens, by curling up in the woodbox and mothering to the best of her ability a small chicken. That she had given it a thorough "washing," the condition of its feathers showed, as well as by the noise it made.

Danger of Knowing Too Much.

Let us remember, advises a medical magazine, that a brain crammed with a multitude of useless facts may show up brilliantly on an examination, but be so clogged as to be unable to put the knowledge to practical use. We know we are raising the pedagogue's ire by thus stating that there is such a thing as too much knowledge, but as a fact the world's work is being done by specialists who are densely ignorant of everything outside their respective narrow spheres—and of many things inside, too.
