EXPERIMENT STATION ON WHITEFLY CONTROL.

The Florida Agricultural Experiment Station Advocates Fungi For This Pest.

There is still time during September in which to introduce fungus. The earlier this is done the better. For introducing fungus use the method of spraying the spores (germs) of the fungus mixed in water against the under surfaces of the whitefly-infested leaves. Several trees treated with the red Aschersonia by this method at Deland on April 21 and 22, 1908, had nearly half of the whitefly larvae on them infected and dead by the middle of the following June. Other trees treated in the same way and with the same fungus at New Smyrna on Nov. 29, 1907, showed similar results by the twenty-first of August this year. Other experiments have not been equally successful. In some instances the causes of failure are not well understood; in others it was doubtless due to the extreme drouth. There are, however, only one or two instances in which the writer failed to get any growth of fungus at all, when good fresh material was used between the dates of April 21 and November 26.

It is at those times when the larvae are young (first, second and third stages) and abundant, that the fungus can be most readily started. For some time past young larvae of the first, second and third stages have been abundant in the whitefly-infested trees, and they will continue to be more or less abundant until about the end of November. It should, therefore, be an easy matter to start a growth of fungus now. Fungus can be introduced at any time from about April till November; except perhaps during a brief period in May or June, just before the issuing of the second brood of adult whiteflies. At that period so many of the larvae would be in the fourth and fifth stages, when they appear to be immune to infection by fungus, that little success might be attained. December, January, February and March are not favorable for the introduction of fungus, probably because the larvae of the whitefly are then almost in the fourth or fifth stages.

Use fungus which is well matured. This should be either of a bright red or a bright lemon-yellow color, according as it is the red or yellow species which is taken. Since much of the summer's growth of fungus frequently becomes weathered or drops from the trees before the following spring, it is believed to be best to use plenty of it now, and if it is available, to introduce more next spring. Rains immediately following introductions of fungus appear to be conducive to wards getting a good growth; but it is not necessary to wait for rain when spraying.

Cut down the chinaberry, umbrella tree, and other food plants of whitefly (see Bulletin 88), and so stop the infestation by these.

The fact that the citrus whitefly of Florida represents two distinct and easily distinguished species has only recently been established by the writer. This discovery is important, since it appears that the yellow Aschersonia will not thrive upon the species A, which has smooth and generally light-colored eggs, pupa cases which do not collapse when empty, and adults with unmarked white wings. The yellow Aschersonia appears to thrive only upon the other species B, which has rough eggs, covered with a microscopic network of six-sided meshes, and generally dark or black. The pupa cases collapse when empty, and the edges of the slit through which the adult emerged become more or less folded inward into the empty case. The adults have white wings with a smoky-colored area visible toward the end of each forewing, when these are viewed as they lie folded on the back of the insect. These distinctive characters can be made out by the use of the hand magnifier. The

red Aschersonia and the brown fungus are known to thrive on species A, but will also grow, to some extent at least, on species B.

If there is any doubt in regard to which species is present, send specimens to the Experiment Station for identification. It is important to know which species is being dealt with, in order to know which fungus to use.

For more detailed information write to the Experiment Station at Gainesville for bulletin 88, and for press bulletins 80, 82 and 88.

M. B. AULTMAN JOINS RANKS OF THE BENEDICTS.

Was Married to Miss Cora B. Laughrey, on Thursday, September, 17.

The marriage of Murray B. Aultman, of Daytona, to Miss Cora B. Laughrey, of Dawson, Pa., was solemnized Thursday, Sept. 17th at the home of the bride's sister, Mrs. Earle G. Miller, at Waynesburg, Pa. Rev. T. J. Edwards, of the First Baptist Church, of Knoxville, officiating.

The ceremony was performed at nine o'clock, after which a beautifully appointed wedding breakfast was served. Immediately after the ceremony the bride and groom left on a tour of the New England states. The groom, Mr. Aultman, is one of Daytona's popular business men and is well and favorably known here. The bride, Miss Laughrey, is the daughter of the late Joseph R. Laughrey, of Dawson, Pa. She has spent several seasons in Daytona and is very popular in society circles here.

Mr and Mrs. Aultman will be at home in their cosy home on South Ridgewood avenue, after November first.

Automobile Licenses.

Wonder if automobile owners of Daytona know that a person, other than the owner of a machine, must have a chauffeur's license before he is legally entitled to drive an automobile. An owner can take out a license as such which entitles him to drive his own machine, but how many who are driving for owners have their license? The license fee, payable to the Secretary of State, is \$2.00. The penalty for driving without it is a fine of \$100.

Will Enlarge Building.

S. W. Carroll has commenced work on the enlargement of his grocery store on the corner of Beach street and Second avenue. The building when completed will be 27x90, two stories high. The upper floor will be divided into twelve living rooms fitted with all modern conveniences and completely furnished.

The enlargement of the store room was made necessary by the increasing business of this popular house which has found the old room entirely too small.

Died at Marblehead, Conn.

E. M. Watson, who spent last winter in the Allen cottage on South Palmetto avenue, and whose family have been guests of Schmidt's Villa for the past twelve or fourteen seasons, died September 12. Mr. Watson was very low all last winter while here and few expected him to last through the winter. The following from the American Press gives the particulars:

E. M. Watson, of Jersey City, died Sept. 12 of a complication of diseases at his summer home at Marblehead, Conn., where he was born sixty-two years ago. He was for many years in charge of the job department of the Jersey City Evening Journal. In 1881 he was made superintendent of the Jersey City Printing company, formed by the late Major Z. K. Pangborn and Joseph A. Dear, and upon the death of Major Pangborn, six years ago, he became president of the company.

Just received fall and winter samples. If we have not made you a suit give us a trial—and you will not only be satisfied but will be patronizing a home industry.

BURNETT, The Tailor.

DAYTONA PUBLIC SCHOOLS

OPEN VERY AUSPICIOUSLY.

Thirteen Teachers Are Now Employed in the High and Public Schools.

Vacation Done; Vexation Begun.

There was a scene of bustle and activity at the school house on Monday morning when the hundreds of pupils of the Daytona graded and high schools gathered for the opening of school after the long summer vacation.

The school opened auspiciously and bids fair to prove a very successful term. The enrollment on Monday was 214. This number will be added to largely later in the season as the winter residents come.

The teachers, all of whom were present Monday morning, are the best that could be secured. Many of them are no strangers to Daytona pupils, having taught here before. The corps of teachers is as follows:

Prof. I. L. Wright—Principal.
Miss Margaret Fuller—Assistant Principal.
Miss Clara Wilkinson—Latin Teacher.
Miss Jennie Morrell—Eighth grade.
Mrs. I. M. Mabbette—Seventh grade.
Miss Clara Griffin—Sixth grade.
Miss Minnie Carew—Fifth grade.
Miss May Mabbette—Fourth grade.
Miss Eva Jackson—Third grade.
Miss Emma Athorp—Second grade.
Miss Lucie Haacker—First grade.
Mrs. Belle Abbott Haines—Kindergarten.
Miss Hazel Stiling—Assistant Kindergarten.

J. W. Ball Admitted to Bail.

Friday of last week Attorneys E. F. Oates and Cary D. Landis appeared before Judge Jones at Fort Pierce and argued a motion to admit J. W. Ball, charged with rape, to bail. On the showing made, bail was granted in the sum of \$1,000 and Mr. Ball was released Sunday.

An Exceptional Honor.

The president has just ordered that one of the new torpedo boat destroyers be named the "Francis A. Roe," after the late Rear Admiral Roe, United States Navy, who was the father of Col. Roe, United States Army, of Port Orange. Only officers who have been greatly distinguished in battle, are thus exceptionally honored.

Good Road Work.

The street committee of the City Council is doing a good piece of road work on the north end of Beach street. Coarse stone is first put on, then a heavy layer of egg-size stone over this which is rolled with a steam roller, after which a coating of fine stone is placed on top and again rolled. This will make Beach street from Fairview to First avenue the best stretch of road in the city.

The Halifax Music House

Wishes to announce to the musical public that it gives more for the money in piano values than any other house in the State. If you want your piano put in the best of order, my services are at your disposal. In addition to my factory education I have had forty years continuous practice. The many testimonials and boquets tendered me make it difficult to keep in check an attack of the swelled head. You may say this is pretty heavy talk, but I can "deliver the goods." The stock of pianos on my floor will prove my claim. You will find my stock harmonically correct and mechanically perfect. All are cordially invited to inspect my stock particularly Mayor Seaman, as I hold documentary evidence in which he claims to be something of a judge of fine piano work. Bring your pianist who will find that only pure tones will eventuate, resultant to skilful touch upon the resourceful clavier.

GEO. WRAY.
