The City of Lakeland Delinquent Tax List For 1921

Below will be listed all the delinquent taxes of the City of Lakeland for 1921. Some few of these may have been paid since the list was prepared and in that event the owner will of course know of same. In order to be sure that every one has a fair chance to pay his tax before they are sued and a great deal of costs is added, we are having this list published and if these taxes are paid on or before the 31st day of August, A. D. 1922, only advertising costs and ten per cent will be added. These taxes have been ordered turned-over to the City Attorney and they would be entitled to a collection fee but at this period of time parties whose taxes are definquent will be allowed to go ahead and pay same to the City Tax Collector at the City Hall with only the costs of advertising and the 10 per cent added. Immediately after August 31st, suit will be filed on all unpaid taxes.

ordered turned over to the Ci- collection fee but at this perio will be allowed to go ahead a City Hall with only the costs Immediately after August 31st This is done by order of the	ty Attorney d of time pa and pay same of advertis , suit will b	and they would be rties whose taxes to the City Tax C ing and the 10 pe e filed on all unpa	are definquent collector at the er cent added.

72.00 A Growth Shown By This Firm—First To Pasteurize Milk In Lakeland

24.00
One year ago the Polk County Dairy
Company opened their plant and offered their products, Pasteurized Milk,
"Purity Maid" ice cream and other
dairy products to the public.
The company is an organization of
local people many of whom were in
the dairy business, and felt that it
would be better to handle their milk
through a central plant, giving the
people a more sanitary food and bet-

14.40
8.40 would be better to handle their milk
4.80
8.40 through a central plant, giving the
people a more sanitary food and better service as well as creating an
outlet for their surplus milk in the
form of ice cream.

This was the first pasteurized milk
ever offered for sale in Lakeland and

What pasteurization means and the origin of the term. Copied from the Circular No. 184 of the Department of Agriculture, Bureau of Animal Industry, Washington, D. C.
Pasteurization, as anylied to milk

dustry Washington, D. C.

"Pasteurization as applied to milk is the process of heating for a long or short period as the different methods demand at temperatures usually between 140 and 185 F. The process must be followed by rapid cooling. the term originated from the experiments of Pasteur, in France, from 1860 to 1864, on the 'diseases' of wine, in which he found that heating for a few moments at a temperature of 122 to 140 F. was sufficient to prevent abnormal fermentations and souring of the wine. A little later Pasteur found that by a similar heating beer |could be preserved from souring. The application of the process gave rise to the term "pasteurization."

36.00
8.40
The value of pasteurization from a sanitary standpoint is of the greatest importance when market milk is under consideration.

13.40 consideration.

12.00 In the first place, the pasteurization of milk, when the process is properly performed, affords protection from pathogenic organisms. Such disease-producing bacteria as Bacillus Tuberculosis, B. Typhi., B. Diphtherioe, and the dysentery bacillus are destroyed, or at least have lost their ability to produce diseases, when heated at 140 F. for twenty minutes or more. Although the infective agent in scarlet fever is unknown, epidemics of the disease have been traced to milk supplies, and in such cases pasteurization has been reported as a means of safe-guarding the public, with apparently satisfactory results.

the ultimate souring of milk, although it does delay the process.

In this plant modern equipment and methods are used. The milk is first strained through many thicknesses of absorbent cotton after which it is handled entirely by machinery, carried through sanitary tubes by regular sanitary milk pumps and bottled and capped automatically; even the little cap on the bottle is made and sealed in a tube at a factory and is never touched by human hand.

Milk is received at this plant twice each day and what is not sold as

36.00 cach day and what is not sold as fresh milk one day is not used the next but goes to the ice cream department.

Special care is taken as to the clean liness of the plant and each time that

24.00 all leading drug stores.

Of course the daily sales were small at first but long before the first year had rolled around they had grown to a very substantial figure and it is now being shipped as far north as Ocala and as far south as Fort Myers and Bradentown as well as to intermediate points.

"Purity Maid" ice cream is very

"Purity Maid" ice cream is very rich in butter fat and other milk solids, a special effort being made to blend these with pure granulated sugar, high grade vanilla and good ripe fruit in the right proportion to make a dessert that is also an excellent food.

The entire "mix" is run through (Continued on Page 6)
