N. W. Moxley, chairman; J. J. Jones, secy. and C. B. Spooner, treas.

As soon as the club is organized and a charter granted, regular officers will be elected.

One Subscriber Appreciates Paper

One of our subscribers expresses himself very emphatically in a letter which we print in part, thanking him for his co-operation: "The Coolidge Examiner Coolidge, Arizona.

"I am enclosing money order to cover subscription to The Coolidge Examiner. Some people can not understand WHY it costs money to publish a newspaper but this is not surprising since many people understand next to nothing. The greatest curse in the World is still ignorance, and strange but true, much of this ignorance comes from those reputed to be learned in book lore. Some time, we may enjoy More's Utopia but that would not work either because there would be no need for newspapers and lawyers. Guess we better forget about this Utopia. In truth, we are a Hell of a distance from it now. I send my regards to The Examiner and may you continue to grow."

Notice of 2nd Apportionment of Stored and Pumped Water

The first apportionment of stored and pumped water for lands on the San Carlos Project for the Calendar Year 1939 was made by the Commissioner of Indian Affairs and approved by the Secretary of the Interior on January 25, 1939, to the amount of 1.013 ac. ft. per acre. This was based on the amount of 4,310 ac. ft. in the San Carlos Reservoir on January 1, 1939, and the making available of 100,000 ac. ft. from the pumps operated in project irrigation wells, or a total of 104,310 ac. ft. It was estimated that 3,000 ac. ft. of water will be required for Federal and State agencies, Municipalities and schools, so that under the first apportionment a net of 101,310 ac. ft. of water was available at source of supply and subject to transportation and evaporation losses.

Since that time an additional amount of 25,570 ac. ft. of water came into San Carlos Reservoir so that it reached its maximum storage capacity so far during the present season of 29,880 ac. ft. on April 11th. A new apportionment of this increase is hereby made to the 100,000 acres of land within the project and at the rate of .2557 ac. ft. per acre measured at the source of supply.

This makes the total apportionment for the Calendar Year 1939 to date of 1.2687 ac. ft. per acre measured at the source of supply and subject to evaporation and transportation losses.

In order that the land owners may know what to expect as to the amount of water which may be delivered to their lands out of the total amount at source of supply, it is estimated that 1.0 ac. ft. per acre will be available at the farm.

This order applies to all lands under constructed ditches ready for irrigation, and the stored and the pumped water shall be delivered in the same proportion per acre to each acre cultivated in so far as the physical conditions permit, and shall be subject to the basic charges and per acre limitations provided in the order authorizing the assessment of operation and maintenance charges against the lands of the project. The delivery of pumped water as herein apportioned will necessarily be limited each day to the ability of the project to supply power for the operation of the pumping plants, also to the ability of the lands to make proper use of the water from the wells which can be operated.

It is possible that additional water will reach the San Carlos Reservoir and become available for apportionment later in the season of 1939, and in that event the project landowners will be duly notified in advance of any additional apportionments.
